I. INTRODUCTION 1

II. FACTUAL BACKGROUND 3

III. THE SWRCB HAS NO AUTHORITY TO DETERMINE RIPARIAN OR PRE-1014 WATER RIGHTS OR TO ISSUE A CEASE AND DESIST ORDER AGAINST SUCH RIGHT HOLDERS 4

IV. THE MUSSI/PAK PROPERTIES ORIGINALLY ABUTTED A NATURAL WATERWAY AND HAVE ALWAYS MAINTAINED ACCESS TO WATER THUS INDICATING AN INTENT TO PRESERVE A RIPARIAN RIGHT. ... 6

 A. The Evidence Clearly Shows the Existence of Duck Slough and Precludes the SWRCB From Adopting The MSS Parties' Position 7

 B. Other Evidence Clearly Indicates Duck Slough Extended Along the Properties of Mussi/Pak. 12

 C. A Riparian Landowner May Change His Point Of Diversion From A Slough To An Interconnected River, And Vice Versa. 22

 D. A Landowner May Possess, And Simultaneously Exercise Both Riparian And Appropriative Rights On The Same Parcel Of Land. 24

 E. Certificates Of Purchase Cannot Be Relied Upon To Demonstrate Severance Of Riparian Rights. 24

 F. Contrary To The MSS Parties' Assertions, The Deeds In The Chain Of Title Show That The Mussi/Pak Properties Both Abutted Duck Slough. 26

V. MUSSI/PAK PROVIDED SUFFICIENT EVIDENCE TO SUPPORT PRE-1914 RIGHTS. 27

 A. Proof Of A Pre-1914 Right Requires Only That Water Be Put To Use, And Such Right Can Develop Over Time 27

 1. Elements Necessary To Establish A Pre-1914 Water Right 27

 B. Once A Prima Facie Case For A Pre-1914 Right Is Shown, The Burden Shifts To Other Parties Alleging Loss Or Abandonment 28

 C. SWRCB Requires Evidence Of A Pre-1914 Water Right Be Interpreted In The Light Most Favorable To Mussi/Pak 29

 D. The Doctrine of Progressive Use And Development Allows WIC's Pre-1914 Water Right To Increase Over Time. 29

 E. Mussi/Pak Presented Substantial Evidence That Water Was Put To Use Prior To 1914 Thus Establishing a Pre-1914 Water Right 30

1	F.	MSS' Argument That The Case Of Woods Irrigation Company v. The Department of Employment Estopps WIC From Claiming Its Own Water Rights Is Legally And Factually Incorrect.	32
2			
3	1.	WIC's Pre-1914 Rights are not Precluded by Collateral Estoppel Because the Required Elements for Collateral Estoppel are not Present	32
4			
5	2.	WIC's Pre-1914 Water Right Cannot Be Barred By Res Judicata/Claim Preclusion	34
6			
7	3.	WIC's Pre-1914 Water Right Cannot Be Barred By The Doctrine of Judicial Estoppel	34
8			
9	4.	Any Assertion That WIC Cannot Assert Its Pre-1914 Water Rights Before The SWRCB Because The California Supreme Allegedly Has Exclusive Jurisdiction Is Incorrect	35
10			
11	VI.	MSS PARTIES WITNESS MR. WEE'S TESTIMONY IS UNRELIABLE BASED ON THE PRESENTATION OF INACCURATE INFORMATION AND A FAILURE TO EXPLAIN THE SAME.	36
12			
13	VII.	THE LANGUAGE IN THE RELEVANT DEEDS PRESERVED A RIPARIAN RIGHT FOR MUSSI/PAK	38
14			
15	A.	The Riparian Water Rights For The Mussi and Pak Lands Were Retained In The Parcels That Were No Longer Contiguous To A Water Course Due To The Language In The Deeds In All Alleged Severances	38
16			
17	1.	Hereditaments Language Within Deeds Conveyed Riparian Rights To Parcels Separated From The Watercourse	39
18			
19	2.	Reference To Hereditaments Language In The 1972 Case <i>Murphy Slough</i> Is Distinguishable	40
20			
21	3.	Intent Of Parties Prevails, Derived From Extrinsic Evidence And the Deed Itself	40
22	B.	Once Riparian Rights Have Been Retained To Lands Separated From The Waterways The Riparian Rights Do Not Need To Be Mentioned Or Retained In Future Deeds	41
23			
24	C.	The Amount Of Water In A Stream Has No Bearing On Determining If The Tract Is Riparian	42
25			
26	D.	Partition Does Not Sever The Riparian Lands	42
27	VIII.	ALL OF THE MUSSI AND PAK LANDS ARE RIPARIAN TO THE DELTA POOL	42
28			

1	IX.	DAMMING OF SLOUGHS AND OTHER WATERCOURSES	
2		BY WAY OF CONSTRUCTION OF LEVEES WITH OR WITHOUT	
3		FLOODGATES DOES NOT CHANGE THE CHARACTER OF THE	
		WATERCOURSE OR THE RIPARIAN STATUS	
		<u>OF THE LANDS CONTIGUOUS THERETO</u>	44
4	X.	THE ARTIFICIAL CHANGES TO NATURAL SLOUGHS AND	
5		THE CANALS, DITCHES AND BORROW PITS CONSTRUCTED	
6		AS A PART OF OR AFTER RECLAMATION ARE WATERCOURSES	
		<u>TO WHICH RIPARIAN RIGHTS ATTACH</u>	45
7	XI.	THE SEVERANCE OF RIPARIAN WATER RIGHTS FROM	
8		SWAMP AND OVERFLOWED LANDS OF THE DELTA IS BOTH	
		<u>CONTRARY TO LAW AND PHYSICALLY IMPOSSIBLE</u>	46
9	XII.	EQUITABLE ESTOPPEL FORECLOSES ANY OPPORTUNITY FOR	
10		THE SWRCB TO CONTEST THE RIGHTS OF OWNERS OF	
		RECLAIMED SWAMP AND OVERFLOWED LANDS TO WATER	50
11	XIII.	THE HYDROLOGIC CONNECTION BETWEEN THE SHALLOW	
12		GROUNDWATER AND THE SURFACE STREAMS AFFORDS MUSSI	
		AND PAK & YOUNG RIPARIAN AND/OR OVERLYING RIGHTS TO	
		DIVERT DIRECTLY FROM THOSE STREAMS.	52
13	A.	The Shallow Groundwater Is In "Immediate Connection" With The Surface	
14		Streams And, Hence, The Landowners Overlying That Groundwater Are	
		Riparian To Those Streams.	
		53
15	B.	Assuming <i>Arguendo</i> That The Shallow Groundwater Is <i>Not</i> In "Immediate	
16		Connection" With The Surface Streams, The Landowners Overlying That	
17		Groundwater Still Have The Right To Divert Directly From Those Streams	
		Within The Scope Of Their "Overlying Rights."	
		55
18	C.	In A Common Underground/Surface Supply Situation It Should Be Deemed	
19		To Be Within The Scope Of A Landowner's Coequal And Correlative Rights	
20		To That Common Supply To Divert From The Surface Component Of That	
		Supply In The Absence Of Injury To Others With Rights To That Supply.	
		56
21	D.	The Requested Determination Would Be Fully Consistent With The Well-	
22		Established "No-injury Rules" Set Forth In Case Law And Statutory Law	
		With Regard To Changing Points Of Diversion From A Common Supply.	
		58
23	XIV.	WHEN WHITNEY SEPARATED HIS LANDS FROM THE BANKS	
24		OF VARIOUS WATERWAYS HE RETAINED THE MUSSI	
25		PARCEL'S RIPARIAN RIGHTS TO THOSE WATERWAYS.	61
26	A.	Whitney Retained The Mussi Parcel's Riparian Rights To The San Joaquin	
		River, Trapper Slough, Whiskey Slough And Black Slough.	
		62
27	XV.	WHEN WHITNEY SEPARATED HIS LANDS FROM THE	
28		BANKS OF VARIOUS WATERWAYS HE RETAINED THE PAK AND	
		YOUNG PARCEL'S RIPARIAN RIGHTS TO THOSE WATERWAYS.	63

1 **I. INTRODUCTION**

2 The present hearings are considering whether to issue Cease and Desist Orders against
3 Mussi et. al. ("Mussi") and Pak and Young ("Pak") (sometimes collectively "Mussi/Pak). This and
4 the other concurrent hearings present a significant amount of information regarding the conditions
5 of the Delta during the late 1800's and early 1900's. The records of these hearings provide a wide
6 range of information. However, Mussi/Pak's position can only fail if the Board makes evidentiary
7 decisions which are contrary to known practices or common sense.

8 Thus, Mussi/Pak fails only if the Board finds that those who reclaimed the lands of the
9 Delta made decisions against their own interests and against normal agricultural practices. It is
10 only if those who reclaimed the land decided to only partially drain the swamp and overflowed
11 lands, decided to not use old sloughs for irrigation, decided to not irrigate with the easily available
12 water supply, decided to "dry farm" without using available water, decided to abandon old sloughs
13 rather than keep them connected to the neighboring waterways, decided to agree to provide water
14 to lands without actually doing so, and decided to minimize crop production by relying on the
15 vagrancies of the weather rather than irrigation.

16 The Board can either decide that it will believe/rely on some evidence (especially maps)
17 and ignore other (as asserted by the MSS parties), or it can decide to interpret all the offered
18 evidence and reconcile the differences between them. The former would make much of the
19 historic record "false" while the latter would provide a comprehensive picture of the Delta's
20 history.

21 Intervenors (hereinafter "MSS parties" attempt to make this proceeding one of attack,
22 destruction and revenge. Rather than address the causes of the decline of the Delta and expose
23 their water rights to current and future obligations to superior rights and to the environment, they
24 choose to try to destroy in-Delta water users. Exports kill fish, alter Delta inflow, radically change
25 flow patterns, and suck channels dry. Upstream interests decrease downstream flow while ignoring
26 obligations for downstream rights and fishery needs on the San Joaquin River and in the Delta.
27 The policies of these parties? To destroy in-Delta interests so they need not acknowledge superior
28 rights or the adverse effects of their own operations. The irony of it all is that if they are successful

1 in putting Delta agriculture out of business, the area would revert to natural conditions and
2 consume more water than is currently used (Mussi Exhibit 9, pages 5-6, 9E, 9G).

3 Unfortunately, the SWRCB has joined this illogical attack making an examination of Delta
4 water rights one of its priorities while ignoring clear permit and water right violations of the
5 Intervenor. How these decisions are made cannot be discerned, but the preferences and biases of
6 the Board are clear; a shortage of water for exporters must be addressed even if it means taking
7 water away from others. A worse plan for California's future could not be imagined.

8 A few comments about the Intervenor is appropriate. First, it appears that there can be no
9 harm suffered by Modesto Irrigation District. MID has no downstream obligations for water
10 quality objectives or other required water flow related criteria. MID sometimes makes releases
11 under the San Joaquin River Group Authorities' San Joaquin River Agreement which, in many
12 years, provides water to meet the USBR obligation for Water Quality Objectives for Fish and
13 Wildlife Beneficial Uses. However, as specifically requested by MID and other SJRGA parties in
14 the D-1641 hearings, the water provided by MID for these purposes is "abandoned" at Vernalis
15 (see for example No.1 on page 166 of D-1641).

