~~August 15, 2024~~

Revised October 17, 2024

Santa Ana Regional Water Quality Control Board  
Tentative Triennial Review Priority Lists and Work Plan – Fiscal Years 2024-2027  
Response to Comments

## INTRODUCTION

This report contains the Santa Ana Regional Water Quality Control Board (Santa Ana Water Board) staff responses to written comments received on the Triennial Review High-Priority and Medium-Priority Lists and Work Plan for the 2024-2027 Triennial Review of the [Water Quality Control Plan for the Santa Ana River Basin](#) (Basin Plan). **Comments may be shortened or paraphrased. Copies of each comment letter will be provided to the Board members prior to their consideration of the final Triennial Review Resolution.**

Santa Ana Water Board staff released a draft High-Priority and Medium-Priority List and Work Plan for public and tribal comment on March 29, 2024. The 30-day public comment period extended from March 29, 2024, to April 29, 2024. During the comment period, the Santa Ana Water Board received three (3) comment letters from interested **stakeholders persons: the United States Environmental Protection Agency, Riverside County Flood Control and Water Conservation District, and Orange County Public Works. During the 45-day public comment period which ended on September 30, 2024, Santa Ana Water Board staff received one comment letter from the County of Orange and Orange County Flood Control in conjunction with cities within Orange County. Comments may be shortened or paraphrased. Copies of each comment letter will be provided to the Board members prior to their consideration of the final Triennial Review Resolution.**

**The initial responses to comments received during the March-April 2024 comment period was released to the public on August 15, 2024. This revised document now includes response to comments received on September 30, 2024. In addition, the revised document includes clerical, editorial, and clarifying changes, provides current projected dates, and removes certain information that staff determined on further review was beyond the scope of the triennial review.**

**Revision to the response to comments released on August 15, 2024, are shown in bold and in strikeout or underline.**

**Comment letter number 4, received on September 30, 2024, and responses thereto are not shown in bold and strikeout or underline.**

 Response to Comments

**List of Commenters:**

1	United States Environmental Protection Agency (USEPA)
2	Riverside County Flood Control and Water Conservation District (District)
3	Orange County Public Works (OCPW)
4	County of Orange and Orange County Flood Control (collectively County)

No.	Commenter	Comment	Response
1.1	USEPA	EPA fully supports Project 8 in the High Priority List, “Designation of the Commercial of the Commercial and Sport Fishing Beneficial Use”.	Comment noted. Santa Ana Water Board staff continues to recommend this project as a high priority.
1.2	USEPA	It is EPA’s understanding that the State originally included recreational/sport fishing for consumption in freshwaters as part of the REC-1 use, while commercial and recreational/sport fishing for consumption in marine waters was included in the COMM use. However, in 1990s, the State clarified its definition of COMM to include commercial and recreational/sport fishing for consumption in both fresh and marine waters, while the REC-1 use would only include recreational fishing (not for consumption). This required Regional Boards to fill a gap for REC-1 designated freshwaters, and add the COMM use to these waters, to ensure that the designated	<p>The 1995 Water Quality Control Plan for the Santa Ana River Basin (Basin Plan) designated all ocean waters and most bays and estuaries with the Commercial and Sport Fishing (COMM) beneficial use and these marine waters remain designated with the COMM use.</p> <p>In 2017, the Santa Ana Water Board adopted the Basin Plan Amendment “<i>Revised Compliance Schedule for Shellfish, Newport Bay Watershed, Orange County</i>”, which approved the COMM designation for several of the Region’s freshwater lakes and reservoirs.</p>

Tentative Triennial Review Priority Lists and Work Plan – Fiscal Years 2024-2027  
Response to Comments

No.	Commenter	Comment	Response
		use for recreational/sport fishing for consumption continued to be covered.	
1.3	USEPA	It is our understanding that the COMM use has not been added to some REC-1 waters where recreational/sport fishing for consumption had been a previously designated use. It is important that the Regional Board review all waterbody designations and add the COMM use to all waters that should be protected for recreational/sport fishing for consumption.	Project No. 8 Designation of the COMM Beneficial Use, proposes to designate the COMM beneficial use to several lakes and streams where there is a sufficient information to demonstrate that the use is existing or is a potential use.
1.4	USEPA	Since recreational/sport fishing for consumption is a CWA section 101(a)(2) use, if not designated, a use attainability analysis is required (if not already completed and the use removal/exclusion approved). If the waterbody has an existing fishable (for consumption) use, even if not designated, the use cannot be removed (see 40 CFR 131.10 et seq.).	<p>Many inland waters designated with the water contact recreation (REC-1) beneficial use in the Basin Plan are intermittent, ephemeral, and/or have low flow conditions that prevent the attainment of the COMM use. Additionally, diversions or other types of modifications (e.g., flood control) preclude the attainment of the COMM use, and it is not feasible to restore the water body that will result in the attainment.</p> <p>As part of Project No. 8, Santa Ana Water Board staff will investigate and explain what evidence was used to decide whether to designate or not the COMM beneficial use.</p>
1.5	USEPA	On April 16, 2024, EPA received the Regional Board’s report, <i>Santa Ana Regional Water Quality Control Board UAA</i>	Comment noted.

