CDEC screen print of North Delta monitoring stations was edited by N. Suard by adding blue arrows to show the locations of waterfront residential homes and commercial properties along Steamboat Slough which could be negatively impacted by degradation of the historically fresh water on Steamboat Slough. Blue numbers reflect the residential homes in the areas located by blue arrows.

Red circles and large black letters were added to monitoring station locations that are discussed in testimony of N. Suard., to make it easier for persons to note the locations.

Homes & businesses on the water on Steamboat Slough
