What's not legal? I think we have conflicting reports on contamination. Are you looking at the same reports I am? I saw a report that showed nitrate levels getting lower in recent years and that they were close to the border of acceptable. Then on the golf course where they use grey water and where a faulty sewer was installed there are high levels of nitrates altering the average. (Which is being used deceptively against people like us trying to get a good solution for the town)...

I'm sorry but your response does not reassure me at all knowing what I know about this current project and the loads of crap that will be hauled to Santa Maria, the State water that will need to be imported, the Broderson site that will be inundated with water and on and on and on....

I am sorry but I am looking for representation with actual data, not some fabricated unsubstantiated BS.

Sorry but I am disappointed and with you in charge I won't be sleeping well. Luckily there are others out there who may start doing something to help us and not fight the flow and the main populous of Los Osos.

Katie Franklin

Ms. Franklin,

I don't see stopping the solution as progress. Going to another site is going backwards, as that will take years while costs escalate. The ensuing "vision" includes years of continued groundwater contamination, continued seeping of fecal coliform bacteria from human sources into the National and State Estuary, and continued health threats from surfacing septic tank effluent during wet weather in which the children of Los Osos will play. That's not what I call a "pure vision," nor what's best for the community or the water. It's also not legal, hence my enforcement action, as I promised the District if they chose to delay.

Dear Mr. Roger Briggs;

We just had an election in Los Osos and the people finally have guidelines to get somewhere with this thing. Are you supporting this progress and election?

Please note we are asking for help from others to make sure our laws

are upheld and that we are assisted in our democratic process and that no one is allowed to ignore legal procedures as seems to be happening with our funds at this point.

Everyone is trying to work together at this point in a positive direction...not a backwards one. Please be supportive and heed the will of the current democratically elected CSD. This CSD was elected with a fraction of the funds the opposition had. Think about the accomplishment this is! I hope you are proud of the people of Los Osos and the huge monumental effort this has been at the grassroots level with completely donated time and money by the volunteers. We are all in this together. Let's make this little town of Los Osos a beautiful haven for the future of California. We have a vision. This vision is pure and it is not a compromise. We have a vision that does not compromise our people, the estuary, the water supply and the endangered species. This is a pure vision. Let's all stand behind the vision that is best for the whole community.

Thank you.

Katie Franklin
