1

Please find attached a total of 60 comment letters on the 2012 Draft of the Industrial General Permit, submitted by members of San Francisco Baykeeper. These letters were submitted in response to a request for comments from the general public and generally contain identical text.

Thank you,

Ian Wren

Staff Scientist

Since each of the 60 letters are identical, refer to Commenter 82, Comments 2&3 for response to this comment letter.

2 **Message to the Board:**

I am writing to urge the State Water Board to update the Industrial General Stormwater Permit by adding clear and enforceable limits on pollution. Runoff from industrial facilities can contain heavy metals such as lead, zinc, and copper. These pollutants are highly toxic and endanger the health of California communities and watersheds. Unfortunately, after a revision process that has taken more than two years of work, the Board is now in danger of caving to industry pressure. Many aspects of the permit reflect a step backward from the current permit, and even the 2011 draft permit.

3

I urge the State Water Board to work with staff to develop a streamlined permit that is clear and enforceable, and requires industrial facilities to collect accurate data about the pollutants they allow to enter San Francisco Bay and other state waterways. California needs clear limits on the amount of storm water pollutants discharged into our water bodies in order to provide dischargers with a clear path to compliance, and facilitate efficient enforcement by the State and Regional Water Boards. Please develop a strong, enforceable Industrial Stormwater Permit that helps ensure that California waterways are safe and healthy for wildlife, recreational users and all California communities.

Thank you.

Message to the Board:

I am writing to urge the State Water Board to update the Industrial General Stormwater Permit by adding clear and enforceable limits on pollution. Runoff from industrial facilities can contain heavy metals such as lead, zinc, and copper. These pollutants are highly toxic and endanger the health of California communities and watersheds. Unfortunately, after a revision process that has taken more than two years of work, the Board is now in danger of caving to industry pressure. Many aspects of the permit reflect a step backward from the current permit, and even the 2011 draft permit.

I urge the State Water Board to work with staff to develop a streamlined permit that is clear and enforceable, and requires industrial facilities to collect accurate data about the pollutants they allow to enter San Francisco Bay and other state waterways. California needs clear limits on the amount of storm water pollutants discharged into our water bodies in order to provide dischargers with a clear path to compliance, and facilitate efficient enforcement by the State and Regional Water Boards. Please develop a strong, enforceable Industrial Stormwater Permit that helps ensure that California waterways are safe and healthy for wildlife, recreational users and all California communities.

Thank you.

Message to the Board:

I am writing to urge the State Water Board to update the Industrial General Stormwater Permit by adding clear and enforceable limits on pollution. Runoff from industrial facilities can contain heavy metals such as lead, zinc, and copper. These pollutants are highly toxic and endanger the health of California communities and watersheds. Unfortunately, after a revision process that has taken more than two years of work, the Board is now in danger of caving to industry pressure. Many aspects of the permit reflect a step backward from the current permit, and even the 2011 draft permit.

I urge the State Water Board to work with staff to develop a streamlined permit that is clear and enforceable, and requires industrial facilities to collect accurate data about the pollutants they allow to enter San Francisco Bay and other state waterways. California needs clear limits on the amount of storm water pollutants discharged into our water bodies in order to provide dischargers with a clear path to compliance, and facilitate efficient enforcement by the State and Regional Water Boards. Please develop a strong, enforceable Industrial Stormwater Permit that helps ensure that California waterways are safe and healthy for wildlife, recreational users and all California communities.

Thank you.

Message to the Board:

I am writing to urge the State Water Board to update the Industrial General Stormwater Permit by adding clear and enforceable limits on pollution. Runoff from industrial facilities can contain heavy metals such as lead, zinc, and copper. These pollutants are highly toxic and endanger the health of California communities and watersheds. Unfortunately, after a revision process that has taken more than two years of work, the Board is now in danger of caving to industry pressure. Many aspects of the permit reflect a step backward from the current permit, and even the 2011 draft permit.

I urge the State Water Board to work with staff to develop a streamlined permit that is clear and enforceable, and requires industrial facilities to collect accurate data about the pollutants they allow to enter San Francisco Bay and other state waterways. California needs clear limits on the amount of storm water pollutants discharged into our water bodies in order to provide dischargers with a clear path to compliance, and facilitate efficient enforcement by the State and Regional Water Boards. Please develop a strong, enforceable Industrial Stormwater Permit that helps ensure that California waterways are safe and healthy for wildlife, recreational users and all California communities.

Thank you.

Message to the Board:

I am writing to urge the State Water Board to update the Industrial General Stormwater Permit by adding clear and enforceable limits on pollution. Runoff from industrial facilities can contain heavy metals such as lead, zinc, and copper. These pollutants are highly toxic and endanger the health of California communities and watersheds. Unfortunately, after a revision process that has taken more than two years of work, the Board is now in danger of caving to industry pressure. Many aspects of the permit reflect a step backward from the current permit, and even the 2011 draft permit.

I urge the State Water Board to work with staff to develop a streamlined permit that is clear and enforceable, and requires industrial facilities to collect accurate data about the pollutants they allow to enter San Francisco Bay and other state waterways. California needs clear limits on the amount of storm water pollutants discharged into our water bodies in order to provide dischargers with a clear path to compliance, and facilitate efficient enforcement by the State and Regional Water Boards. Please develop a strong, enforceable Industrial Stormwater Permit that helps ensure that California waterways are safe and healthy for wildlife, recreational users and all California communities.

Thank you.
