

Dear Ms. Townsend,

I have been a resident (vacations) at Tahoe Keys for 18 years. When I purchased our home, the water behind the house was nearly clear and I could fish for trout. It was an important reason for purchasing the house. As you know, the water is now full of weeds in spite of tremendous efforts on the part of our homeowners association. Of course, if the water was restored to a better condition, home values would improve and all concerned would be much happier.

Many ideas have been tried to rid the water of the weeds. Apparently, none have been very successful. With careful planning and good controls, it seems that the use of a pesticide would do the trick. Please let the proper authorities try to rid the water of these terrible weeds by using a controlled pesticide.

Thank you for your consideration.
