RE: Comments for May 6<sup>th</sup> Workshop on Order WR 2009-0027-DWR

Dear Chairman Hoppin and Members of the Board,

My letter concerns Order 2009-0027- DWR and the modifications to permit terms that would reduce impacts. Reduction of flows will cause severe impacts to water quality, recreation, community water systems, salmon and seelhead as well as the lower River economy that depends on a healthy Russian River.

I and my family have been using the river for over thirty years. When there's sufficient water it's fun and healthy. When there's not, it's polluted and full of noxious plants and few fish.

To reduce the impacts from reduced flows under Order 2009-0027-DWR I ask you on May 6 to take action to protect water quality and beneficial uses in the Russian River.

Specifically we urge you to:

- Increase frequency of chemical water quality monitoring to every two weeks with results posted promptly on a public website to proactively prevent water quality problems such as algae blooms from increased nutrient concentrations
- Include new provisions in the order to require flow changes in response to violations in water quality standards or as needed to protect juvenile ESA listed fish over the summer, the water agency released water to protect grapes from frost on April 14 to 16<sup>th</sup> so we expect increases to protect water quality as well
- Installation of additional gauges as needed to ensure instantaneous flow compliance levels are maintained, in 2004 and 2007 compliance levels were violated under previous orders
- A minimum of 25% mandatory conservation for SCWA customers and all users downstream of Dry Creek to to help maintain flows and conserve water in case of multi-year drought.
- Mandatory conservation by all permitted water diversions upstream of Dry Creek including agricultural and rural residential diversions and streamside wells pumping underflow
- Additional prohibitions in the Order on diversions that are not permitted in critically dry conditions or if needed a separate order restraining those unpermitted diversions to protect water storage in Lake Mendocino and maintain higher flows
- Keep order prohibition on commercial turf irrigation in SCWA service area and expand to include all commercial turf using water from the Russian River

I believe that modifying the order to include these provisions will improve protection of water quality, juvenile endangered fish and likely result in somewhat higher flows due to reduced diversions.

Sincerely,

Joe Hogan

Sebastopol, CA