16 Once "abandoned," this water is available for many other uses and can be diverted by many
17 other users. In fact, the water is "abandoned" so that DWR and USBR can export it if conditions
18 and permit requirements allow. When export operations cannot take advantage of these
19 "abandoned" flows, the water is counted as "lost exports" allowing for later recoupment. Under
20 this scenario, it is difficult to determine what harm could occur by diversions to the Mussi/Pak
21 properties.

22 As to San Luis Delta-Mendota Water Authority and the State Water Contractors, they
23 allege that diversions by Mussi/Pak limit their water supply and increase the projects burden to
24 meet water quality objectives, which also decreases their water supply. No such injury has been
25 alleged. Regardless of current rights, any diverter in the area should be able to get a supply
26 contract from either DWR or USBR. Negotiations for just such a contract with DWR are ongoing,
27 though DWR has not met with or proposed anything for over a year.

28

1 **II. FACTUAL BACKGROUND**

2 A brief background is helpful. The Pak property lies on the north and west side of Inland
3 drive and is therefore on Lower Roberts Island. The Mussi property is on the east side of Inland
4 Drive and therefore on Middle Roberts Island (see Pak Exhibit 3A, Mussi Exhibit 3A). Roberts
5 Island is a large tract of land lying generally between the San Joaquin River and Middle River. [For
6 reference see Pak Exhibit 3U]. Much of Roberts Island was Patented from the State of California
7 to J.P. Whitney in 1876. Thereafter, the central portion of the island was sold to M.C. Fisher in
8 1877 who in turn sold the relevant portions of Middle Roberts to it to Stewart, King and Bunten
9 also in 1877, and the relevant portions of Lower Roberts to the Glasgow California Land Company
10 also in 1877. Over the years 1889 - 1892, the Woods brothers, J.N. Woods and E.W.S. Woods
11 purchased over 8,000 acres of Middle and Lower Roberts Island. The Pak property was sold to the
12 Woods Bros. in 1896, while the Mussi Property was sold to Mr. Vasquez in 1891 (and was never
13 owned by the Woods).

14 The Woods Brothers were noteworthy farmers in early California, first owning lands in the
15 southern San Joaquin Valley, then moving to the Delta where they were important players in the
16 final reclamation of the island. After having developed their Roberts Island lands for agricultural
17 purposes, J.N. Woods died in 1906 which resulted in the jointly held lands being separated in a
18 roughly east/west split, with E.W.S. Woods retaining the western portion and J.N. Woods' heirs
19 the eastern. It appears J.N. Woods' heirs (Jessie L. Wilhoit and Mary L. Douglass "Wilhoit and
20 Douglass") preferred to sell their lands rather than farm them. Consequently, the parties formed a
21 corporation and entered into a number of agreements to facilitate the subdivision of the heirs lands.
22 In 1909 they created WIC. During this time the Woods lands were already served by an irrigation
23 and drainage system. In 1911, the parties then entered into two similar agreements; one wherein
24 WIC promised to furnish water and drainage services to the lands owned by E.W.S. Woods and the
25 other for the lands owned by Wilhoit and Douglass. The agreement with E.W.S. Woods covered
26 the Pak property, but the Mussi (Vasquez) property was not originally subject to either agreement.
27 These agreements committed WIC to provide such services to parcels of 40 acres or larger. The
28 next day, they entered into agreements whereby these same landowners granted WIC the necessary

1 easements to maintain and operate the canal system for the irrigation and drainage. Thereafter,
2 Wilhoit and Douglass sold their properties in 40 acre or larger parcels.

3 Over time, E.W.S. Woods eventually sold of his lands also. Eventually, the owners of both
4 the Pak and Mussi properties formed their own private district to supply water to theirs and others'
5 lands.

6 **III. THE SWRCB HAS NO AUTHORITY TO DETERMINE**
7 **RIPARIAN OR PRE-1014 WATER RIGHTS OR TO ISSUE A**
8 **CEASE AND DESIST ORDER AGAINST SUCH RIGHT HOLDERS.**

9 The State Water Board is considering the issuance of a cease and desist order against
10 Mussi/Pak. The draft Cease and Desist Order (CDO) issued on December 28, 2009 and the
11 prosecution team's (hereinafter "PT") presentation during the pending hearing recognizes that Duck
12 Slough, a natural waterway abutted with properties as of 1911. The PT however did not have
13 enough information to conclude that a riparian right was preserved up through the time the parties'
14 current diversion system was installed (1925). The dispute therefore is to whether evidence exists
15 confirming a riparian or other water right.

16 The draft CDO alleges that the CDO may be issued pursuant to Water Code section 1831
17 due to the unauthorized diversion, collection and use of water in violation of section 1052 of the
18 Water Code. Water Code sections 1831 and 1052 do not grant the Board the authority to issue
19 CDOs against Woods exercise of its pre-1914 water rights or the exercise of riparian water rights
20 by property owners within Woods.

21 The Board's own literature states that the it "does not have the authority to determine the
22 validity of vested rights other than appropriative rights initiated December 19, 1914 or later."
23 Exhibit 1 to County's Request for Official Notice at p.7-8; *Natural Res. Def. Council v.*
24 *Kemphorne* (2009) 621 F. Supp.2d 954, 963. Numerous Board water rights decisions and orders
25 indicate that the Board has no power to adjudicate riparian and pre-1914 water rights and that the
26 Board has no jurisdiction to validate riparian rights or pre-1914 appropriative rights; such a
27 determination is only within the purview of a court of law. D 934 p. 3; D 1282 p. 7; D1290 p.
28 32; D1324 p. 3; D 1379 p. 8. The Board has no such authority in any proceedings which will result

1 in the Board making such determinations, including the instant CDO proceeding. Such
2 determinations regarding riparian and pre-1914 water rights can only be made by a court of law.

3 While the Board does have some measure of enforcement authority over riparian and pre-
4 1914 water rights, that authority is limited to actions involving waste, unreasonable use or
5 diversion, lack of a beneficial use, or protection of public trust resources (Wat. Code § 275), none
6 of which are alleged in the pending CDO (Exhibit PT-7) and such enforcement authority is not
7 necessarily exercised in the form of a CDO. Similarly the pending CDO is not the result of a
8 petition for a statutory adjudication or a referral from a court.

9 The Board's authority to issue cease and desist orders is limited to the specific situations
10 authorized and enumerated in Water Code section 1831. Subsection (e) of section 1831
11 specifically provides that this Article does not authorize the board to regulate in any manner the
12 "diversion or use of water not otherwise subject to regulation of the Board under this part." A
13 complete review of every section in Part 2 of Division 2 reveals no authority of the Board to
14 regulate claimed riparian or pre-1914 water rights in the manner of a CDO. *People v. Shirokow*
15 (1980) 26 Cal.3d 301, clearly indicates that riparian and pre-1914 water rights are not subject to
16 compliance with the statutory appropriation procedures in Division 2 of the Water Code. Contrary
17 to the CDO, both the Board and *Shirokow* acknowledge that riparian and pre-1914 water right
18 holders cannot be found to have violated any of Division 2's statutory appropriation procedures
19 because those procedures simply do not apply to the exercise of such rights.

20 The *Racanelli* case indicates that in carrying out its authority, the Board does indeed make
21 some determinations related to riparian and pre-1914 water rights. However, these determinations
22 are limited to particular administrative processes and do not affect riparian and pre-1914 water
23 right holders. The Board plays only a "limited role" in "enforcing rights of water rights holders, a
24 task mainly left to the courts." *United States v. State Water Resources Control Board* (1986) 182
25 Cal.App.3d 82, 102.

26 As explained in *Racanelli*, where the Board lacks the authority to determine or affect
27 riparian water rights and prior appropriative rights, including pre-1914 rights, when the Board is
28 called upon to determine the availability of surplus water for purposes of issuing new appropriative

1 rights; and when, in a statutory adjudication, the Board's determinations *are merely*
2 *recommendations* that must be approved by a court, then it is evident that the Board cannot make
3 such water rights determinations generally, such as in the present matter. The Board's attempt to
4 do so in the pending CDO, which are not court adjudication proceedings, is outside the scope of
5 the Board's authority, and as such, contrary to law.

6 **IV. THE MUSSI/PAK PROPERTIES ORIGINALLY ABUTTED A NATURAL**
7 **WATERWAY AND HAVE ALWAYS MAINTAINED ACCESS TO WATER**
8 **THUS INDICATING AN INTENT TO PRESERVE A RIPARIAN RIGHT.**

9 The draft CDO's seek evidence of a water right to support the diversions of Mussi and Pak.
10 Their diversions are for agricultural purposes on 70.18 and 40 acres of land respectively located on
11 Roberts Island. As stated above, the Mussi property is east of and abuts Inland Drive (the
12 approximately line of Duck Slough/High Ridge Levee) and is thus on Middle Roberts Island, while
13 the Pak property is on the (north)west side of and abuts Inland Drive, and is thus on Lower Roberts
14 Island. Both their diversions are supplied by a privately owned diversion facility known as the
15 Woods Robinson Vasquez ("WRV") district. That joint operation was not formed or created under
16 any district or water purveyor statutes. It is simply a jointly owned and operated diversion system.

17 Mussi/Pak each assert that they have preserved a riparian water right, though also claim a
18 pre-1914 water right. For purposes of this section of this closing brief, we will review the facts
19 supporting the riparian water right. Briefly, Mussi/Pak assert that their property abutted a number
20 of waterways (including Duck Slough) up until such time as other conditions or improvements
21 secured a separate method of delivering water to their lands, and such other conditions or
22 improvements indicate an intent to preserve the riparian water right.

23 For the Pak property, it abutted Duck Slough up until the execution of a September 29,
24 1911 contract to furnish water (Pak Exhibit 3Q), which contract preserved the ability to deliver
25 water to the property. Per the SWRCB finding in the Term 91 cases (WR2004-0004), such a
26 contract shows sufficient intent to indicate the preservation of that riparian water right. In fact, the
27 subject contract was the second of two executed on that same date which bound Woods Irrigation
28 Company to provide water to certain lands owned by E.W.S. Woods and the lands of the heirs of
his brother J.N. Woods; one of which contracts was central to the Term 91 case. The Pak property

1 was at that time owned by E.W.S. Woods. Eventually, the Pak property obtained the ability to
2 receive water from the WRV district, indicating an unbroken ability to provide water to the
3 property, and thus preserving the riparian water right.

4 For Mussi, his property was not owned by the Woods Bros., and not subject to either
5 contract to furnish water. However, the evidence shows that not only was the property abutting
6 Duck Slough, but always maintained the ability to, and did receive receive water from Woods
7 Irrigation Company up through the time the WRV district began operating. These facts too
8 indicate an intent by the landowners to maintain and preserve the ability to provide water to the
9 property, and thus preserving the riparian water right.