Santa Ana Regional Water Quality Control Board

Response to Comments

No.	Commenter	Comment	Response
		<p><i>Reexamination.</i> This report appears to satisfy EPA’s regulation at 40 CFR §131.20(a) that requires states to “re-examine any waterbody segment with water quality standards that do not include the uses specified in section 101(a)(2) of the [Clean Water] Act every three years to determine if any new information has become available” and if the uses are attainable, requires the state to revise its standards accordingly. This requirement applies to waters for which the Regional Board has conducted a Use Attainability Analysis (UAA) to justify removing or excluding an aquatic life use, or a fishable or swimmable use such as COMM and REC-1, and to other waters that do not have assigned CWA section 101(a)(2) uses...</p>	
1.6	USEPA	EPA appreciates receiving this report and will review and provide comments to Regional Board staff shortly.	Comment noted.
1.7	USEPA	The Regional Board discussed this requirement in the Medium Priority List (Project 4) and indicated staff intends to complete another review for the next Triennial Review period. EPA appreciates the Board’s commitment and considers this a high priority project.	The UAA reexamination is not a Basin Plan amendment project, rather a Basin Planning activity. Based on the triennial review criteria developed, Santa Ana Water Board staff do not recommend elevating to a high priority. However, staff will initiate the reexamination of the UAA waters during the triennial review

			period and plan to submit our findings and determination to the USEPA.
1.8	USEPA	<p>EPA’s regulation at 40 CFR §131.20(a) requires states to consider adopting EPA’s new or revised recommended CWA section 304(a) water quality criteria, and if not provide an explanation. The regulation says, “if a state does not adopt new or revised criteria for parameters for which EPA has published new or updated CWA section 304(a) criteria recommendations, then the state shall provide an explanation when it submits the results of its triennial review”.</p> <p>The Regional Board discusses this requirement in the Medium Priority List (Project 8), and notes that the State Water Board has not adopted these criteria for statewide use. Project 8 lists several specific parameters that the Regional Board will consider for adoption within the Region, including ammonia. EPA appreciates this commitment and considers this project to be a high priority.</p>	<p>Comment noted.</p> <p>As noted in Project 8: Consider Adopting Clean Water Act Section 304(a) Recommended Criteria description for the Medium-Priority List, the adoption of Clean Water Act 304(a) criteria may be more efficiently accomplished by the State Water Resources Control Board (State Water Board) as the criteria are of statewide importance. Currently, the State Water Board is considering statewide water quality objectives for bio stimulation, cyanotoxins, and biological conditions. In addition, the State Water Board recently directed the Division of Drinking Water to prioritize the development of drinking water regulations during calendar year 2024 for several parameters including hexavalent chromium, perfluoro-octanoic acid and perfluoro-octane sulfonic acid (collectively PFAS), cadmium, and mercury. Under such circumstances, Project 8 is appropriately placed on the Medium-Priority List.</p>
1.9	USEPA	In addition, if site-specific conditions exist that would warrant adoption of a new or revised parameter on a waterbody-specific basis, EPA expects that the adoption of that	Santa Ana Water Board staff will incorporate all approved Statewide criteria as necessary to the Basin Plan. Where appropriate Santa Ana Water Board staff will incorporate

		parameter be considered during this triennial review. EPA considers this a high priority for the current Triennial Review.	304(a) recommended criteria into TMDLs and permits.
2.1	District	The Riverside County Flood Control and Water Conservation District (District) welcomes the opportunity to participate in this important effort to help the Santa Ana Regional Water Quality Control Board (Regional Board) set <i>Water Quality Control Plan for the Santa Ana River Basin</i> (Basin Plan) work priorities for the next three years. The Basin Plan is the foundational document for water quality protection in the region and the number of High and Medium Priority projects identified reflects the significant backlog of work needed to update this document. The District appreciates the commitment by the Regional Board to engage stakeholders in the Triennial Review process and sharing the preliminary list of priority basin planning projects.	Comment noted.
2.2	District	The District has reviewed the draft Triennial Review Priority List for Fiscal Years 2024–2027 and the High Priority and Medium Priority Project Descriptions. The District does not have assigned waste load allocations and is not listed on any Total Maximum Daily Loads (TMDL); however, in the Principal Permittee role, the District	Comment noted. Santa Ana Water Board staff acknowledge the District’s engagement with several of the triennial review projects.

