Subject: Lanthanum Modified Clay Application Plan (LMCAP)

Dear Mr. Plaziak,

The Tahoe Keys Property Owners Association (TKPOA) herewith submits the enclosed Lanthanum Modified Clay Application Plan (LMCAP). This LMCAP complies with the Lahontan Water Resource Control Board's approval of the Tahoe Keys Control Methods Test (CMT or Project) and NPDES Order No. CA6202201 WDID 6A91701001 (NPDES Permit), which occurred January 13, 2022.

Per NPDES Permit Section VII, Lanthanum Modified Clay Use Requirements, B. Lanthanum Modified Clay Application Plan (LMCAP), TKPOA must submit an LMCAP for the application of Lanthanum Modified Clay if it is utilized as a HAB and total phosphorus control.

On behalf of the TKPOA's Water Quality Committee, Board of Directors, and Association members, we appreciate your timely attention and processing of this LMCAP. We continue to look forward to the opportunity of implementing the CMT Test this spring (Spring 2022) to gather time-critical information on possible effective methods for controlling aquatic invasive plants.

Sincerely,

Kirk J. Wooldridge PCAM®, AMS®, CMCA®, CCAM®, CHA®
