Subject: 2/2/16 Board Meeting (Conservation Extended Emergency Regulation)

To whom it may concern:

It was recently brought to my attention that the SWRCB will be meeting shortly to vote on the possible extension of conservation regulations for customers of the various water districts in California.

While I am well aware that the recent rain and snow does not constitute the end to our multi-year drought, I would nevertheless implore the board to at least consider monthly evaluations of the current water conditions throughout the spring of this year.

The current level of water restrictions, if held throughout the summer, will exacerbate the already stressed landscape conditions that resulted from under watering all last summer. If reasonable easing of the restrictions (based on real world conditions) are evaluated, the residents of the state could be saved millions of dollars in further damage to landscapes.

I have personally implemented every recommendation for water system changes on my property, but these changes do not in and of themselves, result in the necessary 33% savings.

While I believe we should always be vigilant in taking care of our precious water supply, I ask you to please be prudent in your decisions and consider the monetary impact to the residents of your state.

Thank you for your overall efforts in managing this difficult situation.

Regards, William Conner

CC: San Juan Water District