		<p>provides technical guidance to the Municipal Separate Storm Sewer System (MS4) Permittees who are listed on the TMDLs. Several of the projects in the preliminary lists have been ongoing for several years. The District is actively engaging with the Regional Board and stakeholders on several of these projects, including the Basin Plan Amendment to Revise the Lake Elsinore and Canyon Lake Nutrient TMDLs (High Priority Project #2) and the Basin Plan Amendment for the Wet Winter Conditions Compliance Date Extension for the MSAR Watershed TMDLs (High Priority Project #3). While the District is generally supportive of the priorities expressed by the Regional Board, we offer the following comments for consideration. Additional comments may be offered if the list is subsequently revised.</p>	
2.3	District	<p>Maintain the existing priority for Projects #2 and #3 on the High Priority List.</p>	<p>Comment noted. Santa Ana Water Board staff do not propose to change the existing priority for these projects.</p>
2.4	District	<p>The Santa Ana Watershed Project Authority (SAWPA) administers the Lake Elsinore and Canyon Lake TMDL Task Force, the Regional Water Quality Monitoring Task Force, and the Middle Santa Ana River (MSAR) Bacterial Indicators TMDL Task Force (Task Forces). In all of these Task</p>	<p>Comment noted. Santa Ana Water Board staff acknowledge the District’s engagement and collaboration with the various Task Forces.</p>

		<p>Forces, the District, the Riverside County MS4 Permittees, the Regional Board, and other watershed stakeholders work collaboratively to achieve water quality standards in the Santa Ana River Watershed.</p> <p>Through these Task Forces, watershed stakeholders have worked together to implement the respective TMDL's implementation plans, the Comprehensive Nutrient Reduction Plan and the Comprehensive Bacteria Reduction Plan.</p>	
2.5	District	<p>On June 18, 2015, SAWPA, on behalf of the Task Forces, submitted petitions to reopen and revise the Lake Elsinore/Canyon Lake Nutrient TMDLs and the MSAR Bacterial Indicators TMDL. In response to the letter on November 16, 2015, the Regional Board accepted the offer by the Task Forces to assist the Regional Board in revising the subject TMDLs.</p> <p>Considerable work has been done over the intervening years in a collaborative partnership with the Regional Board and these efforts have advanced substantially over the last Triennial Review period to a point where draft TMDL revision documents have been prepared. The District, on behalf</p>	<p>Comment noted.</p> <p>It is anticipated that the revised Basin Plan amendment for the Lake Elsinore and Canyon Lake TMDLs will be proposed to the Santa Ana Water Board for adoption in <b><u>December of 2024 the first quarter of 2025. Additionally, the Basin Plan amendment to extend the compliance date for the MSAR TMDL is tentatively scheduled for adoption by the Santa Ana Water Board in 2025.</u></b></p> <p>The estimated completion date for both Basin Plan amendments is the 2025-2026 fiscal year timeframe.</p>

Santa Ana Regional Water Quality Control Board

Response to Comments

No.	Commenter	Comment	Response
		of the MS4s listed on the TMDLs, supports placement of these projects near the top of the High Priority List. It is vital that Regional Board staff complete this work and bring the TMDL revisions to the Regional Board for approval in the coming year. The two-year completion date is also appropriate given the need to obtain approvals from the State Water Resources Control Board (SWRCB) and the Office of Administrative Law.	
2.6	District	Maintain the existing priority for the Basin Plan Amendment to Revise the Lake Elsinore and Canyon Lake Nutrient TMDLs (High Priority Project #2) and the Basin Plan Amendment for the Wet Winter Conditions Compliance Date Extension for the MSAR TMDLs (High Priority Project #3).	Comment noted. Santa Ana Water Board staff continue to recommend these projects as high priorities.
2.7	District	Move Project #7 under the Medium Priority List (Consider Revision of the Fecal Indicator Bacteria Objective for the MSAR TMDLs by Developing a Site-Specific Objective) into the High Priority List.	Santa Ana Water Board staff agrees that this issue is of regional and statewide importance. However, <b>in light of considering</b> the complexity of the issues, agency priorities, and availability of staff resources, the Santa Ana Water Board does not have the capacity to take the lead in developing site-specific objectives for the REC1 freshwater objective. The development of the site-specific objective is anticipated to take longer than this triennial review period. Thus, Santa Ana Water Board staff do not plan to elevate this project into

