COMMENTS:

Storage Requirements. If forbearance period is May 15 - Oct 15, peak use in Aug is 1500 gallons a day, this does not mean daily use in May, June, early July is same. Calculating total storage based off peak month is wrong science and unduly creates a high storage requirement. This may even double the storage requirement unnecessarily. This could cost landowners large amounts of extra money and work.

2. All springs are 'Non Jurisdictional' and Wells-too. Seems over-reaching.

COMMENTS: In 2029 Humboldt Bay Municipal Water Dist water rights
expire for the Mad River. We are very concerned about
losing local control of the Mad River. How does the process
work and how do you determine who gets the water
rights after 2029? Could HBMWD's rights be extended
beyond 2029?

PLEASE PROVIDE CONTACT INFORMATION (IF DESIRED): 

COMMENTS:

1. It is important to allow people to maintain water diversions to supply household needs as we move through this process.
2. Almost no one in Humboldt County who uses surface water to supply SDU and cannabis irrigation uses even 5 acre feet of water per year. The 10 acre feet and 20 acre feet per year ~~set~~ thresholds are nearly irrelevant here.
3. It needs to be made clear that people can store water without being fined or otherwise penalized without an appropriate permit until your program is in place.
→ Great job today, thank-you!

COMMENTS: Need clear language on defining a "hydrologically connected groundwater diversion." In my opinion, in upland watersheds all ground water is hydro-connected to surface water. It should have a full forbearance period. There should be a certain percentage of ground water recharge required per ground water volume extracted by means of storm water infiltration through earthworks, forest management and road discharge + infiltration strategies.

COMMENTS:

Bladders are a very poor option for water storage,
We are working on numerous restoration sites that
had catastrophic failure of a bladder. I recommend not
permitting bladders.

- COMMENTS:  _____
- ① how are state agencies interfacing? If I apply for a water diversion to get a C.DFA license does this license mean that I'm in compliance (with) w/ other state agencies like DWR, Regional water quality, Fish & Wildlife, etc., or do I have to go to them separately.
- ② Is SWRCB including cultural uses under beneficial uses for water in streams or minimum flow levels?
- ③ What is the enforcement action for grows that reduce flows on fish bearing streams with substantial, verifiable impacts?

COMMENTS:

How do you propose to protect Tribal Water uses; Domestic, cultural, fisheries, wildlife & habitat when tribes are not required to register with the state? How will you protect those downstream/river tribal water users? In particular, off reservation cannabis growers who apply for water use ^{permits} in Yurok "High Country" off the Reservation that do not take into consideration the cumulative impacts to downstream tribal users who have used water since time immemorial.

COMMENTS: THE WATER MANAGEMENT PROGRAM FOR VITICULTURE
IN ARGENTINA, SPECIFICALLY MENDOZA, IS
INCREDIBLY WELL DESIGNED + EFFECTIVE TO
MANAGE A LIMITED WATER SOURCE.
THIS MAY BE A BENEFICIAL EXISTING
EXAMPLE TO BASE YOUR PROGRAM ON.

HOPE THIS HELPS! * HAS CONTACTS IN ARGENTINA

GRAPE VINES ARE THE PRIMARY CROP IN MENDOZA, ARGENTINA,
AND WATER IS LIMITED. THEIR PROGRAM WORKS WELL.

COMMENTS:

Springs and Wetlands that do not flow off property should
NOT BE Jurisdictional Water

Wells that are DEEP and not located near Surface H₂O
should NOT BE Jurisdictional Water

Installing Rain Water Storage should not need a
cumbersome permitting process and as well needs
to remain NON Jurisdictional Water

COMMENTS: * PRIORITIZE POND OVER BLANDERS + TANKS,
THEY CREATE HABITAT AVAILABLE FOR FIRE SUPPRESSION,
LESS PETROLEUM PRODUCTS IN WATERSHEDS, ETC.

* MORE CLARITY ON DOMESTIC STORAGE RELATED
TO WINTER PERIOD. DOMESTIC US. COMMERCIAL NEEDS
ARE A COMMON ISSUE WITH CULTIVATORS
