Subject: RE: Environmental Health Department and Public Health Department News Release, June 2016

Thanks for sharing the press release with me. I do have a two questions/comments.

1. The press release does not identify the location(s) where the public should be on the "lookout" for BGA. In other words, I did not see any mention that BGA has been observed in the San Joaquin River (Stockton Deep Water Ship Channel) between Prisoners Point and the Port of Stockton.
2. I tried the link you noted for the US EPA and it takes me to a Gulf of Mexico webpage. I would like to share with you the webpage for EPA that is devoted to the study and research on Harmful Algal Blooms. The webpage is: <https://www.epa.gov/nutrient-policy-data/cyanohabs> This page provide information on cyanobacteria and toxins, detection methods, health and ecological effects, research and news, causes and prevention and control and treatment.

Also, I do have some information on dog deaths (nationwide) that I will send and some articles from the East Bay and the North Coast (for your internal information).

Thanks.
-Christine Joab
