Subject: No water takeover

Dear sir/madam,

Clearly, you have no regard for the thousands of people who have given both example and proof that your "save the fish" smokescreen is not right, nor needed.

Clearly, it is a matter of monetary gain and we, the people, see that.

Water, a precious commodity, should remain in its naturally produced areas, unless in DIRE straights (which it is not).

Government continues to grow bigger than its pant size. Please stop and think beyond the scope of lining your pockets.

People move to and live in specific areas because of the resources available, including the rights and use of water, for farming, drinking and recreational reasons.

My areas wells are drying up by the hundreds in Tuolumne County, yet here you are planning on shipping off what water we are able to save.

WRONG. WRONG. WRONG.

Please find a new project to set your sights on and leave our water resources where they alone.

Thank you.

Sue Vidauri
