

## State Water Resources Control Board

June 16, 2026

**Subject: Order WR 2024-0006-DWR, Addendum 6: Reinstatement of Conditional Curtailments for Junior Water Rights in Shasta River Watershed**

To: Shasta River Watershed Water Right Holders (sent to water right holders for which the Board has email addresses) and Interested Parties on Scott-Shasta Drought and Flows E-mail List

The State Water Resources Control Board (State Water Board) is reinstating conditional curtailments for junior water rights in the Shasta River watershed, as follows:

- **Water right diverters with priority dates between and including November 25, 1912 and December 31, 1957 are conditionally curtailed(see Attachment to this Addendum)** and are directed to work with the Scott Valley and Shasta Valley Watermaster and State Water Board, as appropriate, to manage diversions and if necessary curtail in order of priority to ensure the required minimum flows are met and sustained at the [Yreka United States Geological Survey \(USGS\) gage](#).
- **Water right diverters with a priority date of, or junior to, January 1, 1958, are also conditionally curtailed and may only divert under their priority of right when specific additional conditions outlined in this addendum (outlined below) are met.** Water rights subject to these additional conditions are listed in orange in the Attachment to this Addendum.

For reference, the required minimum flow at the Yreka USGS gage is 50 cubic feet per second (cfs) from May 1-September 15, 75 cfs from September 16-30, and 105 cfs in October.

**This Addendum is issued to reinstate conditional curtailments for all post-Adjudication appropriative surface water rights and appropriative groundwater rights described in section 875.5, subdivision (b)(1)(A) of the [Emergency Regulation](#) (herein Regulation), as well as more senior appropriative rights with priority dates of or junior to November 25, 1912, as described in section 875.5, subdivision (b)(1)(B).** There may be limited opportunities when water is available for diversion by even the most junior water rights such that conditional curtailment may provide for limited water diversions that do not harm more senior water rights holders. This Addendum provides flexibility based on close coordination with the Watermaster and consistent with the specific conditions outlined below.

**Specific Conditions that Must be Met for Most Junior Water Rights (with a priority date of, or junior to, January 1, 1958) to Divert:**

- (1) Prior to diverting water, the water right holder shall consult with and receive confirmation from the Watermaster that there is water available for diversion under their priority of right and that such diversion will not impact other more senior water rights holders. **The water right holder shall not divert until the Watermaster has confirmed that there is water available.** The diverter shall document such consultation and confirmation (e.g., save emails), and provide records of such consultation upon request by the State Water Board.
- (2) The water right holder shall **notify** the Watermaster and State Water Board when diversion commences, changes, and ceases, including the amount of water being diverted and any changes to the diversion amount.
- (3) The water right holder shall **cease diversion immediately upon notification from the Watermaster or State Water Board that there is no longer water available** under their priority of right, such that continued diversion will not provide for the minimum flow requirement to be met or a more senior water right holder to divert under their higher priority water right. The water right holder shall provide notification to the Watermaster and State Water Board confirming when such diversion ceased.
- (4) When diverting, the water right holder shall **check the Yreka USGS gage and [Department of Water Resources Shasta River at Grenada Pump Plant \(SPU\) gage](#)** at least daily. Additionally, the water right holder shall:
  - Contact the Watermaster when flows at the [Yreka USGS gage](#) are: (1) at or below 55 cfs, (2) nearing the minimum flow requirement, and (3) flows at the SPU gage have declined from the prior day. **Do not divert when the minimum flow requirement is not being met at the Yreka USGS gage (50 cfs from May 1-September 15, 75 cfs from September 16-30, and 105 cfs in October).**

Failure to implement any of the above conditions is subject to enforcement under the Regulation.

**Background**

On June 7, 2024, the State Water Board issued a curtailment order ([Order WR 2024-0006-DWR](#) or Order) to water right holders in the Shasta River watershed, including all post-Adjudication appropriative surface water and appropriative groundwater rights described in section 875.5, subdivision (b)(1)(A) of the [Regulation](#) as well as more senior appropriative rights with priority dates of or junior to November 25, 1912, as described in section 875.5, subdivision (b)(1)(B). The Order conditionally curtailed water rights and requires coordination of future diversions with the Watermaster or the State Water Board. The Order notes that if this coordination proved insufficient to achieve and maintain the minimum flow requirement, then curtailment based on priority will be enforced.

Furthermore, the Order establishes specific conditions for water rights of, or junior to, January 1, 1958, which become applicable when flows fall below 55 cfs and that must be followed while conditionally curtailed under this Addendum. These conditions are outlined

below. Addenda to the Order were issued to suspend or reinstate curtailments in 2024 and 2025, as required to maintain the minimum flow requirements established in the Regulation.

This irrigation season, flows have fluctuated, with flows slightly above 200 cfs at the start of the irrigation season (April 1, 2026). Flows ranged between roughly 90-215 cfs in April and 61-100 cfs for most of May 2026. In late May 2026, flows increased to 172 cfs on May 30, 2026, with associated precipitation and have generally declined thereafter. Flows began a sharp decline on June 11, 2026, with flow dropping from 95 cfs at 1:00 pm on June 11, 2026, to 45.3 cfs as of 12:00 noon on June 13, 2026. This drop coincided with increased temperatures. Since then, flows rose above the flow requirement of 50 cfs for portions of June 13-14, 2026, and again dropped below the June flow requirement of 50 cfs as of 10:45 pm on June 14, 2026. As of 11:45 am on June 15, 2026, the flow at the Yreka USGS gage was recorded at 46.5 cfs.