Response to Comments

No.	Commenter	Comment	Response
			the High-Priority List but will continue to recommend its placement on the Medium-Priority List to ensure that the project remains a priority over the longer term.
2.8	District	<p>As highlighted under Medium Priority Project #7, the MSAR TMDL Task Force has funded studies, reviewed recent research, and has considered the efforts of other Regional Boards and the SWRCB regarding the relationship between fecal indicator bacteria concentrations in Waters of the State and risk levels involved with water contact recreation. This project would consider whether a revised objective or a different bacteria indicator, such as HF183, should be adopted as a site-specific objective in order to more precisely assess risk and protect public health for water-contact recreation in the MSAR.</p> <p>Unfortunately, it is proposed as Project #7 on the Medium Priority List, meaning that it may not be initiated or completed until the 2027-2030 Triennial Review period or later. The District believes that this important project should be elevated onto the High Priority List.</p>	<p>Please see the response to comment 2.7. Santa Ana Water Board agrees this issue is of regional and statewide importance. However, <del>at this time</del> <b>currently</b>, Santa Ana Water Board staff do not recommend elevating this issue to the High-Priority List, <del>in light of</del> <b>considering</b> the complexity of the issue, need for data and additional research, and other agency priorities. Placement on the Medium-Priority List conveys the Santa Ana Water Board’s ongoing commitment to focusing on the project.</p> <p>Santa Ana Water Board staff will continue to closely monitor region and statewide research, and guidance from USEPA. Additionally, during the 2024-2027 triennial review period, Santa Ana Water Board staff will continue to work with the MSAR Task Force to continue to review data related to fecal indicator bacteria and consider the development of site-specific objectives for this TMDLs.</p>
2.9	District	The SWRCB, in collaboration with stakeholders, held a summit from	Comment noted.

Tentative Triennial Review Priority Lists and Work Plan – Fiscal Years 2024-2027  
Response to Comments

No.	Commenter	Comment	Response
		September 14-16, 2022, to initiate discussion on the challenges of achieving and attaining bacterial water quality objectives during both dry and wet weather. A follow-up summit is being planned for August 2024, which we encourage the Regional Board to attend.	Santa Ana Water Board staff participated in the September 2022 Bacteria Summit and will continue to participate as appropriate.
2.10	District	Concurrently, the United States Environmental Protection Agency (USEPA) has indicated it is developing technical support materials to assist efforts to develop site-specific criteria that is protective of recreational uses. Given all of this work being conducted to address bacteria throughout the State and country and given the compliance options provided to MS4 stakeholders under the Tentative Order, this project is critical for the Regional Board to consider escalating in priority.	Please see response to comments 2.7 and 2.8.
2.11	District	The Regional Board's MSAR Comprehensive Bacteria Reduction Plan Audit Report, dated October 2018, found that while "there is a benefit to updating the CBRP [Comprehensive Bacteria Reduction Plan]," Regional Board staff determined that "dedicating the MSAR Permittees' or Regional Board staff resources to updating the CBRP ahead of expected revisions of the Bacterial Indicator TMDL is not worthwhile when a further update would just	<b><u>Comment noted. Although circumstances have changed since 2018, Santa Ana Water Board staff continues to hold this view. The CBRP constitutes the water quality-based effluent limits in the MS4 permits. With the renewal of the MS4 permits, it is necessary to consider the CBRPs' function as a method of attaining the waste load allocations considering their effectiveness in protecting water quality so far and that the compliance</u></b>

Response to Comments

No.	Commenter	Comment	Response
		be needed after the TMDL revision is adopted."	<del>dates have passed or are imminent. This process will necessarily need to take place in conjunction with the MS4 renewal process, based on the Basin Plan.</del>
2.12	District	<p>The District is concerned that the Medium Priority status assigned to this project, with no allocation of personnel year (PYs) for the next three years, will further delay progress on identifying appropriate objectives for water contact recreation progress on the MSAR under dry weather conditions. Consequently, the District requests that this project be elevated from the Medium Priority List to the High Priority List and be assigned PYs in the 2024-2027 Triennial Review period. As noted below in Comment #4, there are opportunities for the Regional Board to reallocate PYs in order to assign this and potentially other Medium Priority projects as High Priority. The District, in collaboration with the Task Forces, would be willing to assist the Regional Board in completing this project.</p>	<p>Please see responses to comments 2.7 and 2.8.</p> <p>Santa Ana Water Board staff developed the Medium-Priority List for projects that are unlikely to be completed during this triennial review period due to other regional priorities, but that will continue to receive staff attention as capacity allows. Additionally, the triennial review projects are informed by various factors, including but not limited to Santa Ana Water Board’s stated priorities, <b>stakeholder interested persons’</b> input, resources, and in-progress projects. At this time, Santa Ana Water Board staff have not proposed a Basin Plan amendment for Project No. 7 to consider revision of the fecal indicator objective for the MSAR, after considering these factors, and in particular, in light of the complexity of the issues, need for evaluation of data, and further investigation; thus we do not anticipate elevating this project to the High-Priority List.</p>

Tentative Triennial Review Priority Lists and Work Plan – Fiscal Years 2024-2027  
Response to Comments

No.	Commenter	Comment	Response
2.13	District	The Regional Board should consider a project under the Medium Priority List to establish a plan or policy, or revise existing plans or policies, to facilitate the capture of urban runoff in the MSAR watershed.	The diversion of urban runoff to the sanitary sewer is a tool in controlling pollution. The implementation of these types of diversions in the MSAR watershed may be best incentivized through the Santa Ana Water Board’s stormwater (MS4) and wastewater program to develop a strategy to achieve this goal. The State Water Board has also developed its <a href="#">Strategy to Optimize Resource Management of Storm Water (STORMS)</a> that aligns with the commenter’s suggestion. <a href="#">Water Quality Order 2015-0075</a> additionally includes incentives to capture stormwater runoff from the 85 <sup>th</sup> percentile storm event to comply with receiving water limitations in MS4 permits. <b>Regulatory measures will be developed to be consistent with these efforts.</b> The development of a new, separate plan or policy in the Basin Plan <u>is</u> unnecessary considering existing regulatory tools, <b>and is largely redundant.</b>
2.14	District	During the Triennial Review's Scoping Meeting, held on January 31, 2024, the District verbally expressed concerns regarding the Riverside County MS4 Permittees' ability to divert runoff to the sanitary sewer for treatment and release to reduce potential bacterial loads coming from outfalls in the MSAR watershed. Through	Comment noted.

