

! This table is used to look up year-type indices (Dustin Jones 11/22/99)

! Updated 06/09/2005 by Messele Ejeta. SACindex and SJRindex updated using values from CDEC.

! AmerD893 updated using the sum of unimpaired inflow to Folsom from April to September

! SHASTAindex updated based on Full Natural Inflow to Shasta. If total inflow to Shasta in any

! given year is less than 3.2 maf, it is Shasta critical year (value of 4). Also, if the total

! inflow in any two consecutive years is such that the total inflow of each year is less than

! 4.0 maf and the total consecutive two year deficiency is higher than 0.8 maf below the two

! year total of 8.0 mark, the second year becomes Shasta critical year.

! FEATHERindex was updated in a similar fashion as Shasta Index.

! Amer403030 is not used, so it was not updated.