10 **A. The Evidence Clearly Shows the Existence of Duck Slough and Precludes the SWRCB**
11 **From Adopting The MSS Parties' Position.**

12 Central to both cases is the existence and extent of Duck Slough. The PT agreed with
13 Mussi/Pak regarding the existence and extent of the slough up through 1911 (PT-01, page 2, RT
14 Vol. III, page 688, 689). The MSS parties, though acknowledging the existence of Duck Slough at
15 onetime, generally asserted it did not reach either the Mussi or Pak properties, was severed from
16 main channels and that it was eventually filled in and did not contain "natural" water and thus did
17 not confer any riparian rights (see generally MSS-R-Wee). Before reviewing the extensive
18 evidence regarding Duck Slough, we will first show how the MSS parties are necessarily wrong in
19 their conclusion that Duck Slough did not extend to the Mussi/Pak properties. Because the MSS
20 parties have incorrectly described Duck Slough, the SWRCB should view all of their evidence in
21 an unfavorable light.

22 Mussi/Pak assert that Duck Slough extended from Burns Cut-off to Middle River, and
23 existed through 1928 (Pak Exhibit 3, page 7; WIC Exhibit 4, 4B)¹ and beyond . The PT agrees, up
24 through 1911. An extremely large amount of information was presented on this issue in all the
25 CDO hearings. To better understand the evidence and decision regarding Duck Slough, Board
26 Members should first look at Mussi and Pak Exhibits 3A, 3N and 3O to get an accurate view of the

27
28 ¹ Mussi/Pak refer to a few exhibits in the WIC hearing. A request for judicial notice of
those matters is included herein.

1 relevant features on Roberts Island. Duck Slough follows a southwest line roughly from Burns Cut
2 Off to Middle River. Along this same line, a feature known as High Ridge existed, having been
3 built up by alluvial deposits from the flow in Duck Slough (Mussi Exhibit 1, RT Vol. I, pages 211
4 et seq., and pages 304, et seq.). Eventually, High Ridge was improved as a permanent structure,
5 being thereafter called “High Ridge Levee” or sometimes “Cross Levee.”

6 To agree with the MSS parties that Duck Slough did not about the Mussi/Pak properties, *one*
7 *must conclude that the Engineers of the US Army (predecessor of US Army Corps of Engineers)*
8 *and the California State Engineer both incorrectly drew the location and length of Duck Slough*
9 *on official maps the later of which is dated 1895.* The MSS parties assert that the slough did not
10 even go in the direction indicated by these official maps, and was leveed off and filled in. This is
11 of course an untenable position in any legal or administrative procedure. That is not to say that
12 errors do not occur in mapping, but when a number of old official sources specifically identify a
13 waterway, there is no basis for concluding it did not exist.

14 The confusion (as fomented by the MSS parties) stems from the fact that many old maps of
15 the Delta do not include all features. As explained in the testimony of Mr. Neudeck [CITE], many
16 maps are prepared for specific purposes and thus do not include things not germane to those
17 purposes. In addition, drafters are not all surveyors, and may not accurately delineate a feature.
18 Finally, map makers might simply use other information or incomplete sources rather than actually
19 surveying a feature. However, when the State Surveyor and the (predecessor to the) Corps of
20 Engineers produce maps of the Delta, one can only conclude they have done an accurate job,
21 within the capabilities of the era.

22 With this in mind, we turn to the relevant maps evidencing the MSS parties mistaken
23 conclusions. In the Mussi/Pak hearing the Respondents produce rebuttal Exhibits R-30 and R-40.²
24 The former is a map produced by William Hammond Hall, the California State Engineer for many
25 years. It is located in the State Archives, under the category “State Engineer-William Hammond
26 Hall Papers” and is identified as 5290-18, entitled “Grand Island and Suisun Bay to Foothills and
27

28 ² These maps were located only after the deadline for submitting testimony in this and the
other hearings had passed.

1 1st Standard North.” It is dated therein as “ca 1880's.” (see Mussi Exhibit R-30). The map clearly
2 shows a labeled Duck Slough extending from Burns Cut-off in a southwesterly direction towards
3 Middle River. Per the mapping and testimony produced by Mussi/Pak, this feature runs along and
4 abuts each property. This issue of abutting is discussed hereinbelow.

5 The latter map referenced above is contained in a letter to Congress by the Secretary of War
6 and Chief Engineer of the Army, dated January 10, 1895 (while the official Congressional
7 document is dated January 22, 1895). The document contains a survey of Old River (in the Delta)
8 and deals with a proposal to dredge portions thereof under a river and harbor act of 1894. The map
9 attached to the letter contains a portion of Old River and specifics regarding the proposed dredging
10 with an inset placing the subject portion of Old River in context with the Delta. These documents,
11 including a blow-up of the inset map was provided as Mussi Exhibit R-40. That inset map clearly
12 shows Duck Slough extending along the same line as the Hall map, though not quite as far.
13 Clearly these two maps show Duck Slough well beyond the time Mr. Wee alleges it no longer
14 existed and in places Mr. Wee alleges it did not exist.

15 One might speculate that these maps do not reflect conditions/feature as of their dates, or
16 are mistakes, or (as suggested by counsel for MSS parties on cross-examination) that they might be
17 drafts. However, that is indeed speculation. There is no evidence whatsoever supporting such
18 assertions. We cannot be absolutely sure of the date of a map labeled “ca. 1880's” or of one
19 attached to a 1895 letter. However, absent contrary evidence, the maps must be taken at face
20 value; that is to say, sometime between the 1880's and 1895 the State Engineer and the Chief
21 Engineer of the Army believed Duck Slough existed; and that it extended from Burns Cut-off all
22 the way to the Mussi and Pak properties. This is very important because the MSS witness Mr.
23 Wee³ concluded that Duck Slough *never* extended this far or in that direction (MSS-R-Wee page
24 5), and was gone by the time Upper Roberts Island (at the time including Middle Roberts) was
25 finally reclaimed between 1875 and 1877. Mr. Wee’s conclusions are necessarily incorrect.

26
27
28 ³ In general, the Board should give no credence to much of Mr. Wee’s testimony for
the reasons described in VI. below.

1 Mr. Wee concludes that Duck Slough extended no farther than 1-2 miles⁴ off of Burns Cut-
2 off, relying on a statement by Mr. E. E. Tucker (an engineer) who notes the “head” of Duck Slough
3 is approximately two miles from Burns Cut-off (MSS-R-Wee, page 12, Exhibit 33). However, that
4 statement cannot be reconciled with Mr. Wee’s own exhibits referenced above. His maps (MSS R-
5 Wee Exhibits 17A-19B) all show significant portions/tributaries of the slough extending at least
6 twice this distance. See for example Mussi R-23, R-24, RT. Vol. IV pages 764 et seq. These maps,
7 which predate the State Engineer’s and (predecessor to the) Corps’ map do not show Duck Slough
8 extending towards or to the Mussi/Pak properties. Can all these seemingly contradictory maps be
9 reconciled? Yes; easily. First, the maps cited by Mr. Wee are obviously much rougher in their
10 specifics. MSS-R-Wee Exhibit 17A-C, produced by a Navy Commander is clearly not the result of
11 careful surveying. The main channels appear to be rough approximations, and the interior island
12 sloughs and channels merely lines representing the bare minimal information.

13 The other two maps MSS-R-Wee 18A-C and 19A-B are indeed much more precise.
14 However, they are mapping *pre-reclamation* lands. It would be contrary to common sense to assume
15 that the surveyors or investigators paddled their way up winding sloughs choked with tules in areas
16 that were twice daily inundated by the tides. It is clear that although they attempted to generally
17 locate main channels of the Delta, all the smaller ones are simply representations and cannot be
18 considered the result of actual surveys.

19 When the engineer Mr. Tucker locates the “head” of Duck Slough (MSS-R-Wee, Exhibit
20 33) it only be a reference to a point where numerous other channels branched off (or fed) the
21 largest portion of the slough. [Again, before reclamation the area was a tule marsh, subject to tidal
22 flows, and likely difficult if not impossible to traverse, observe or map (see RT Vol. IV, page
23 777).] Thus, some channels of Duck Slough branched off and wended their way southward into
24 the eastern portion of the Woods Bros.’ lands, while at least one significant “tributary” continued
25 on the line indicated by the State Engineer and the predecessor to the Corps; all the way to the
26

27 ⁴ Mr. Wee constantly referenced the length of Duck Slough as “1-2 miles” even though
28 all of the written sources he cites reference two miles.)

1 Mussi/Pak properties. We have no way of knowing the sizes of these various channels, but they
2 certainly existed. They certainly did not disappear as they were still being used to drain the lands.
3 These lands are below sea level and the ground water will rise to the surface without drainage (RT
4 Vol. I, page 133, 231; Vol. II, page 412, 413). All these channels and old sloughs were the method
5 (along with the levees) by which the landowners reclaimed their lands and kept them reclaimed
6 [Mussi Exhibit 9, see RT Vol. II, pages 328-332]. Some of these channels and sloughs became the
7 main canals of Woods Irrigation Company, and another provided drainage and irrigation
8 (explained below) water along the northwest edge of much of the Woods' lands and the Mussi/Pak
9 properties. In addition, if Mr. Tucker's reference to the "head" of Duck Slough is a complete
10 statement of Duck Slough's extent, then the three branches off it identified by Mr. Wee would not
11 exist. That is to say, Mr. Tucker clearly didn't state that Duck Slough ended at any particular
12 point.

13 It cannot be overstated; Mr. Wee's conclusions about the location and extent of Duck
14 Slough cannot be reconciled with the 1880's Hall and 1895 (predecessor to the) Corps maps. The
15 only reasonable conclusion is that of the many smaller branches off (or part of) Duck Slough, one
16 extended all the way to the Mussi/Pak properties as of at least 1895. Although this portion of Duck
17 Slough was of unknown size, it could not have been insignificant given its delineation of the
18 (predecessor to the) Corps' and State Engineer's maps. MSS parties response: that the words
19 "Duck Slough" were meant to cover only the upper end of the channel marked, the rest of the line
20 was the High Ridge Levee. This theme was echoed a number of times by the MSS parties'
21 witnesses, especially Mr. Wee. However, he could never explain why someone would draw a line
22 to designate a levee, but only have the line traverse *part*, not all of the levee (see for example RT
23 Vol. IV, page 772). According to Mr. Wee, the entire length of the Cross levee which now follows
24 the same line as Duck Slough, was completed in 1877 but the later, conflicting maps drew a line
25 along only a portion of that levee; mysteriously leaving the rest of the levee unmarked. Per Mr.
26 Wee, the long line *could not have been* the slough even when the map designated the line as Duck
27 Slough (Mussi R-30)! Such interpretations and conclusions are beyond consideration; they simply
28 fly in the face of logic. Why would one draw a line to designate a levee but then only show a

1 portion of the levee's length? Mr. Wee and the MSS parties conclusions about Duck Slough are
2 therefore wrong.

