State Water Resources Control Board Division of Water Rights
Attn: Mitchell Moody
P.O. Box 2000
Sacramento, CA 95812-2000
mitchell.moody@waterboards.ca.gov

Dear Chairman Esquivel and Honorable Board Members:

On behalf of the City of Kerman we write in opposition to Semitropic Water Storage District's (Semitropic) Petition to Revise the Fully Appropriated Stream Status of the Kings River (FAS).

Kerman is an incorporated city and a water purveyor. As well, Kerman is a Disadvantaged Community (DAC). California law recognizes the need to address water supply and quality issues for DACs, and it is in this context that Kerman submits the following comments on the Semitropic FAS petition.

Semitropic's FAS petition is submitted in an attempt to secure a right to divert Kings River waters for use in Kern County – outside the watershed of origin. The Kings River is the primary surface water source to the communities within the three counties that comprise the watershed of origin: Fresno, Kings, and Tulare Counties. Groundwater Sustainability Agencies (GSAs) throughout those counties are now engaged in the process of addressing groundwater sustainability, and use of Kings River high water flows is a crucial element of those sustainability efforts.

Public comments submitted on the Semitropic Project establish that historic Kings River flood flows are less than the anticipated groundwater overdraft in Fresno, Kings, and Tulare Counties. We are aware that planning efforts at various levels of regional and local government are underway to fully utilize Kings River flood flows for addressing SGMA impacts and anticipated growth. It only makes sense that Kings River water should be available to meet these needs within the watershed of origin.

The Semitropic Project seeks to divert Kings River flood flows out of the watershed. By exporting water from critically over drafted groundwater basins, the Semitropic project would significantly impair the ability of the regional GSAs to comply with SGMA without resorting to removing significant lands from production and limiting urban growth. The Semitropic Project would negatively impact the lives and livelihoods of many people in Fresno, Kings, and Tulare Counties who depend on Kings River waters.

"COMMUNITY COMES FIRST"

California is the first state in the nation to enact a law recognizing that “every human being has the right to safe, clean, affordable and accessible water” – also known as “the human right to water.” The Kings River service area includes 51 “Disadvantaged Communities” – areas which most suffer from a combination of economic, health, and environmental burdens – with a population of 646,236. In addition, the area includes 59 “Severely Disadvantaged Communities” with a population of 84,510. In all, 69 percent of the population that relies upon Kings and Tulare groundwater basins lives in a Disadvantaged Community or Severely Disadvantaged Community.

The Semitropic Project has the potential to deprive DACs access to water and jeopardize long-term regional/local sustainability. DACs already disproportionately suffer from poverty, high unemployment, asthma and heart disease, as well as air and water pollution, and the Semitropic Project will only make already-difficult circumstances worse and threaten “the human right to water.”

Further, contrary to Semitropic’s claims, the Project neither reduces nor eliminate flood risk. Rather, it increases the potential for flooding on the South Fork Kings River.

For these stated reasons and more, Kerman respectfully requests that the State Water Resources Control Board deny Semitropic’s FAS petition. The Semitropic FAS petition and Project are not in the public interest. Instead, the Project would only harm groundwater sustainability efforts, and threaten access to safe, clean, affordable and accessible water.

Sincerely,

Ken Moore, Public Works Director
City of Kerman
