Subject:

City of Santa Cruz - Petition for Extension of Temporary Urgency Change Order,

License 9847 (Application 17913) Extension

Dear Ms. Evoy,

The State Water Board approved the City's Petition for Temporary Urgency Change Order on February 14, 2014. The Order allows a temporary day reduction in the downstream bypass/release from Newell Creek Reservoir from 1.0 cubic feet per second (cfs) to 0.2 cfs. The Order has been extended twice due to the ongoing extreme drought conditions. The Order is currently set to expire August 9, 2015. As of July 30, 2015, the impact of the Order has been to save approximately 275 million gallons of storage in the reservoir. The Order is proving to be a significant benefit to the City's ability to manage the very real water shortage emergency we are facing.

With this letter and accompanying petition application the City is requesting a 180 day extension of the reduced bypass/release of 0.2 cfs, to February 5, 2016. Also attached is proof of payment of petition filing fees of \$2,677 and \$850.00 (Attachment 1) and the CEQA Notice of Exemption (Attachment 2).

Compliance with the Current Order

The Order was conditioned with three requirements:

1. Reduce water demand by 20% of normal water use by instituting water rationing and promoting conservation:

State of California Water K...ources Control Board Division of Water Rights February 2, 2015 Page 2

The City of Santa Cruz has an internationally recognized water conservation program. The goal of the drought-related Stage 3 Water Shortage Emergency is to reduce system-wide water use by 25 percent. Use reduction has exceeded 30% during some months of the Order's term - well in excess of the 20% reduction required by the Order. All customers have been and will continue to be requested to voluntarily cut back water use by 20 percent and mandatory restrictions on outdoor water use remain in place. Utility bills continue to show residential rationing allotments in case they are needed again later in 2016. Per the terms of the current Order, the City has reported on the status of its water rationing on a monthly basis.

- 2. Monitor the effects of the amended release or bypass amount on fisheries resources and take all necessary steps to avoid harm to fish in Newell Creek:
 - Monitoring data and observations from February 2014 to date indicate that the reduced bypass flow has not changed passage conditions in critical riffles nor created any areas of hydrologic discontinuity.
- 3. Submit a written report to the Deputy Director for Water Rights that summarizes all activities conducted during the term of the current Order to ensure compliance with the requirements of this Order, and the amount of water use reduction achieved.

A summary report was submitted on February 13, 2015 for the previous Order renewal. The summary report for the current Order is due on September 15, 2015.

The above information confirms that the City is in compliance with the Order.

Urgent Need for Extension of the Order

Newell Creek Reservoir is the City's only drought supply and is modestly sized. The City of Santa Cruz has an urgent need to extend the Order which suspended the bypass and release requirement on Loch Lomond Reservoir from 1 cfs to 0.2 cfs, in order to preserve the water remaining in storage so that there will be sufficient water to meet essential health and safety needs in the event of continuing drought. Over a period ten years, from 2003 to 2012, the average water level of the Reservoir has been 577 feet, as measured on April 1 of each year. This represents 98.95% of storage capacity, or 2.836 billion gallons. As of July 30, 2015 the reservoir was at approximately 566.80 feet or 80% of storage capacity/ 2.258 billion gallons and current inflow was approximately 0.1 cfs and steadily declining - 10 percent of the typical 1 cfs fish release. While December 2014 was characterized by above average precipitation, it was insufficient to provide sustained runoff after several successive dry years and the region remains in an "extreme drought" condition¹. Current flow at the Big Trees USGS gage (which has the longest term record in the San Lorenzo watershed, and which Newell Creek is a tributary to) is significantly less than the 25th percentile flow at this time. As upstream flows inevitably recede further and evaporation and transpiration remove water from the reservoir, the gap between inflow and outflow will become greater. Therefore, the release of 1 cfs of stored water pursuant to the 1957 agreement would further deplete the City's only source of stored water for drought protection.

The City is 100% dependent upon local rainfall and runoff for its municipal water supply. The City holds additional permits for diversion from the San Lorenzo River and has pre-1914 water rights on coastal water sources. However, these sources are also severely constrained due to fishery protection considerations as well as the very low flows resulting from the successive years of low precipitation.

State of California Water Resources Control Board Division of Water Rights February 2, 2015 Page 3

Because of this critically dry weather pattern, the City has to rely increasingly on the water remaining in storage in Newell Creek Reservoir to meet its demands. This reservoir is the City's only stored water resource, and its only drought cotingency water supply.

This Order, along with the success of the Water Shortage Emergency declaration, have been critical to helping the City achieve its storage goals thus far. However, without renewal of the Order reservoir storage may be inadequate to continue to meet essential health and safety needs as the drought continues through the rest of this dry season and possibly into the next water year.

Conclusion

We appreciate the assistance of the SWRCB in approving the temporary Order, which is significantly improving our ability to mitigate one of the impacts of the serious water shortage condition we are facing. As the extreme drought persists, our local flowing sources have and will continue to decrease and reliance on storage will become increasingly important. Given the demonstrated benefit to public health and safety and lack of impact on instream conditions resulting from the Order we are requesting that the Order be extended for another 180 days, to February 5, 2016. We have provided notice of our request for this extension to NOAA and DFW and have been told that they are not opposed to it.

Please let us know if you have any questions or concerns. Again, we appreciate the opportunity to work in a collaborative manner to mitigate one of the impacts of this extreme drought.

Sincerely,

CRB