3 **B. Other Evidence Clearly Indicates Duck Slough Extended Along the Properties of**
4 **Mussi/Pak.**

5 Mussi/Pak offered a number of witnesses and evidence confirming the existence and extent
6 of Duck Slough. As a starting point, Mr. Nomellini testified at length regarding the practices
7 associated with reclaiming the subject lands [Mussi Exhibit 9, see RT Vol. II, pages 328-332]. He
8 first noted that any sinuous feature on a Delta Island is the result of the farmers adjusting to the
9 natural features of the land. Thus curved lines do not indicate a farmer's preference or whim in
10 marking and working fields, it indicates that an old slough or other waterway existed, around
11 which the farmers operated.

12 These old sloughs were an integral part of the reclamation and farming process. Once the
13 island (or portion thereof) was leveed off, the landowners used the natural channels within the
14 leveed off area to drain the lands. Thus, at the junction of the levees and the old sloughs, sluice or
15 flood gates were installed when leveeing took place. When the tide went out, the gates could be
16 opened and the waters on the island allowed to drain out. This of course was the most economical
17 method for drainage given that the natural drains (the sloughs) were already in place. Farming
18 required a controlled application of water; local Delta farmers did and could not simply rely on the
19 shallow groundwater seeping back up for irrigation (RT Vol. IV, pages 806-807). As a
20 consequence, the landowners also operated the flood gates to allow rising tidal flow into the
21 islands and onto the lands to for irrigation. [Mussi Exhibit 9, see RT Vol. II, pages 328-332] This
22 dual function of the flood gates was a cornerstone of early Delta reclamation and farming. Mr.
23 Nomellini showed existing evidence of such flood gates and testified about that dual use.

24 Next Mussi/Pak presented Mr. Ken Lajoie, a retired USGS Quaternary geologist. He was
25 asked to apply his expertise in fluvial geomorphology to map the historic sloughs in the subject
26 area. His testimony is Mussi/Pak Exhibit 1. After explaining the process followed, Mr. Lajoie
27 presented a number of figures attached to his testimony. His work started with and added to that
28 done by Brian Atwater who produced Geologic Maps of the Sacramento-San Joaquin Delta in

1 1982 for the USGS. At the time, Mr. Lajoie had been the supervisor of Mr. Atwater. RT Vol. I,
2 page 221. Mr. Atwater's maps had been the first comprehensive mapping of historic sloughs in
3 the Delta.

4 Figure 6 of Exhibit 1 shows the contours of the land features, from which Mr. Lajoie
5 identified natural drainage channels of the area. Figure 9 shows the alluvial soil types, which
6 closely matched the higher contours of Figure 6. From this information, Mr. Lajoie was able to
7 conclude that Duck Slough was a main distributary channel off of Middle River, meaning that it
8 carried high flows off that channel. By noting the extent of the alluvial deposits, Mr. Lajoie could
9 conclusively show that Duck Slough was formed by this downstream flow from Middle River,
10 because the amounts of alluvial deposits decreased in the downstream direction. [RT Vol. I, page
11 304, 305]

12 He was also able to identify smaller tributary channels to Duck Slough, indicating that
13 certain areas drained into the Slough (Mussi/Pak Exhibit 1, text page before Figure 9). This
14 information closely reflected Mr. Atwater's mapping, excepting that Mr. Lajoie was able to discern
15 additional waterways and the direction of flow. Using current sources including maps and San
16 Joaquin County Assessor maps, Mr. Lajoie was able to match the geologic record with the historic
17 one. Pertinent to this matter, Mr. Lajoie was able to conclude that not only was Duck Slough a
18 major historic waterway, but that it continued to exist through the modern time.

19 The cross-examination of Mr. Lajoie attempted to question his sources and methods of
20 investigation. Mr. Lajoie answered every such question in a manner that refuted any substantive
21 claim that he might have been mistaken. [See, for example, RT Vol. I, page 311-312.] The MSS
22 parties also tried to focus on the fact that the Atwater maps and Mr. Lajoie initially was focused on
23 pre-1850 features. However, Mr. Lajoie clearly indicated that he was able to match those earlier
24 features with historic ones.

25 Oddly, the MSS parties tried to rebut Mr. Lajoie's testimony through Mr. Jack Meyer, a
26 "geoarchaeologist" who has a degree in sociology and anthropology. His direct testimony suggests
27 no Duck Slough did or could exist in the area of the Mussi/Pak properties (RT Vol. IV, pages 858
28 et seq.). However, the cross-examination revealed he did not support his own assertions (RT Vol.

1 IV, pages 933 et.seq.). After presenting a number of exhibits attached to his MSS R-9, it appeared
2 that his conclusions boiled down to two things. First, because he was aware of a native-American
3 site (the location of which he could not disclose) somewhere near the elevated alluvial deposits
4 along the line which Duck Slough traversed, he concluded that there could have been no flow there
5 as the native-Americans would not be camped on wet ground or in a stream. This simplistic and
6 unrealistic conclusion was shown to be just that when on cross-examination he admitted that the
7 native-American camp could simply have been next to, not in the channel. (RT Vol. IV, pages
8 961-962.)

9 Mr. Meyer's second main conclusion was that he had identified the areas soil types and that
10 Duck Slough was created by flow from Burns Cut-off, not from Middle River, and that he didn't
11 think a channel branched off Middle River. Amazingly, Mr. Meyer presented an unreadable copy
12 of the Holt map produced by Mr. Atwater in support of his conclusions (MSS R-9, page after
13 Figure 11). However, when asked on cross-examination to examine the full size Atwater map, it
14 was shown that Atwater indicated flow from Middle River, along the Duck Slough line asserted by
15 Mussi/Pak (RT Vol. IV, pages 943-945). Even when confronted with the (predecessor to the)
16 Corps map (Mussi/Pak R-40) Mr. Meyer could not bring himself to admit Duck Slough ran to the
17 Mussi/Pak properties (RT Vol. IV, pages 940-942). It was clear to everyone who listened to Mr.
18 Meyer that his testimony added no useful or substantive material, or that he was in anyway
19 qualified to make conclusions about historic Delta channels.

20 Mussi/Pak then presented Mr. Don Moore, a registered geologist and certified hydrologist
21 who is also an expert in aerial photography and the interpretation of such photos. (Mussi Exhibits
22 2 and 2A) Mr. Moore worked in conjunction with Mr. Lajoie as they examined and interpreted
23 aerial photos of the subject area.⁵ Mr. Moore reviewed 1937 and 1940 aerial photographs, the
24 1913 USGS Quadrangle Map, San Joaquin County Assessor maps and other historic information
25 including maps of WIC. (see Mussi Exhibit 2). From all this information, Mr. Moore concluded
26

27 ⁵ The cross-examination of Mr. Lajoie and Mr. Moore attempted to suggest that using
28 various methods to enhance and interpret aerial photos by them somehow altered the data. Each
was able to easily explain the common and accepted practices of such work and how none of their
efforts created, altered or deleted information. CITE]

1 that the significant fluvial features still showing on 20th Century photographs indicated that Duck
2 Slough had been a major water course (Mussi Exhibit 2, page 6).

3 Later in the hearing Mr. Moore discussed and presented Mussi/Pak Exhibits R-22-R-28 and
4 R-30. By comparing known features such a irrigation and drainage ditches from various maps of
5 the Woods Bros. Lands and the Woods Irrigation Company, Mr. Moore was able to match the
6 historic sloughs to those ditches and canals. Mr. Moore showed that the channels contained on the
7 Wee maps and the other maps of Duck Slough matched the fluvial channels on Roberts Island and
8 the Woods irrigation canals (Mussi/Pak R-23 -R27). He showed that even as of 1937, one could
9 find water in the remnants of Duck Slough. From this he concluded that those historic sloughs had
10 been simply converted to use by the landowners for irrigation and drainage purposes; just as Mr.
11 Nomellini had testified. It must be highlighted, that all the work of Mr. Moore and Mr. Lajoie
12 confirmed the water course identified as Duck Slough on the State engineer and Corps map.
13 Obviously this feature existed well in to the first part of the 20th Century.

14 Mussi/Pak next presented Christopher Neudeck, a licensed engineer and principle of
15 Kjeldsen, Sinnock and Neudeck, Engineers. Besides giving an overview of reclamation practices
16 (similar to that done by Mr. Nomellini) (Pak Exhibit 3, pages 8-10), Mr. Neudeck presented
17 mapping of the Mussi and Pak parcels through the relevant time frame of 1911-1925 (see Mussi
18 Exhibits 3A-3G and Pak Exhibits 3A-3G). The chain of title for each property was developed by
19 Mr. Thurl Pankey (see Mussi Exhibit 6A, Pak Exhibit 6A).

20 Mr Neudeck also gave a comprehensive review of the other substantial evidence supporting
21 the location and extent of Duck Slough. Two San Joaquin County Assessor maps included blue
22 lines running along either the specific or general course of Duck Slough. (Mussi Exhibit 3I and
23 3L). MSS parties tried to suggest that these blue lines did not indicate any waterway, rather they
24 must have been a representation of a levee. It is correct that only these two Assessor maps had the
25 line in blue and that other main channels were not marked in blue. However but there is no
26 apparent reason for an assessor map to include a sinuous line, marked in blue in the same location
27 as Duck Slough in order to indicate a levee. We know Duck Slough was in this location contrary
28

1 to the assertion of MSS parties (Mussi R-40). Mr. Neudeck was clear that he did not rely solely on
2 these blue lines, but used this in conjunction with other data.

3 Mr. Neudeck cited a portion of the Settlement Geography of the Delta which indicated that
4 portions of Duck Slough were actually dredged to a size of 30' by 7' (Pak Exhibit 3, 3K). The MSS
5 parties attempted to contradict this by suggesting other sources confirmed that the entire length of
6 Duck Slough was not dredged, only a small portion. However, Mr. Neudeck never alleged the
7 entire portion was dredged. The MSS parties evidence was contained in MSS- R-Wee-1-73 (which
8 corresponds to the WIC hearing exhibits MSS- R-14 and attached exhibits). In those exhibits Mr.
9 Wee provides various sources to set forth a more detailed timeline of how and when Duck Slough
10 was partially dredged. However, none of that evidence contradicts Mr. Neudeck despite Mr. Wee's
11 continued assertions to the contrary. In fact, one should note the Mr. Wee repeatedly states that the
12 dredging of Duck Slough was minimal and ineffective; statements refuted by his own exhibits (see
13 MSS- R-Wee, Exhibits MSS-R-Wee Exhibits 23-30).

14 Mr. Neudeck also presented Pak Exhibit 3N which is the *California State Engineer*
15 *Department Topography and Irrigation Map of San Joaquin County*, dated 1886. This map clearly
16 shows Duck Slough continuing from Burns Cut-off all the way past the Pak property and to the
17 Mussi property (Pak Exhibit 3, page 4). His Exhibit 3O (1894 Stockton-Bellota Drainage District
18 Map) shows Duck Slough again along this same line, now going all the way to Middle River. MSS
19 parties question the Bellota map by stating only the upper portion of the line is Duck Slough, the
20 remainder being the High Ridge levee. Although that is a possible interpretation, we also know
21 that this map is earlier in date to the Corps map of 1895 which shows Duck Slough running almost
22 this exact same length over this exact same course. It is more likely that the upper end of the line
23 is not the only extent of Duck Slough, rather it is the deeper portion which was dredged.

