

Comment Letter - Bay-Delta plan SED

Jeanin Townsend
Clerk to the Board

Many of these letters will echo the same sentiments of the many people that would be affected by this proposal. Agriculture is the backbone of many suitors. The state, country and the world all benefit from the hard work that, dairymen, farmers and anyone else involved in agriculture, put forth everyday. Many of us may not even get along or agree on how milk must be priced or the value of the hay crop. But the one common thing we can all agree on is that we need water to survive. Yes the Central Valley probably wasn't ~~the~~ the best place to farm (geographically) we would be just that, a valley-desert if not for the water we receive. And now to have this proposal take more water from us and have the economic impact that we know it will have, would be devastating. I write this letter to ask that all the facts be reviewed and a common sense decision is made based on all the information that's provided.
