Would you forward this to the correct authority?

Concerning the basin plan update.

Federal and state clean water acts requires and encourages a water recycle element for new waste water facilities as part of the requirement for using federal money (SRF) allocated to the State (Administrator). Would it be possible to add language to the basin plan update that would compel the Lead Agency of a waste water project to have a waste water recycle element as part of the project.

Please see attached files.

I believe these codes are just the tip of the iceberg for the requirement of any waste water project to have a water re-use element as part of the project.