24 Importantly, Mr. Neudeck also presented the *USGS Holt Quadrangle Map* of 1913 (with
25 1911 data) as his Pak Exhibit 3P. This map is important because it indicates a waterway running
26 almost the entire length of Duck Slough, in the exact place of Duck Slough. This indicates that
27 this channel continued to exist up through at least the time of the 1911 Agreement to Furnish
28 Water which benefitted the Pak property. It is true that the indicated water does not extend all the

1 way to Middle River or Burns Cut-off, however, that does not mean the lands abutting it are not
2 riparian. As asserted by Mussi/Pak and as confirmed by the PT witnesses, lands can be riparian to
3 a lake or other body of non-flowing water (WIC RT Vol. I, pages 42-46). In this case, both Mr.
4 Nomellini and Mr. Neudeck confirmed that since the channel is below the surface of the land, and
5 that the groundwater in the area is at or near the surface level, the channel will always have water
6 in it. Abutting a channel that always has water certainly confers riparian rights.

7 It is not at all certain the lack of a “complete blue line” on the 1913 Quad indicates a lack of
8 connection to either Middle River or Burns Cut-off. There could just as well have been man-made
9 surface channels which connected Duck Slough to those two channels (see Pak Exhibit 3, page 6
10 and 3T), but which happened to be dry at the time the USGS did its survey. Regardless, the
11 Quadrangle indicates the lands abutted a waterway; the Quadrangle does not show man-made
12 canals or ditches.

13 Given that Duck Slough existed and contained water up to the date of the 1911 Agreement
14 (which benefitted the Pak property), that 1911 Agreement preserved the ability to deliver water to
15 the Pak property, thus indicating the intent to preserve a riparian water right, just as was found in
16 the Term 91 case (WR2004-0004).

17 The Mussi property (as did the Pak property) had its current diversion point (WRV system)
18 installed as of approximately 1925. This is evidenced by the agreement presented with the
19 testimony of Michael Robinson (Mussi Exhibit 5, 5A). However, Mr. Robinson also testified to
20 other important facts. Mr. Robinson’s family has owned the parcel neighboring the Mussi property
21 since 1891, it having been purchased by his grand father at the same time Mussi predecessor in
22 interest originally purchased the Mussi parcel (Mussi Exhibit 5). Mr. Robinson stated that
23 although the 1925 agreement describes the installation of a new pump and ditch, he understood
24 that there had been a previous diversion and ditch canal serving the properties prior to 1925. He
25 also stated that the parcels had received water from the Woods Irrigation Company, the parcels
26 being at the extreme end of the WIC system. Because it was at the end of that system, delivery of
27 water was unreliable in the sense that they were regularly flooded. As a consequence, they and
28 their neighbor Alice Woods (successor in interest to E.W.S. Woods) decided to install and operate

1 their own diversion rather than rely on WIC. Thus, the testimony is that the Mussi property
2 received water, or had the ability to receive water without interruption up through the installation
3 of the present system. This indicates the intent to preserve the riparian right.

4 Other data indicated the continued ability to receive water after the date of the 1913
5 Quadrangle map. Mr. Neudeck testified as to a 1941 court case between Robinson (and Mussi's
6 predecessor in interest) and their neighbor to the west. In that case, the court noted that in an effort
7 to mitigate seepage onto the neighbor's lands, Mussi et. al. had filled in a slough in 1928 they had
8 kept full "of water." (Mussi Exhibit 4B, page 8.) This confirms that at least some portions of
9 Duck Slough remained and had water well into the 1920's. Mr. Neudeck explained how the text of
10 the case had apparently misstated the location of the slough, putting it on the east side instead of
11 the west side of the Mussi property. Of course, filling in a slough on the eastside of the property
12 would not address seepage to the neighbor on the west.

13 In addition, Mr. Neudeck testified to other maps which indicated either the existence of old
14 sloughs, or of canals where those old sloughs previously existed; all of which indicated that water
15 was always available to the Mussi property (See Mussi Exhibit 3R, 3S, 3T and 3U) through 1941
16 and 1976. [The SWRCB is also directed to the direct and rebuttal testimony of Dante Nomellini
17 which provides a complete description of the known conditions in the area (RT Vol. II, pages 321
18 et. seq.; Vol. IV, pages 726, et. seq) Of special note is his identification of a number of old (still
19 existing) flood gates immediately downstream of the current WRV diversion. These old flood
20 gates likely were used to supply both the Mussi and the Pak property before the year 1900 (RT Vol.
21 IV, pages 740-745).

22 Mr. Wee's view of Duck Slough and reclamation practices was substantially different and
23 bears examination. Mr. Wee informs us that Duck Slough came off Burns Cut-off, in a
24 southwesterly direction, then turned southeasterly, branching into three distinct channels. In
25 support of this assertion, Mr. Wee provides three maps dated 1850, 1869, and 1872. (MSS- R-
26 Wee, Exhibits 17A - 19B.) As we can see from an examination of those maps, they indicate that
27 the three sub-channels off Duck Slough travel into and through the eastern half of the WIC service
28 area on Middle Roberts Island. Hence any lands abutting these channels would have riparian rights

1 at least as of the time of these maps. As we can see, the subchannels as represented on the 1850
2 map extend all the way (south) about 2/3's of the way to the WIC main diversion point, thus going
3 into a good portion of the WIC service area..

4 Mr. Wee also confirms that as of at least 1876, two flood gates were installed at the mouth
5 of Duck Slough to regulate drainage (MSS- R-Wee, page 13, Exhibit 36). He concludes these
6 constituted a severance of any rights on Duck Slough. On cross-examination, the PT witness
7 admitted that a channel that naturally fills with water would confer riparian rights on the lands
8 abutting it. (WIC RT Vol I. pages 42-46). He also acknowledged that Delta sloughs do naturally
9 fill with water and thus even if not connected to a main channel could confer a riparian right. (RT
10 Vol I, pages 42-50). Mr. Wee believes there was little irrigation on most of the lands until well
11 into the 20th Century and thus the landowners allowed rising ground water to provide irrigation.
12 This would necessitate the continuous drainage of the lands, which means the old sloughs would
13 be constantly filling as they drained the lands, the water exiting through the flood gates. Not only
14 would this apply to the sub-channels of Duck Slough Mr. Wee identified, but it would also apply to
15 the main portion of Duck Slough extending to the Mussi/Pak properties. This means that those
16 properties abutted a channel which constantly filled with water that moved "downstream" to Burns
17 Cut-off. The flood gates Mr. Wee identifies could not have constituted a severance of riparian
18 rights as they were merely used as means of regulating what was natural flow (tide) back into the
19 channel; riparian lands by definition. Since Mr. Wee believes the flood gates were only used for
20 drainage, he is therefore acquiescing to the fact the properties were riparian. [ADD NEUDECK]

21 Under Mr. Nomellini's testimony, the Duck Slough flood gates were likely also operated to
22 deliver water by trapping high tides. Under that scenario, the landowners were maintaining the
23 ability to deliver water to their property, thus indicating the intent to preserve the riparian right.
24 The flood gates could not have constituted a severance of riparian rights if they were being used to
25 both deliver water to and away from the properties.

26 There was quite some testimony and cross-examination regarding the ability to tidally
27 pump water from either the Middle River end or the Burns Cut-off end of Duck Slough. The only
28 confusion was the MSS parties attempt to cloud the issue. Both Mr. Nomellini and Mr. Neudeck

1 testified that due to the very slight slope of the lands in question, it would be possible to tidally
2 pump water to the properties from either direction (RT Vol. II, pages 408-411). Recall that Mr.
3 Moore and Mr. Lajoie also indicated that water could and did enter both ends of Duck Slough. In
4 fact, Duck Slough was created by the Middle River flow, so of course water could be supplied to
5 the channel from this direction.

6 Under either scenario (Wee's or Nomellini's) these channels remained connected to a main
7 channel, natural tide water could flow in, and/or natural water in the channels could flow out, and
8 thus there was no severance of any abutting lands connection to a water supply.⁶

9 Duck Slough's connection to Middle River was leveed off and its own flood gate likely
10 installed, as represented by Mr. Nomellini (RT. Vol. II, pages 336-337). In the Woods hearing,
11 Mr. Wee referenced a source which identified the remaining "open" sloughs on Middle River as of
12 1875 (MSS-R-Wee, page 9, Exhibit 21), which suggests that other sloughs were dammed, and
13 installed with flood gates. It is important to recall that the Mussi parcel was originally purchased
14 and severed from a much larger parcel back in 1891. At that time, the area was still being
15 reclaimed and drained; there were few if any roads. The purchaser's (Vasquez) only real and
16 reliable method of accessing his property was via boat, which would require a waterway bordering
17 the property. If that waterway was leveed off, a flood gage would maintain the ability to irrigate
18 the lands. Which is more likely; purchasing land that was accessible and could be irrigated, or
19 purchasing land one could not get to and could not irrigate? Further, Mr. Wee presented us with a
20 another quote that indicated that lands on Roberts Island were being irrigated via siphons when
21 flood gates were not yet installed (WIC hearing, MSS-R-14 Exhibit 5). Under any scenario, the
22 owner maintained the ability to deliver water to his lands.

23 Some of Mr. Wee's information is very helpful in learning the history of Middle Roberts
24 Island. However, at every turn, Mr. Wee uses his initial conclusion (that Duck Slough can't exist
25 for purposes of determining the riparian status of lands) to rationalize contrary evidence out of
26 existence. Mr. Wee's data suggests/covers some things, but is silent as to much of the relevant

27
28 ⁶ The law does not limit riparian rights to a natural channel *Chowchilla Farms v. Martin*
(1933) 219 Cal.1, 18-26.

1 issues herein. He provides us with information of levee work, reclamation and early surveys.
2 None of his information addresses the issues of whether the subject parcels abutted Duck Slough or
3 other channels, whether landowners maintained the ability to get water to their lands, whether
4 natural features were converted/improved over time to drain and irrigate the lands or whether
5 landowners simply purchased lands, owned them for scores of years, minimized the uses thereof
6 until finally deciding to figure out somehow to irrigate them. The Mussi/Pak evidence does go
7 directly to these issues and provides a complete and sensible history of the parcels; which history
8 includes the continuous and uninterrupted ability to deliver water for agricultural purposes. As
9 stated by Mr. Mussi and Mr. Prichard, we know these lands were being farmed and what was being
10 grown. This information necessarily leads us to conclude they were applying water to irrigate the
11 lands as of 1914 (RT Vol. IV, pages 805 et seq.; Mussi Exhibit 5 and 8). No reasonable person
12 could conclude this irrigation practice was somehow shortlived, unique or sporadic.