Santa Ana Regional Water Quality Control Board  
Tentative Triennial Review Priority Lists and Work Plan – Fiscal Years 2024-2027  
Response to Comments

No.	Commenter	Comment	Response
		<p>the completion of the Phoenix Avenue Low Flow Diversion Project on July 23, 2021, the District and the City of Riverside successfully implemented the first project of its kind throughout the Inland Empire to capture all dry weather flows and up to one cubic foot per second of wet weather runoff from a 601-acre catchment. This was possible in part because the City of Riverside owns and operates its own treatment plant. The District is continuing to invest, design, and construct similar projects where feasible to serve other MS4 Permittees who do not have their own treatment plants.</p>	
2.15	District	<p>The communities, such as Eastvale and portions of Jurupa Valley, are served by wastewater districts and other wastewater treatment operators (e.g. the Western Riverside County Regional Wastewater Authority [WRCRWA], administered by Western Municipal Water District [WMWD]), who are not responsible parties under the MSAR Bacterial Indicators TMDL. There are also site-specific needs required for a diversion, and therefore sewer diversion is not an option for every outfall.</p>	<p>Please see response to comment 2.13.</p> <p>Further analysis is required prior to determining if sewer diversions are not an option for every outfall.</p>
2.16	District	<p>Diversions of urban runoff to the sanitary sewer are an effective approach for meeting water quality compliance requirements,</p>	<p>The diversion of urban runoff to the sanitary sewer is a tool in controlling pollution.</p>

		protecting public health, and providing supplemental water for reuse.	
2.17	District	Diversions in the MSAR area, however, are constrained due to elevated total dissolved solids (TDS) levels (see Section 5 of the Basin Plan). Wastewater treatment system operators have been hesitant to treat diverted urban runoff due to elevated ambient TDS concentrations, removing a potentially powerful tool for water quality improvement.	<p><del>It would be helpful if the District would provide a detailed explanation of how TDS objectives are impacting the ability to divert and treat urban runoff in the MSAR Watershed. For example, data on TDS concentrations in urban runoff and proposed diversions would provide more clarity to Santa Ana Water Board staff. In addition, other pollutants, besides high concentrations of TDS, in the urban runoff waste stream are of concern. The runoff waste stream must be fully characterized and evaluated through the federal pretreatment program criteria as required under the NPDES permits issued by our Santa Ana Water Board.</del></p> <p><del>We suggest working with the Santa Ana Water Board wastewater program staff to determine a path forward on implementing urban runoff diversions along the Middle Santa Ana River.</del></p> <p><u>The Santa Ana Water Board will continue to work collaboratively with your agency and other appropriate wastewater agencies to discuss possible tangible solutions that will improve water quality</u></p>

			<b><u>in the watershed and support other benefits of capturing stormwater.</u></b>
2.18	District	The District therefore recommends adding a Medium Priority project to the Basin Plan's Triennial Review Work Plan to investigate these issues and encourage collaboration between wastewater treatment system operators and MS4s on the capture and treatment of urban runoff. This project would generally support local, regional, and state objectives to capture more stormwater. The initial work would require minimal Regional Board staff time since it would involve activities to identify the need for a new policy or policy changes to be developed in the next Triennial Review period and would thus be appropriate to be placed under the Medium Priority List.	Please see response to comment 2.14 <u>17</u> .
2.19	District	The Regional Board should be more transparent in the allocation of personnel years (PYs) to projects under the Triennial Review Priority Project Lists by breaking down the number of available PYs by fiscal year.	<b><del>It is difficult to accurately estimate the PYs necessary to complete each triennial review priority project per fiscal year since the scope and complexity of each project may change once it is undertaken. However,</del></b> Santa Ana Water Board did include the estimated total <b><u>person-years</u></b> (PYs) <b><del>anticipated</del></b> to complete each project as part of the High-Priority List Work Plan. <b><u>These PYs are estimated based on staffs' current</u></b>

Tentative Triennial Review Priority Lists and Work Plan – Fiscal Years 2024-2027  
Response to Comments

