Subject: "2/2/16 BOARD MEETING (Conservation Extension program)

To Whom it may concern!

I understand that on 2/2/16 there will be a board meeting to evaluate and decide on the possibility to extend a mandatory water usage restriction in California; as I understand the restrictions for the water district that serves my home will be of 33% compared to 2013.

I understand the caution in extending the 2015 water reduction program but I also understand that the condition under which that decision was taken were completely different from the current and forecasted weather conditions. Our snow pack is above 100%, the rain fall has been steady and Folsom lake level has increased by more than 30 feet only in the last 6 weeks.

I'm against taking a decision in February about this and suggest to postpone such a decision to the middle of Spring, so that you would have 10 more weeks of rain and snow fall history and you will be able to take a much more educated decision.

I hope you will consider my input and delay such critical decision.

Best regards,

Giorgio Dina