13 The Mussi/Pak evidence fits perfectly with all the other evidence (even the MSS parties')
14 and requires no decision about what is to be believed and what is not. As related above, the
15 common practice of the era was to dam off old sloughs while installing sluice or flood gates for
16 both drainage and irrigation purposes. (Mussi Exhibit 9, RT Vol. II, pages 328-332) Hence, a
17 Duck Slough was not severed and isolated from the main channel of Burns Cut-off or Middle
18 River, it remained connected until farming practices resulted in a newer or more efficient method
19 of delivering water. No one would dispose of a method of getting water to their agricultural land
20 before securing an alternate method/source. Building a levee along an old slough did not result in
21 there being no more slough, it resulted in a deepened channel (Mussi Exhibit 3, pages 3-4, and 8-
22 9). Even one portion of a slough may not have been referenced by one source, that does not mean
23 its reference in another is incorrect.

24 Thus the Pak property was riparian to Duck Slough up until it became subject to the 1911
25 agreement, and therefore preserved its riparian water rights. The Mussi property was riparian to
26 Duck Slough up through at least 1911, and was thereafter being served water by other means until
27 the current system was installed, thus preserving its riparian water rights.

28

1 To show how interior sloughs maintained connections to the main channels, WIC presented
2 Mr. Blake (see WIC-6; especially RT Vol. III page 824 et seq.) who reviewed the transfers of land
3 by which the Woods Bros. purchased the properties which eventually became the WIC service
4 area. He then matched each transfer to a waterway showing how all the lands maintained a
5 connection, allowing us to conclude a riparian right existed on each parcel. His testimony is WIC
6 Exhibit 6, as corrected/amended during his direct examination (RT Vol. III pages 744 et seq.). As
7 can be seen through WIC-6H-1, there were 11 relevant transactions whereby the Woods Bros.
8 acquired these lands. (See also MSS R-14 WIC Exhibit 7A.) These transactions were all dated
9 between 1889 and 1892, but were recorded on only six different dates (MSS R-14 WIC Exhibit
10 7A). It appears these purchases were part of an overall (and not simply coincidental) deal. Mr.
11 Blake identifies how each parcel of land maintained a connection to some waterway, until and
12 when purchased by the Woods. Thereafter, the points of diversion, or the location of where a
13 riparian right would attach sometimes changes. MSS parties attempted to suggest such changing a
14 riparian right from on body of water to another is not allowed. They are incorrect as provided
15 above.

16 The evidence thus shows that all of the lands within owned by the E.W.S. Woods and
17 Wilhoit and Douglass (the heirs of J.N. Woods) abutted a waterway or ways at the time it was
18 purchased by the Woods Bros., that once purchased its actual source of water for irrigation
19 purposes may have changed from one channel to another, and that all these lands were served by
20 the WIC diversion/irrigation system as of the date of the 1911 agreements.

21 **C. A Riparian Landowner May Change His Point Of Diversion From A Slough To An**
22 **Interconnected River, And Vice Versa.**

23 It is well accepted that an individual exercising a water right may change his point of
24 diversion to any point along a watercourse, so long as this change in the point of diversion does not
25 cause injury to the rights of other water users (*Kidd v. Laird* (1860) 15 Cal. 161, 179, 181).

26 Sloughs that are interconnected with a watercourse, such as a river, and that are supplied
27 with water from the watercourse, are considered part of that watercourse and lands contiguous to
28 the slough have riparian rights in the waters of both the slough and the river to which the slough is

1 connected during such times as the water of the river is present in the slough (*Turner v. The James*
2 *Canal Company et al.* (1909) 155 Cal. 82, 82; see also *Miller & Lux v. Enterprise Canal & Land*
3 *Co.* (1915) 169 Cal. 415, 420-421; Hutchins, *The California Law of Water Rights* (1956) p.
4 217-218).

5 Therefore, a landowner whose land is riparian to a slough may lawfully divert water from
6 the main body of a river that is interconnected with, and supplies water to that slough, so long as
7 water from the river would be naturally present in that slough. Likewise, a landowner whose land
8 is riparian to a river may change his point of diversion to a point on an interconnected slough, so
9 long as he causes no injury to others diverting from the slough.

10 The Delta is an estuarine, not tributary watershed. Tributary watersheds have definite
11 directional flow, and can have rivers and tributaries that may seasonally, or in periods of drought,
12 have diminished flow or completely run dry. Changing a point of diversion from one tributary,
13 branch, or stream of a tributary watershed to a separate tributary, branch, or stream is generally
14 impermissible under California case law, because to do so would constitute a change in the actual
15 source of water diverted.

16 By contrast, the Delta's system of rivers, channels, and sloughs are all interconnected, and
17 the tidal pressure from the ocean keeps the various inter-delta rivers, channels, and sloughs full of
18 water, the level of which is more or less influenced solely by the high and low tides. As a result the
19 Delta is more like a lake or common "pool" as opposed to a network of separate bodies of water.⁷

20 Therefore, Delta landowners whose lands may have been riparian to a particular river or
21 slough at the time of the issuance of a patent for Swamp and Overflowed Land were entitled to use
22 the water of any interconnected Delta channel, slough, or river, and could lawfully change their
23

24
25 ⁷ At one point in these proceedings, SWRCB staff asked a question regarding the
26 availability of water in the Southern Delta. Although not relevant to this proceeding, the issue of
27 availability is moot with regard to channels within the tidal zone; they always have water. Though
28 quality may vary, such changes in quality have no effect on whether a riparian right exists. Even if
availability were an issue, it would be nearly impossible to determine the amount of flow in the
channels from any particular source at any particular time as the Delta is a large pool of waters
which entered this "reservoirs" over time.

1 point of diversion to any of the above without losing their riparian status and without having
2 changed the source of water diverted under the changed point of diversion.

3 In this case, the Mussi and Pak properties were originally riparian to Duck Slough (and
4 the Delta pool in general) but later shifted the place where they diverted their water. Even under
5 the most stringent interpretation, the properties always received water from Middle River and/or
6 the San Joaquin River; the use of one having no effect on the other's supply.

7 **D. A Landowner May Possess, And Simultaneously Exercise Both Riparian And**
8 **Appropriative Rights On The Same Parcel Of Land.**

9 "It is established in California that a person may be possessed of rights as to the use of the
10 waters in a stream both because of the riparian character of the land owned by him and also as an
11 appropriator." (*Pleasant Valley Canal Co. v. Borrer* (1998) 61 Cal.App.4th 742, citing *Rindge v.*
12 *Crags Land Co.* (1922) 56 Cal. App. 247, 252).

13 "We know of no reason why a party may not acquire by appropriation a right to the use of
14 the water of a stream to which his lands are riparian." (*Porters Bar Dredging, Co. v. Beaudry*
15 (1911) 15 Cal. App. 751).

16 The State Board has also acknowledged that a riparian right and an appropriative right
17 could exist simultaneously for the benefit of a parcel of property (State Water Rights Board
18 Decision D 1282, p. 6, 10).

19 The establishment of an appropriative right on otherwise riparian land can occur either
20 prior to the issuance of a patent, or after the issuance of the patent and vesting of the riparian right
21 (*Rindge v. Crags Land Co.* (1922) 56 Cal. App. 247, 252; State Water Rights Board Decision D
22 1282).

23 In these proceedings, the MSS parties often tried to assert that there could be no such
24 overlap of water rights and that a party was obligated to separate and clarify the water rights being
25 used at any time. That is of course incorrect. It would only be a proceeding between competing
26 users that the use of any particular right would need to be determined as the source of a diversion.

27 **E. Certificates Of Purchase Cannot Be Relied Upon To Demonstrate Severance Of**
28 **Riparian Rights.**

1 The MSS parties through their witnesses Mr. Wee continually asserted that certificates of
2 purchases were relevant in determining riparian rights. As provided below, that is a gross
3 misstatement of the law.

4 Certificates of Purchase, alone, did not designate a legal parcel. California's statute
5 relating to the sale of public lands and the issuance of patents states quite clearly:

6 ". . .[p]atents may be issued to the original holder of the certificate of purchase,
7 or his legal representatives, heirs, or assigns, as the case may be, and *such*
8 *patent may be for any amount of land* the party applying may be the owner of,
9 *whether it be for a greater, or less, amount than the original certificate of*
10 *purchase calls for.*" (Emphasis added). (Cal Stats. of 1861, Ch 251, Section 1
11 (Approved April 29, 1861)).

12 Riparian rights do not attach to property, nor vest in a landowner, until the land at issue
13 passes into private ownership through issuance of a patent from the State or Federal government,
14 and any diversion of water occurring on public land prior to issuance of a patent was appropriative
15 in nature, regardless of whether the land abutted a watercourse: "As to land held by the
16 government, it is not considered that a riparian right has attached until that land has been
17 transmitted to private ownership. . ." (*Rindge v. Crags Land Company* (1922) 56 Cal. App. 247,
18 252).

19 During possession of the land, but before the claimant obtained fee title by means of a
20 patent, claimant could, of course, divert water for domestic, agricultural or other purposes. Under
21 California case law, this diversion constituted an *appropriative right*, not a riparian right (*Pleasant*
22 *Valley Canal Co. v. Borrer* (1998) 61 Cal. App. 4th 742, 774; *Rindge v. Crags Land Co.* (1922) 56
23 Cal. App. 247, 252).

24 The only relevance certificates of purchase have with respect to riparian rights is in
25 determining the date of a riparian claimant's lawful entry and possession of land for the purposes of
26 establishing its priority, or lack thereof, over a competing appropriative right.

27 In *Lux v. Haggin* (1886) 69 Cal. 255, 430), the court stated that the Certificates of
28 Purchase should have been deemed admissible in a "limited sense" as evidence to show when
equitable title to public land was obtained, and that should a patent have been issued for those
Certificates of Purchase, the patent would operate by *relation back* to the date of those Certificates

1 of Purchase for the purpose of proving a date of lawful entry and possession of the land (*Lux v.*
2 *Haggin.*) Establishing the date of priority relative to riparian and appropriative rights was necessary
3 due to the fact that prior appropriative rights were acknowledged and protected under an Act of
4 Congress approved July 26, 1866 (*39 Cong. Ch. 263, July 26, 1866, 14 Stat. 253, §9*) and
5 landowners obtaining title to land by issuance of a patent would obtain a riparian right *subject* to
6 any pre-existing appropriative rights.

7 **F. Contrary To The MSS Parties' Assertions, The Deeds In The Chain Of Title Show**
8 **That The Mussi/Pak Properties Both Abutted Duck Slough.**

9 The MSS parties next tried to assert that even if Duck Slough ran between the Mussi and
10 Pak properties, it did not abut the Pak property, and thus the Pak property could not be riparian to
11 it. Their arguments were put forth by Mr. Wee after having examined some of the relevant deeds.
12 However, Mussi/Pak showed that Mr. Wee was incorrect again. Mr. Landon Blake, a certified
13 surveyor was called as a witness.