No.	Commenter	Comment	Response
		<p>Priority projects on the list are estimated to require a larger number of hours than would be required to accomplish them. For example, Projects 5 and 11 on the High Priority List workplan are administrative actions to incorporate previously approved statewide plans and policies into the Basin Plan and incorporate approved Regional Board amendments to the online Basin Plan. Together, they are assigned 1.5 PY over a three-year period. A more streamlined process to complete these actions with fewer PYs could potentially allow additional Medium Priority projects, such as the project noted above in Comment #2, to be initiated during the 2024-2027 review period and be assigned PYs.</p>	<p><del>In the past, PYs were underestimated so streamlining may not be feasible, but the Board continues to evaluate how to most efficiently and effectively complete its projects.</del></p>
3.0	OCPW	<p>The County of Orange and Orange and the County Flood Control District (collectively, “the County”) appreciate the opportunity to provide comments on the proposed <i>Triennial Review of the Water Quality Control Plan for the Santa Ana River Basin</i> for fiscal years 2024-2027.</p>	<p>Commented noted.</p>
3.1	OCPW	<p>The County participated in the Scoping meeting that was held on January 31, 2024, has reviewed the draft Triennial Review High and Medium Priority Lists and Project Descriptions, and is providing the following</p>	<p>Comment noted.</p>

		each fiscal year in order for the project to be completed. The County recommends that this information be outlined within the Draft Project Descriptions so that there is increased clarity and transparency regarding the effort necessary for each of the projects.	
3.87	OCPW	Given the limited Regional Water Board resources, projects that have the ability to leverage third party resources should be identified.	Santa Ana Water Board staff work collaboratively with TMDL task forces, County staff, USEPA and other resources agencies to assist with triennial review projects. The revised Triennial Review Work plan identifies anticipated <b>stakeholder interested person</b> /third party assistance.
3.98	OCPW	The Triennial Review Preliminary Priority List that was transmitted on January 25, 2024, included a column entitled <b>Stakeholder Assistance/ Program Staff</b> , which identified the various stakeholder groups that are directly involved in each project and may be able to provide resources to the Regional Water Board in order to complete the applicable project. However, it is unclear why that column is no longer included in the Draft Triennial Review High Priority List Workplan, distributed on March 29, 2024.	Santa Ana Water Board staff made the determination to remove the “Stakeholder Assistance/Programs Staff” column to assist with the use of the Work plan. However, due to comments received Santa Ana Water Board staff updated the Triennial Review Work plan to identify anticipated <b>stakeholder interested person</b> /third party assistance and program staff.
3.9	OCPW	The County is supportive of this information being included within the High Priority List	Please see response to comments 3.7 and 3.8.

Response to Comments

No.	Commenter	Comment	Response
		and recommends that the level and type of effort that may be provided by the stakeholders be further described for each project within the Draft Project Descriptions. Similar to <b>Comment #2</b> , this information will assist in identifying which projects have the highest chances of having significant work completed during the Triennial Review timeframe.	
3.10	OCPW	At the end of the Triennial Review period (2027), the high priority projects that were not completed from the current Priority List should be assessed to determine if they should remain on the next Triennial Review Priority List or removed. In addition, the medium priority projects should be re-assessed to determine if they should be elevated to the High Priority List.	Comment noted.  Santa Ana Water Board staff will reassess projects on the High- and Medium-Priority List when ranking the next triennial review priority projects.
3.11	OCPW	During each Triennial Review period, it seems as if each High Priority List is a stand-alone document that does not have any supporting rationale as to how it is related to the previous High Priority List. It is recommended that, during each Triennial Review period, that Regional Water Board staff assess the current status of the previous High and Medium Priority Lists to determine what projects should remain on the lists, which projects should no longer be on the lists, as well as what new projects	Please see response to comment 3.10.

			developed as part of <a href="#">STORMS</a> by the State Water Board.
3.23	OCPW	With the exception of the Newport Bay Watershed Selenium TMDLs, the other TMDLs adopted by the Regional Water Board within the North Central portion of Orange County are older and do not include clear compliance determination language. As a result, the compliance pathways included within the permits are often limiting and do not recognize a range of viable, potential pathways that could be included for each of the TMDLs. This project could define the range of potential compliance pathways (similar to what has been proposed by the Tri County Group as a part of the Santa Ana Region municipal regional stormwater permit renewal process) as well as an approach for determining which of the compliance pathways apply to each of the adopted TMDLs. This project would assist in addressing some of the regulatory and technical challenges in the older TMDLs until the resources are available to update them and provide much needed clarity for Santa Ana Board staff as well as the regulated entities.	Please see response to comment 3.23 <del>2</del> .  <b><del>Dischargers are responsible for complying with permits and other regulatory mechanisms (i.e. WDR, waivers, 401 certifications, etc.) that the Santa Ana Water Board uses to implement its Basin Plan. The Basin Plan should describe the general strategies that the Santa Ana Water Board will use in its regulatory mechanisms to attain load allocations and waste load allocations in its adopted TMDLs. General strategies include using allocations as numeric effluent limitations in permits or allowing the use of BMP-based effluent limitations before and after compliance dates, or some combination. “Compliance pathways” refers to the methods that permittees will use to demonstrate compliance with effluent limitations in permits or other regulatory mechanisms. At the same time, different regulatory mechanisms are influenced by factors other than the Basin Plan, such as federal and state regulations and policies and case law.</del></b>

