Note:

1 - "**Stream Mile**" is the lineal distance upstream from the streams' confluence with a larger stream.

2 - "**Total acreage of the watershed**" for the listed "STREAM" in which flow measurements were taken.

3 - In most, but not all cases, **flow measurements were taken a short distance upstream of the "STREAM"s' confluence with a larger stream**.

4 - Stream velocities were measured with the following instruments: **Marsh-McBirney** (Orleans RD prior to 2001); **Swoffer** (Orleans RD after 2001 and all others).