Due to flows repeatedly falling below the minimum requirement of 50 cfs for June-September 15, the State Water Board is reinstating conditional curtailments. The snowpack data shows no significant snow cover remaining in the Shasta River watershed, and the precipitation forecast for the next 10 days is negligible. Historical flows at the Yreka USGS gage demonstrate that Shasta River flows are highly impacted by surface water diversions and groundwater pumping throughout the irrigation season. There is a good chance for flows to drop below the minimum fish flow requirements during the summer similar to previous years with similar hydrology. Warmer-than-average temperatures are another factor that increase the risk of flows dropping below the minimum flow requirement due to significant, simultaneous diversions.

### **Notification and Consult with Watermaster and State Water Board**

Water rights holders with a priority of or junior to January 1, 1958, that are seeking to consult with the Watermaster on the availability of water for diversion under their priority right or to report on the initiation, change, or cessation of diversion as noted in Items 1-4 above should email the Watermaster at: [deputy@sswatermaster.org](mailto:deputy@sswatermaster.org). Associated communications with the State Water Board should be emailed to: [ScottShastaFlows@waterboards.ca.gov](mailto:ScottShastaFlows@waterboards.ca.gov). In accordance with Order WR 2024-0006-DWR, the State Water Board may notice water rights holders of the need to immediately curtail to meet and sustain the minimum flow requirement at the Yreka USGS gage.

### **Allowances for Continued Limited Diversions**

The Regulation has exceptions for certain types of diversions that may continue even after you receive a curtailment order, if the appropriate form(s) is submitted to the State Water Board. These exceptions are:

- Non-consumptive Diversions. This exception applies if your diversion is not consumptive, meaning that it does not use up water or change the time the water is available to others (e.g., run-of-river hydropower with returns entering the same stream, instream use).

- Minimum Human Health and Safety Diversions. This exception applies if a curtailed diversion is your only water source for minimum human health and safety purposes, like drinking, cooking, washing, or meeting the state’s critical infrastructure needs. Please note that diversions for firefighting may continue under this exception.
- Minimum Livestock Watering Diversions. This exception applies if a curtailed diversion is your only source for minimum livestock watering. See section 875.3 in the Regulation for more information on minimum livestock watering.

Reporting, certification, and petition forms previously submitted for the Order are still active and do not need to be resubmitted unless you are updating your previous submittal. If you want to continue diverting using one of the above exceptions, and you have not submitted information already, you must submit the relevant information to the State Water Board. Please contact us using the information in the Questions and How to Stay Informed section below if you have questions about a prior submittal or need to submit a certification or petition.

### **Questions and How to Stay Informed**

The State Water Board will continue to monitor weather forecasts, stream gages, diversions, and watershed conditions regularly to determine if further adjustments to curtailments are appropriate. If you believe curtailment is being reimposed in error or have questions regarding this Addendum, please contact State Water Board staff immediately using the information provided below.

#### **Contact Staff by:**

- Email: [ScottShastaFlows@waterboards.ca.gov](mailto:ScottShastaFlows@waterboards.ca.gov)
- Phone: (916) 327-3113

#### **Stay Informed by:**

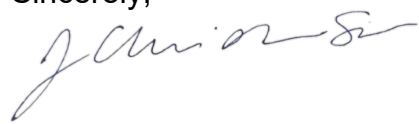

- Webpage: Please monitor your email and our [Scott–Shasta Drought webpage](https://www.waterboards.ca.gov/drought/scott_shasta_rivers/) (https://www.waterboards.ca.gov/drought/scott\_shasta\_rivers/) for future updates.
- Email Subscription: If you received this notice in a forwarded message and would like to receive future emails related to this and similar efforts, please sign up for the State Water Board’s “Scott-Shasta Drought and Flow Efforts” [email subscription list](#) under “Water Rights”.

Sign up for an email subscription list online at:

---

\* Water Rights “Conditionally Curtailed” in Orange font, date of or junior to January 1, 1958 shall comply with the additional conditions outlined in Addendum 6 to Order WR 2024-0006-DWR.

Water Rights “Conditionally Curtailed” in Black font, are directed to work with the Scott Valley and Shasta Valley Watermaster District (Watermaster) and State Water Board, as appropriate, to manage diversions and if necessary curtail in order of priority to ensure the required minimum flows are met and sustained at the Yreka United States Geological Survey (USGS) gage.

<sup>1</sup> You exercise an appropriative groundwater right when you: (1) do not own (or rent or lease) land overlying the basin that you use the water on; (2) own overlying land but use the water on non-overlying land; or (3) sell or distribute the water to someone else. The priority date for an appropriative groundwater right is the date when the groundwater well was constructed and water was first used for a non-overlying use. If your well is used for both overlying and appropriative uses, you may continue to exercise an overlying groundwater right, which is not curtailed by this order.