14 Mr. Blake testified at length regarding the various calls in the relevant deeds and how
15 they had changed over time. His testimony is too precise to adequately summarize, so the SWRCB
16 is encourage to read his testimony contained in RT vol IV, pages 785 et. seq. Basically, Mr. Blake
17 explained how surveyors handle property descriptions along sinuous lines such as levees and
18 waterways (RT vol IV, page 792 et. seq.), especially here in the Delta. He provided examples of
19 the guidelines for such descriptions, and gave examples of how other surveys in the area handled
20 these things (RT vol IV, pages 798 et. seq.). Mr. Blake traced the relevant deeds and calls,
21 describing what was included in the deeds on one side of Duck Slough/high Ridge Levee and on
22 the other. Importantly, he noted that an interpretation other than the one he gave would result in a
23 gap of land not owned by any party (RT vol IV, page 797). That is to say, when the common
24 landowner (Fisher; see Mussi Exhibit 3, pak Exhibit 3) transferred Middle Roberts lands to one
25 party and Lower Roberts lands to another, he certainly did not mean to leave a narrow strip
26 between the two; he transferred all of his property. In fact, Mr. Blake noted that any change in the
27 call in a subsequent deed cannot result in a change in the area of land covered, meaning that the
28 different calls cannot decrease the size of the parcel or separate it from the slough if earlier deeds

1 confirmed the land abutted the slough (RT vol IV, pages 801-802). Mr. Blake also noted that the
2 calls in one of the deeds confirms the existence of Duck Slough (RT vol IV, pages 796-797).

3 Pursuant to Mr. Blake's expert analysis he concluded that both the Mussi and the Pak
4 property abutted Duck Slough under the various deeds that transferred those and the larger parcels
5 in which they were previously contained (RT vol IV, pages 802-803). The MSS parties witness
6 has no real training in such surveying or deed interpretation, and thus his contrary conclusions
7 should be discounted. Again, under the MSS parties' deed interpretation, a gap of land resulted
8 from the early transfer. It is unreasonable to make a conclusion like that.

9 **V. MUSSI/PAK PROVIDED SUFFICIENT EVIDENCE**
10 **TO SUPPORT PRE-1914 RIGHTS.**

11 MSS parties assert that old sloughs which would have conferred riparian water rights
12 were filled in, did not exist, and were not used. They assert that people bought land on reclaimed
13 (or to-be-reclaimed) islands with no means of irrigating such lands; that they drained the swamp
14 and overflowed lands leaving themselves no method of irrigation except rainfall, that they dammed
15 off sloughs and did not use the twice daily tidal action to provide irrigation water. In sum, MSS
16 parties theories are that the Delta developed in a manner contrary to common sense and normal
17 agricultural practices.

18 However, Mussi/Pak provided evidence of a prima facie showing of a pre-1914 water
19 right. Relevant to that evidence is the law guiding pre-1914 rights, how they are created and
20 interpreted.

21 **A. Proof Of A Pre-1914 Right Requires Only That Water Be Put To Use, And Such**
22 **Right Can Develop Over Time.**

23 **1. Elements Necessary To Establish A Pre-1914 Water Right**

24 Appropriate rights prior to the 1914 enactment of the Water Commission Act are
25 commonly referred to as "pre-1914 rights." *People v. Murison* (2002) 101 Cal.App.4th 349, 359,
26 f.n. 6. Such pre-1914 rights were available by simply diverting water and putting it to a beneficial
27 use (Id at page 361). With regard to the quantity of water secured by a pre-1914 water right holder,

28 "An appropriator, as against subsequent appropriators, is entitled to the
continued flow to the head of his ditch of the amount of water that he, in the

1 past, whenever that quantity was present, has diverted for beneficial purposes,
2 plus a reasonable conveyance lost, subject to a limitation that the amount be not
3 more than is reasonably necessary, under reasonable methods of diversion, to
4 supply the area of land theretofore served by his ditch.” *Tulare Irrigation*
5 *District v. Lindsay-Strathmore Irrigation District* (1935) 3 Cal.2d 489, 546-
6 547.

7 It is further understood that the maximum quantity of water secured by an appropriative
8 right is measured by the maximum amount of water devoted to a beneficial use at some time within
9 the period by which a right would otherwise be barred for non-use. *Erickson v. Queen Valley*
10 *Ranch* (1971) 22 Cal.App.3rd 578, 584.

11 Prior to 1914, an appropriate right for the diversion and use of water could be obtained
12 two ways. First, one could acquire a non-statutory (common law) appropriative right by simply
13 diverting water and putting it to beneficial use. *Haight v. Costanich* (1920) 194 P.26, 184 Cal.426.
14 Second, after 1872, a statutory appropriative right could be acquired by complying with Civil Code
15 Section 1410 et seq. (*Id.*) Under the Civil Code, a person wishing to appropriate water was
16 required to post a written notice at the point of intended diversion and record a copy of the notice
17 with the county recorder’s office which stated the following: The amount of water appropriated,
18 the purchase for which the appropriated water would be used, the place of use, and the means by
19 which the water could be diverted (Cal. Civil Code Sections 1410 through 1422, now partially
20 repealed and partially reenacted in the Water Code; *Wells A. Hutchins, the California Law of Water*
21 *Rights* (1956) at 89).

22 Generally, the measure of an appropriative right is the amount of water that is put to
23 reasonable beneficial use, plus an allowance for reasonable conveyance lost. *Felsemthal v.*
24 *Warring* (1919) 40 Cal.App.119, 133.

25 **B. Once A Prima Facie Case For A Pre-1914 Right Is Shown, The Burden Shifts To**
26 **Other Parties Alleging Loss Or Abandonment.**

27 In establishing the nature and extent of a pre-1914 right, the board must apply the
28 “preponderance of the evidence” standard. This standard requires a showing that respondent’s
version of the facts is “more likely than not” or, stated another way, “that the existence of a

1 particular fact is more probable than its non-existence.” *Beck Development Company, Inc. v.*
2 *Southern Pacific Transportation Company* (1996) 44 Cal.App.4th 1160-1205.

3 Once the claimant of a pre-1914 water right puts on prima facie evidence of the existence
4 of a pre-1914 right, the burden shifts to the petitioner, or Board (or MSS parties) in this case, to
5 show that the pre-1914 right was lost or abandoned. (See e.g., *Lema v. Ferrari* (1938) 27 Cal.
6 App.2d 65, 72-73; *Erickson v. Queen Valley Ranch Company* (1971) 22 Cal.App.3d 578, 582.)

7 **C. SWRCB Requires Evidence Of A Pre-1914 Water Right Be Interpreted In The**
8 **Light Most Favorable To Mussi/Pak.**

9 Mussi/Pak is faced with the task of presenting evidence to substantiate a pre-1914 water
10 right which was perfected nearly 100 years ago. The Board has previously and properly recognized
11 the difficulty associated with locating and presenting such evidence and has determined that
12 *evidence introduced in support of a pre-1914 water right must be considered in the light most*
13 *favorable to the claimant.* Specifically, in Order No. WR95-10 California-American Water
14 Company, (“Cal-Am”), the Board provided as follows:

15 “For purposes of this order in evaluating Cal-Am’s claims, the evidence in the
16 hearing record is considered in the light most favorable to Cal-Am due to the
17 difficulty, at this date, of obtaining evidence that specific pre-1914
18 appropriative claims of right were actually perfected and have been preserved
19 by continuous use.” Order No. WR95-10, page 17.

20 An additional 15 years have passed since the Cal-Am Order making Muss/Pak’s
21 challenge in locating and producing evidence to substantiate its pre-1914 Water Right that much
22 more difficult. The evidence addressed in the Mussi/Pak matter must be viewed in the light most
23 favorable to Mussi/Pak.

24 **D. The Doctrine of Progressive Use And Development Allows WIC’s Pre-1914 Water**
25 **Right To Increase Over Time.**

26 The quantity of water to which an appropriator is entitled is not necessarily limited to the
27 amount actually used at the time of the original diversion. Under the doctrine of progressive use
28 and development, pre-1914 appropriations may be enlarged beyond the original appropriation
(*Haight* at 194; *Hutchins* at 118). Under the progressive use and development doctrine, the
quantity of water to which an appropriator is entitled is a fact specific inquiry. According to the

1 ruling in *Haight*, the right to take an additional amount of water reasonably necessary to meet
2 increasing needs is not unrestricted. The additional water or use must have been within the scope
3 of the original intent, and additional water must be taken and put to a beneficial use in keeping
4 with the original intent, and within a reasonable time by the use of reasonable diligence. *Haight* at
5 page 194. As such, the progressive use and development doctrine allows an appropriator to
6 increase the amount of water diverted under pre-1914 right, provided: a) the increased diversion is
7 in accordance with a plan of development; and b) the plan is carried out within a reasonable time
8 by the use of reasonable diligence. See Cal-Am at page 15, *Senior v. Anderson* (1896) 115
9 Cal.496, 503-504; 47 P.454; *Trimble v. Heller* (1913) 23 Cal.App.436, 443-444, 138 P.376; see
10 Cal-Am at page 16.

11 The evidence (as set forth below) clearly shows that WIC and its predecessors diverted
12 and put water to use, thus establishing a pre-1914 water right.

13 **E. Mussi/Pak Presented Substantial Evidence That Water Was Put To Use Prior To**
14 **1914 Thus Establishing a Pre-1914 Water Right.**

15 Initially, it must be noted that providing evidence of actual diversions from 96 years ago
16 would likely be a daunting task for any water users. It would be the rare case indeed where actual
17 measurements from 100 years ago exist which recorded the rate or amount of flow under a
18 diversion. The SWRCB has already addressed this time sensitive issue, most recently in the Cal
19 Am order as referenced above. Because of the Cal Am case, the Mussi/Pak evidence must be
20 viewed in a light most favorable to WIC.

21 In the Cal AM order the SWRCB relied on three pieces of information to find a pre-1914
22 water right: a petition of the Monterey County Water Works (“MCWW”) for an increase of its
23 water rates filed before the California Railroad Commission; the MCWW’s brief dated June 29,
24 1914 supporting its position for increased water rates (Page 6 of that brief discussed various
25 estimates of water use and presented a likely total); and a January 27, 1915 Engineer’s Report to
26 the MCWW about the impact of the Railroad Commission’s decision regarding MCWW’s petition
27 for a rate increase. Table 1A of that exhibit presented the MCWW’s annual use of water in 1913-
28 1914 as 43,444,600 cubic feet (997 afa). (Cal Am WR 95-10 at pages 21, 22)

1 With this limited amount of evidence supporting the Cal Am right, we now examine what
2 evidence exists for the Mussi/Pak pre-1914 water right.

3 The initial evidence for a pre-1914 right for Mussi and Pak is set forth in the testimony of
4 Terry Prichard. Mr. Prichard presented a map (Mussi R-5) which was a combination of a soils
5 map, a Google Earth map, and a 1914 map of Roberts Island (*Gateway Map* of San Joaquin
6 County). The 1914 map indicated what crops were being grown, especially alfalfa and beans. This
7 may confirm those crops on the Mussi and Pak parcels. Mr Prichard testified that once the lands
8 were drained, the soils required that irrigation water be applied to support the crops grown. He
9 concluded that not irrigating was not an option given these conditions (RT vol IV, pages 805-807).