		<p>Bay/San Diego Creek Watershed (Sediment TMDLs). These comments were developed in conjunction with the Cities of Brea, Irvine, La Habra, Newport Beach, Orange, Placentia, Seal Beach, Stanton, Tustin, Santa Ana, and Villa Park.</p>	
4.4	County	<p>The Sediment TMDL was adopted in 1998 (over 26 years ago) and is thus very outdated about the current scientific understanding, delistings, management needs, and the Statewide Non-Point Source Plan.</p> <p>When the Sediment TMDL was adopted, the Regional Board intended to reevaluate the effectiveness of the TMDL and update it as needed as a part of the Basin Planning Process – however this evaluation and update never occurred.</p>	<p>The Santa Ana Water Board adopted the Sediment TMDL on April 17, 1998, and USEPA approved it on April 16, 1999.</p> <p>The Santa Ana Water Board considers a variety of factors when evaluating the potential prioritization of projects during the triennial review process, including the protection of beneficial uses, complexity, water quality improvements, and staff resources. The Sediment TMDL has been effective and sediment loading has been significantly reduced since the adoption and continued implementation of the Sediment TMDL. Thus, while staff agrees that an update is appropriate, it doesn't justify selection as a high priority project when compared to other high priority projects that Santa Ana Water Board is currently undertaking. Santa Ana Water Board staff will continue to collaborate and continue discussions on scoping the revision of the Sediment TMDL and consider moving this TMDL to high priority in the future as resources allow.</p>

No.	Commenter	Comment	Response
			<p>Although the Sediment TMDL has not been updated, in 2019 and 2020, the Santa Ana Water Board approved changes and reductions to the Sediment TMDL Monitoring and Reporting Program to reflect updated sediment conditions.</p>
4.5	County	<p>A revision of the Sediment TMDL was previously noted as a Triennial Review high priority for the region (2019) but was not completed. The County has been requesting this revision to be completed for many years, and re-examining the Sediment TMDL is even more critical given that sediment is increasingly being viewed as a resource (instead of a pollutant) as it relates to mitigating future climate change impacts. While the County acknowledges and appreciates the changes and improvements approved by the Regional Board to the Sediment TMDL Monitoring and Reporting Program in 2019 and 2020, the lack of a revised TMDL remains a significant concern.</p>	<p>The Sediment TMDL was previously identified as a high priority during the 2019 triennial review. However, due to other competing priorities and limited available resources, staff were unable to initiate the re-examination during the triennial review period.</p> <p>Santa Ana Water Board staff acknowledges that the management of clean sediment as a resource for reuse is important (e.g., beach replenishment). As stated in the Medium Priority List descriptions, recent modeling conducted by the University of California, Irvine (UCI’s SedRise Project), indicates that a sediment deficit could occur in Upper Newport Bay sometime in the future because of sea level rise that may require allowing more sediment to enter the Upper Bay to assist salt marsh habitat to adapt to changing conditions. However, additional modeling is still needed to better understand and make sound scientific decisions on how sediment management measures may</p>

		<p><i>report is 30,892 tons/yr. Since load allocation targets have been met and the remaining major sources are largely dedicated open space areas, it is appropriate to manage the ongoing sediment input to Newport Bay under a nonpoint source approach.</i></p>	
4.11	County	<p>b) Consistent with <i>Item a)</i> above, the County is not requesting that the entirety of the Non-Point Source Plan be added to the Basin Plan. Rather, a paragraph similar to the following, as described in the High-Priority List, should be added to the List and Project Description.</p> <p><i>Non-Point Sources. Every five-years, the State Water Board reviews and updates the Nonpoint Source Program Implementation Plan. The Plan is prepared by the State Water Resources Control Board, the Regional Water Quality Control Boards, and the California Coastal Commission. The goal of the five-year plan is to present, in one place, the general goals and objectives for addressing nonpoint source pollution within the state. Key findings are incorporated within the Basin Plan, as needed.</i></p>	<p>The Santa Ana Water Board appreciates the clarification.</p> <p>Please see response to comment 4.10.</p>

