

I wish to express my position regarding the further export of water from the Tuolumne and Merced rivers as well as others in our area.

I am directly and seriously affected by such a move. You are sending water to southern California and drying up northern California.

My water well is being affected. Our crops, the food for a large portion of the world, is being depleted. Why are the people of southern California being given preferential treatment over those of us in northern California? We are people too. You steal our water to give to one of the most crime ridden areas in our nation.....really makes a lot of sense.

Limit the population in the southern California cities, tell the excess to move on to another state where there is water for them, don't steal it from us.

Thank you,

Helen Watson
