

## **EXHIBIT SVWU-300**

### **SURREBUTTAL TESTIMONY OF WALTER BOUREZ, P.E.**

1. I am a registered civil engineer in the State of California and am employed by the firm of MBK Engineers (“MBK”). I hold Bachelor of Science and Master of Science degrees in Civil Engineering from California State University, Sacramento.
2. A copy of my resume, which accurately describes my education and experience, was previously submitted as Exhibit SVWU-101.
3. For the surrebuttal phase of Part 1 of this hearing, I was asked to prepare exhibits and testimony to respond to the Petitioners’ criticisms of MBK’s modeling of the California WaterFix project.
4. A summary of the Petitioners’ criticisms and MBK responses are contained in Exhibit SVWU-302, which is a technical report prepared by MBK in support of my testimony.
5. A PowerPoint presentation summarizing the MBK technical report (Exhibit SVWU-302) is contained in Exhibit SVWU-303
6. The key conclusions of my surrebuttal testimony can be summarized as follows:
  - MBK modeling applied consistent operational rules and logic to NAA and CWF scenarios
  - MBK modeling of discretionary actions adheres to SWP policy and CVP “philosophy”
  - There are no physical, legal, or regulatory conditions that would prevent Petitioners from operating CWF as modeled by MBK. Therefore, MBK modeling results are a valid depiction of potential CWF operations
