**Subject:** RE: Stanshaw & Irving Creeks

Hi Stormer-

Attached is a copy of flow data record for the lower and mid-Klamath. It is organized by watershed, by river mile, and by year. This data set was collected through our collaborative effort with staff from the Karuk Tribe (T Soto) and Klamath NF (J Grunbaum). There maybe some results missing from our partners from 2015 to present, but this is the information I currently have on file from 1996 to 2016 related to our joint effort.

Please take a look at those findings from Stanshaw and Irving and let me know if you have any questions. Unfortunately, we were not able to obtain a lot of tributary flow data during 2015 and 2016.

**Subject:** RE: Stanshaw & Irving Creeks

These are approximate placement locations....

Stanshaw Creek (41.476339, -123.508554). Site location is about 90' downstream of the HWY 96 bridge outlet.

Irving Creek (41.468407, -123.497679). Site location is about 100' downstream of HWY 96 and adjacent to private parcel.

I will get you the logger data once it is pulled on Stanshaw Creek for this year. I do not have any previous year's water temp data for these 2 site locations.

**Subject:** RE: Stanshaw & Irving Creeks

Mr. Cyr:

Can you provide me the GPS locations of the data loggers so that I can visually see where the data is collected? I am very interested in this year's data logger data on Stanshaw Creek and Irving Creek as well.

Thanks

Stormer

Stormer and Toz-

Sorry about the delay. Attached is some of the H2O temp data you requested for both Irving and Stanshaw Creeks.

FYI, I still have a logger out on lower Stanshaw. We tried to get it out last Friday. Unfortunately, flows were still up, visibility poor and it was lodged. I will pull it once the flow settles and will get you that information as well. Let me know if you have any questions.

**Note:**

1 - "**Stream Mile**" is the lineal distance upstream from the streams' confluence with a larger stream.

2 - "**Total acreage of the watershed**" for the listed "STREAM" in which flow measurements were taken.

3 - In most, but not all cases, **flow measurements were taken a short distance upstream of the "STREAM"s' confluence with a larger stream**.

4 - Stream velocities were measured with the following instruments: **Marsh-McBirney** (Orleans RD prior to 2001); **Swoffer** (Orleans RD after 2001 and all others).