4.12	County	<p>Move Medium Priority Project #2 [Review the Total Maximum Daily Loads for Sediment in the Newport Bay/San Diego Creek Watershed] to the High Priority Project List and update the project description. This project was previously included in the 2019 Basin Plan Triennial Review. This project should continue to be a high priority, especially since the 2020-2025 Non-Point Source Implementation Plan recognizes that sediment within the Newport Bay Watershed should be addressed as a non-point source.</p>	<p>Please see responses to comment 4.5.</p> <p>Santa Ana Water Board staff are willing to engage in discussions with the County regarding revisions to the Sediment TMDL. But, because of previous higher priority commitments for revising TMDLs for water bodies that have direct impacts to water contact recreational uses and as a result of resource constraints, Santa Ana Water Board staff do not recommend moving the Sediment TMDL to the current High Priority List.</p>
4.13	County	<p>County of Orange Clarification of Request Based on Response to Comments - September 30, 2024</p> <p>The County is concerned that the Basin Planning effort to update the 26-year-old Sediment TMDL continues to be delayed, despite the Regional Board’s acknowledgement (in 2019 and earlier) that this is a high priority and the TMDL needs to be updated to reflect the current program needs and progress made.</p> <p>The County has made previous attempts to engage Regional Board staff regarding the Sediment TMDL. Issues raised within the Response to Comments regarding the need</p>	<p>As noted in response to Comment 4.4 above, project priorities change over time and Santa Ana Water Board staff have committed the available resources to projects that have direct impacts on recreational uses and human and/or wildlife health.</p> <p>Although the overall goal of the Sediment TMDL has been achieved, additional information is still needed to understand and determine sediment-driven habitat change in the salt marsh. There is a need for a revised model for sediment transportation and deposition in Newport Bay. To determine</p>

		<p>for additional information about whether organochlorine compounds are associated with sediment flowing into Newport Bay, and how TMDL revisions could impact saltwater marsh habitat and sea-level rise, fall outside of the primary scope of the Sediment TMDL and should not be reasons for this project to be delayed.</p>	<p>potential changes in sediment management, including the effects of sea level rise, modeling that provides a more accurate picture of sediment movement throughout the Newport Bay Watershed, including the ability to vary sediment inputs over time, is essential. Without this tool, it will be difficult to determine when and why additional sediment inputs from fluvial sources may be needed to allow critical habitats in Newport Bay to adjust to sea level rise or other climatic or anthropogenic impacts.</p> <p>While sediment transport modeling is also useful for assessing pollutants associated with particulates, such as organochlorine compounds or other hydrophobic contaminants, the primary purpose of the model will be focused on sediment transport and flux under different management scenarios.</p> <p>The time needed to complete this additional modeling and research make it unlikely to complete the Sediment TMDL update within the three-year period.</p>
4.14	County	<p>In 2021-22, the County proactively identified a specific course of action that can be taken by the Regional Board to transition the Sediment TMDL to a maintenance level</p>	<p>Santa Ana Water Board staff are available to discuss the County’s proposed NPS Action Plan and revisions to the Sediment TMDL but cannot commit to a Basin Plan</p>

		<p>program consistent with the Non-Point Source Program and have drafted a presentation and an outline of a Non-Point Source Action Plan that could be used for this purpose. To this end, the County reached out to Regional Board staff in early 2022 to try to get a meeting scheduled to discuss this in greater detail. Although that meeting did not occur, the County has verbally shared the concepts for transitioning the Sediment TMDL to a maintenance level program with Regional Board staff.</p>	<p>amendment to revise the TMDL due to higher priority projects.</p>
4.15	County	<p>Instead of delaying this project further, the County is willing to support the Regional Board, as needed to ensure that this project remains a High Priority Project, and a specific course of action is outlined for its completion. Past cooperative efforts for the Sediment TMDL have been very productive and resulted in significant improvements for the overall management and monitoring of sediment in the Newport Bay Watershed.</p>	<p>We appreciate the County’s offer to support Santa Ana Water Board staff in revising the Sediment TMDL. However, given the complexities of sediment transport within Newport Bay and the need for better modeling and understanding of sediment flux and hydrodynamics that may result in shifts in habitat types and locations, staff do not expect to be able to complete this project within the three-year triennial review timeframe.</p> <p>See also response to comment 4.13.</p>
4.16	County	<p>Lastly, while the Regional Board has reduced the monitoring requirements and implementation measures, the fact remains that the Sediment TMDL continues to be</p>	<p>All discharges of pollutants that are collected or conveyed through a MS4 and discharged to a water of the United States are point source discharges subject to</p>

		<p>inappropriately incorporated into the municipal stormwater permit as a point source allocation (which it is not) and based on information and analyses that were conducted 26 years ago. Thus, it materially impacts and diverts resources from other County programs unnecessarily.</p>	<p>National Pollutant Discharge Elimination System (NPDES) permitting. The Sediment TMDL mischaracterized urban and construction stormwater as nonpoint source discharges. That will be addressed when the Sediment TMDL is revised. The TMDL revision will also consider load allocations for nonpoint source discharges. A “non-TMDL” approach to nonpoint source discharges (comment letter, p. 4) is inconsistent with the requirement to include load allocations in a TMDL for nonpoint sources. (40 C.F.R. 130.2(i).) The implementation of the current Sediment TMDL is beyond the scope of this triennial review and should be raised during applicable permit adoption proceedings.</p> <p>It should also be noted that the Permittees are currently meeting the sediment load allocation and the target for in-bay basin depths.</p>
