

State Water Resources Control Board

December 27, 2022

Subject: Order WR 2021-0082-DWR, Addendum 10: Conditional Temporary Suspension of Curtailments in Shasta River Watershed

To: Scott River Watershed and Shasta River Watershed Water Right Holders (sent to water right holders for which the Board has email addresses) and Interested Parties on Scott-Shasta Drought E-mail List

As further described below, this Addendum amends Order WR 2021-0082-DWR to temporarily and conditionally suspend all curtailments of water rights under Order WR-0082-DWR in the Shasta River watershed, so long as flows are at or above 125 cubic feet per second (cfs) at the [Yreka United States Geological Survey \(USGS\) gage](#).

On September 10, 2021, the State Water Board issued a curtailment order (Order WR 2021-0082-DWR)¹ to the most junior water right holders in the Shasta River watershed, including all post-Adjudication appropriative surface water and appropriative groundwater rights described in section 875.5, subdivision (b)(1)(A), as well as more senior appropriative rights with priority dates later than November 1912, as described in section 875.5, subdivision (b)(1)(B). Based on forecasted precipitation, flows, demand projections, and other factors, the State Water Board issued addenda to Order WR 2021-0082-DWR on September 23, October 21, October 29, December 17, December 22, December 29, 2021, January 26, and February 25, 2022, partially suspending curtailment of water rights in order of priority contingent on the required minimum flow at the Yreka United States Geological Survey (USGS) gage being met and sustained. On March 15, 2022, the State Water Board reinstated water right curtailments based on ongoing dry conditions, the approach of the irrigation season, and multiple unexpected decreases in flows below the minimum flow requirement. (Addendum 9.) Addendum 9 required the most junior water diverters (junior to November 11, 1925) to cease diversions immediately except when flows at the Yreka USGS gage were at least 5 cfs above the minimum flow. The remaining water rights (senior to November 11, 1925 and junior to November, 24, 1912) were directed to work with the Watermaster and State Water Board as appropriate, and if necessary to curtail in order of priority to ensure that the required minimum flows were met and sustained at the Yreka USGS gage

The State Water Board issued two additional curtailment orders in 2022. Order WR 2022-0162-DWR was issued on August 2, 2022, and conditionally curtails water rights specified in the Shasta Adjudication to a priority date of April 1, 1885. Order WR 2022-0167 was issued on September 13, 2022, and conditionally curtails water rights in the Shasta Adjudication to a

¹ References to Order WR 2021-0082-DWR include Order WR 2021-0085-DWR, Order WR 2022-0142-DWR, and Order WR 2022-0161-DWR [issued for water diversions that did not receive the original curtailment order because of incorrect addresses and other reasons].

priority date of March 1, 1850, which includes all the adjudicated water rights in the Shasta River watershed, except Beaughan Creek water rights. None of these conditionally curtailed senior water rights were curtailed since late November or earlier and curtailments under these Orders are now suspended.

While an increasing flow trend was observed at USGS Yreka gage since the end of irrigation seasons in late September 2022, and late October 2022, flows were lower than minimum flow requirement about 64 percent of time until November 22, 2022. After November 22, 2022, flows were higher than minimum flow requirements except 4 days. Since late November, the maximum daily shortfall of emergency minimum flows has been manageable by partial curtailment of water rights subject to Order WR-2021-0082-DWR.

Flows at Yreka USGS gage were 237 cfs at 7:00 am, December 27, 2022. The forecasted precipitation for the Shasta River watershed is in the range of 4.1 inches to 5.3 inches for the next seven days. The Yreka USGS gage historical impaired flow data from the recent driest water years² indicates a very high probability of continuing to exceed the 125 cfs flow requirement through the end of March 2022. In addition, the 7-day precipitation forecast shows a wet period for the coming days, which is expected to add flow to the Shasta River.

Accordingly, the State Water Board is issuing a **temporary suspension of all curtailments in the Shasta River watershed, contingent on: (1) 125 cfs being sustained at the Yreka USGS gage; and (2) parties with suspended curtailments working with the Watermaster and State Water Board as appropriate to manage flows; and (3) appropriate groundwater users working with the State Water Resources Control Board to manage flows.** The curtailments of water rights listed in Attachment A are suspended so long as the 125 cfs minimum flow requirement is sustained at the Yreka USGS gage. The temporary suspension will expire at end of March 2022, unless otherwise extended or curtailments are reimposed and requires flows of at least 125 cfs at the Yreka USGS gage for diversions under this temporary suspension of curtailments.

Active curtailments are not anticipated through the end of March 2022. However, If flows dropped below minimum flow requirement (125 cfs) at the Yreka USGS gage during this time period, curtailed water rights will be informed by email, and updated curtailment list and map will be posted on the Scott River and Shasta River Drought Response website (https://www.waterboards.ca.gov/drought/scott_shasta_rivers/). As appropriate, water users must work with the Watermaster and the State Water Resources Control Board regarding their water use in this time period.

Water diverters in Attachment A shall monitor and record the amounts of water diverted during this time period (i.e., during the suspension of curtailments). Water diverters in Attachment A shall report their water use and purpose of use, as requested, to the Watermaster and State Water Board. The suspension of curtailment under this Addendum does not provide for diversions for inefficient stock watering. **Parties are reminded that the Emergency Regulation contains a prohibition against inefficient livestock watering during September through March (the adult salmon migration period).** This prohibition is in effect whether or not your water right is curtailed. (Cal. Code Regs., tit. 23, § 875.7.) The State

² The recent driest water years evaluated were: 2013 – 2014, 2014-2015, and 2020-2021

Water Board intends to follow up with individuals who appear to be in violation of the inefficient livestock watering provision.

The State Water Board will be monitoring weather forecasts and stream gages to determine if suspensions should be extended in the future, or if additional curtailments are needed. In addition, the State Water Board is currently evaluating whether to lift the inefficient stockwater watering prohibition early if certain findings can be made under the Emergency Regulations, section 875.7, subdivision (b). To stay informed on future updates related to curtailments and the ongoing Emergency Regulation effort in the Scott River and Shasta River watersheds, please:

1. Monitor your email if you have subscribed to the **“Scott-Shasta Drought”** email list under “Water Rights”; and/or
2. Visit our **Scott River and Shasta River Drought Response website** (https://www.waterboards.ca.gov/drought/scott_shasta_rivers/) If an email list notice is issued on the weekend, the website will not be updated until the following Monday due to limitations on implementing such updates.

If you have questions regarding this email, please contact staff by email at: ScottShastaDrought@waterboards.ca.gov or leave a message at our dedicated Scott River and Shasta River Drought phone line at: (916) 327-3113.

Sincerely,

Erik Ekdahl, Deputy Director
Division of Water Rights

Enclosure:

¹ You exercise an appropriative groundwater right when you: (1) do not own (or rent or lease) land overlying the basin that you use the water on; (2) own overlying land but use the water on non-overlying land; or (3) sell or distribute the water to someone else. Groundwater appropriators have a priority date from when the groundwater well was constructed, and water first used for non-overlying use. You may also exercise an overlying groundwater right, which is not curtailed by this order.

² Conditionally curtailed means the water rights are curtailed conditioned on the minimum instream flow being met at the Yreka United States Geological Survey gage. These water rights holders are directed to work with the Scott Valley and Shasta Valley Watermaster District (Watermaster) and State Water Board, as appropriate, and if necessary curtail in the order of priority to ensure that the required minimum flows are met at the Yreka USGS gage.
