Subject: Water Conservation

Dear Jeanine Townsend

A few weeks ago, I read in the Roseville Press Tribune that the San Juan Water District in Granite Bay had decided, on their own, to reduce their water savings from the Governor's mandate of 36% to 10%. Their rationale was that there was more water in Folsom Lake.

I find this very upsetting since several areas besides Granite Bay rely on the Folsom Lake water, Roseville being one.

Also, just because we were lucky enough to get some water this year does not mean we should not conserve. With climate change and increased population in our area, we should assume that we will be in drought-like conditions from here on out.

I firmly believe that we should continue our water conservation efforts indefinitely.

Sincerely, Sandy Pattison
