

I would like to see solid enforceable restrictions on golf courses. In my district a golf course is our biggest user of water. I am told that due to political influence I can't enforce our council approved water use restrictions. I may be missing it but I don't see much if anything aimed at golf courses. If anything I would like to hear some ideas on how to encourage the golf course to cut their water or how they can cut their water use without compromising the course itself.

Thank You
