Subject: Evaluation of Water Conservation Requirement

Hello. I am a residential customer of the San Juan Water District. I heard that a 33 percent conservation requirement is going to be considered again in early February. I feel it is much too early to do this kind of analysis given the fact that we do not yet know what kind of snow and rain will be available. As such, I'm asking that the reevaluation be delayed until April when the water supply conditions will be better known. Thank you.
