Subject: RE: Stanshaw Creek By-pass flow`

Hi Skylar- sorry for all the delays.

In 2009, the department recommended a minimum instream flow of 2.5 cfs at the Highway 96 bridge. At this point I seen no reason to rescind or change that recommendation.

I reviewed the NOAA recommendations as well. I believe they are reasonable, but the underlying assumption seems to be that the return flow currently going to Irving Creek would instead need to come back to Stanshaw Creek. At this point in time I see no evidence that will occur, although I suspect it eventually will.

Thank you

Gary

Gary,

No problem, I appreciate you staying on this issue.

Skyler

Hi Skylar- I will look this over and see if we can concur or if we will stay with our original recommendation. I appreciate your patience during this busy time for me

Margaret,

I wanted to thank you for your work on this issue. I appreciate you helping the Division with by-pass flow recommendations for the Cole Diversion on Stanshaw Creek. The Division will use your analysis to help support of findings and corresponding corrective actions. I will make sure to include you on the mailing list for the Marble Mountain Ranch Report of Inspection which will contain our findings and corrective actions.

Best Regards,

Hi Taro and Skylar,

Attached are our recommendation for the instream flow requirements for Stanshaw Creek.

Margaret

Good Morning,

I wanted to check in and see how the by-pass flow recommendations were coming along. Do either of you have an estimated completion date?

Thank you,