10 Additionally, Mr. Neudeck confirmed this same irrigation need, especially with regard to
11 a multi-year crop like alfalfa which needs water in the summer months (RT Vol.III, page 628).
12 Further, Mr. Mussi also made this same point about the knowing what crops were being grown in
13 1914 tells us that irrigation must have been occurring. All this adds up the fact that the only
14 evidence presented indicates that as of 1914, water was being applied to the Mussi and Pak
15 properties, in amounts to support alfalfa and bean crops.

16 The evidence provided by Mr Michael Robinson (Mussi Exhibit 5, RT Vol. pages 481-
17 484) confirms that there was no gap in water delivery to these properties subsequent to 1914 and up
18 until the time the current system of diversion was installed in 1925. The only conclusion therefore
19 is that Mussi and Pak began irrigating their properties before the 1914 date which constitutes a pre-
20 1914 water right.

21 In support of this, the SWRCB is also referred to the numerous other references and
22 documents provided by Mr. Nomellini both in his direct and in his rebuttal testimony which
23 indicate that water was always available to the properties (see Mussi Exhibit 9; RT Vol. IV, pages
24 726 et. seq). Mr.. Nomellini explained how after draining the lands for reclamation, the farmers
25 then operated the slurry or flood gates to deliver water for irrigation (WIC Exhibit 8, pages 3-7).
26 There was no contrary evidence to Mr. Nomellini's, Mr. Robinson's, Mr. Mussi's or Mr.
27 Prichard's testimony. In addition, Mr. Lajoie and Mr, Moore's testimony connected old sloughs
28

1 to later existing irrigation and drainage canals (Mussi Exhibits 1 and 2), and Mr. Neudeck who
2 showed how various sources of water were available to these lands (Mussi Exhibit 3, pages 6-7).

3 Taken together, the above information, when viewed in a light most favorable to the
4 parties, leads to the conclusion that a pre-1914 right exists for both Mussi and Pak.

5 MSS parties only real argument here is to suggest that some of the land was too high in
6 elevation (in relation to the River) and thus was not irrigated via a gravity flow system. As
7 previously set forth above, the lands are slightly above and mostly below sea level meaning that
8 water could flow onto them via gravity; also indicating that water was easily available.

9 Using the SWRCB staff general rule of 1 cfs per 100 acres, the amount of the pre-1914
10 rights for Mussi and Pak would be approximately .7 cfs and .4 cfs respectively.

11 **F. MSS' Argument That The Case Of Woods Irrigation Company v. The Department**
12 **of Employment Estopps WIC From Claiming Its Own Water Rights Is Legally And**
13 **Factually Incorrect.**

14 Since the evidence indicates that both (or either) the Mussi and Pak properties may have
15 received water from WIC, we are including the following sections to address an MSS parties'
16 argument that WIC has no water rights to deliver. These arguments and law also address the
17 possible situation of WIC delivering its pre-1914 right water to the parties.

18 The MSS parties claim that a court case had determined WIC had no water rights. This
19 turns out to be a false assertion on their part. The MSS parties referenced the California Supreme
20 Court Case of *Woods Irrigation Company v. Department of Employment* (1958) 50 Cal.2d. 174 ,
21 and provide a portion of the Reporter's Transcript from the Appellate Court (MSS-5). Although
22 the Supreme Court's recitation of the facts mentions that WIC has no water rights of its own, that
23 fact was not at issue in the case. MSS parties try to argue that this case bars WIC from asserting its
24 pre-1914 water right. That argument falls apart on review.

25 **1. WIC's Pre-1914 Rights are not Precluded by Collateral Estoppel Because**
26 **the Required Elements for Collateral Estoppel are not Present.**

27 The elements required to apply the doctrine of collateral estoppel/issue preclusion are
28 well settled. As set forth in the California supreme court in *Lucido v. Superior Court* (1990) 51
Cal.3d 335, and its progeny, the doctrine applies only if several threshold requirements are

1 fulfilled. First, the issue sought to be precluded from re-litigation must be *identical* to that decided
2 in the former proceeding. Second, this issue *must have been actually litigated* in the former
3 proceeding. Third, the issue must have been *necessarily* decided in the former proceeding. Fourth,
4 the decision in the former proceeding must be final and on the merits. Finally, the party against
5 whom preclusion is sought must be the same as, or in privity with, the party to the former
6 proceeding. The party asserting collateral estoppel bears the burden of establishing these
7 requirements. *Id. at 341*. Even assuming all the threshold requirements are satisfied, the court
8 must look to the public policies underlying the doctrine before concluding that collateral estoppel
9 should be applied in a particular setting. *Id. at 342 - 343*.

10 The existence of water rights were not at issue and, therefore, were not litigated in *WIC*
11 *v. The Department of Employment* (1958) 50 Cal.2d 174. Rather, the issue before the court was
12 whether WIC's employees were agricultural laborers and, thus, whether WIC was exempt from
13 having to make unemployment insurance contributions on their behalf. The existence of WIC's
14 water rights or those of its shareholders, was not challenged or at risk. MSS incorrectly asserts
15 that, based on statements in the Reporter's Transcript on Appeal, WIC's attorney, Gilbert Jones,
16 stated that WID had no water rights. The actual testimony from The Reporter's Transcript On
17 Appeal (MSS-1E), page 140 lines 21-23 is:

18 Q: I see. And does it own any water rights?

19 A: No water rights whatever are transferred by the owners of this land to this company.

20 Hence, a review of the testimony relied upon by MSS parties reveals that WIC's attorney
21 at the time did not answer a question directly. Instead of answering whether water rights were held
22 or owned, Mr. Jones offered a non-responsive statement regarding the lack of any transfer of water
23 rights. As will be touched on below, a reading of the complete documents indicates that at this part
24 of the testimony, and at all other parts therein, the discussion and testimony pertained to riparian
25 water rights with no discussion or position given on any pre-1914 rights.

26 An actual determination of whether WIC held its own water rights, independent of its
27 shareholders, was not a part, nor was deciding it necessary for the court's ultimate determination
28 that WIC employees were exempt agricultural laborers. Consequently, the issues litigated in *WIC v.*

1 *Dept. of Employment* are very different than those at issue in the CDO proceeding. Based on the
2 obvious differences between the two cases, it is clear that the first three elements necessary to
3 support a finding of collateral estoppel/issue preclusion are not satisfied and that the doctrine does
4 not apply in this instance. The issue of WIC's water rights was not decided in the former
5 proceeding. And, it was not necessarily decided in the former proceeding. Furthermore the former
6 proceeding was not a water right adjudication nor was it a quiet title action. The *WIC v.*
7 *Department of Employment* proceeding clearly did not involve a legal action to determine any
8 water rights held by WIC.

9 In addition to failing to satisfy the first three elements of collateral estoppel/issue
10 preclusion, the issues in dispute in the WIC CDO proceedings are important from a statewide
11 public policy perspective. This is another factor preventing the SWRCB from determining that
12 WIC is estopped from asserting, and further establishing, its water rights in the CDO proceeding.

13 As referenced above, it is quite obvious that the testimony in the *WIC v. Dept. of*
14 *Employment* was focused on the fact that WIC was delivering the riparian right water of those
15 being served through common facilities. The fact that such delivery also establishes a pre-1914
16 right does not appear to have been at issue in the case.⁸

17 **2. WIC's Pre-1914 Water Right Cannot Be Barred By Res Judicata/Claim**
18 **Preclusion.**

19 Res judicata, or claim preclusion, prevents the re-litigation of a claim previously tried and
20 decided. *Mycogen Corp. v. Monsanto Co.* (2002) 28 Cal. 4th 888, 896-897. The claim in *WIC v.*
21 *Department of Employment* specifically addressed WIC's claim that its employees were
22 agricultural laborers thereby exempting WIC from having to make unemployment insurance
23 contributions on their behalf. Any discussion of WIC's water rights, or the status of same, was not
24 related to the claims at issue. Thus, the doctrine of res judicata is not applicable.

25 **3. WIC's Pre-1914 Water Right Cannot Be Barred By The Doctrine of**
26 **Judicial Estoppel.**

27
28

⁸ The ability to hold multiple water rights is addressed in Section IV G. 2 herein below.

1 Any contention that WIC is judicially estopped from asserting pre-1914 and riparian
2 water rights in the subject CDO proceedings is misplaced. In *WIC v. Department of Employment* ,
3 the issues before the court clearly did not pertain to WIC's water rights. The evidence in the matter
4 included superfluous, limited testimony related to water rights which was unclear and non-
5 responsive. Moreover, there is no indication whatsoever that even the limited and incomplete
6 discussion pertaining to water, involved or contemplated pre-1914 appropriate rights.

7 The doctrine of judicial estoppel seeks to preclude a party from gaining a litigation
8 advantage by espousing one position and then seeking a second advantage by taking an
9 incompatible position. *Jhaveri v. Teitelbaum*, (2009) 176 Cal. App.4th, 740. The dual purpose of
10 the doctrine are to maintain the integrity of the judicial system and protect parties from unfair
11 strategies of their opponents. *Id.* WIC's water rights were not at issue in *WIC v. Department of*
12 *Employment* , and pre-1914 rights were not discussed. WIC has gains no unfair advantage against
13 its opponents or unfairly surprises them in this matter by asserting its own pre-1914 rights and the
14 riparian rights of its member shareholders. WIC did not initiate this proceeding other than to
15 request a hearing to prevent the Draft CDO from being adopted without opposition. WIC's
16 opponents in this proceeding have always known WIC claims to have valid water rights both on its
17 own accord and through its member shareholders. WIC has been in existence diverting water onto
18 Roberts Island since at least 1911. MSS parties, and WIC's other opponents in this proceeding
19 cannot seriously claim they have been unfairly surprised or disadvantaged because WIC continues
20 to assert its right to legally divert water from the Delta. MSS parties' claim that the doctrine of
21 judicial estoppel applies in this context has no merit.

22 **4. Any Assertion That WIC Cannot Assert Its Pre-1914 Water Rights Before**
23 **The SWRCB Because The California Supreme Allegedly Has Exclusive**
24 **Jurisdiction Is Incorrect.**

25 MSS parties' position regarding alleged exclusive jurisdiction defies logic. MSS parties
26 asks the SWRCB to find that it has no jurisdiction to determine WIC's water rights yet MSS
27 parties took an opposite position in opposing a recent writ of prohibition filed by the Mussi et., al
28 petitioners challenging SWRCB's authority to conduct the subject CDO proceedings. Moreover,
MSS parties is asking the SWRCB to find that WIC is forever barred from defending or proving its

1 water rights because of a decision in an unemployment insurance case in which water rights were
2 not at issue. Clearly, MSS parties' assertions must be rejected.

3 **VI. MSS PARTIES WITNESS MR. WEE'S TESTIMONY IS**
4 **UNRELIABLE BASED ON THE PRESENTATION OF INACCURATE**
5 **INFORMATION AND A FAILURE TO EXPLAIN THE SAME.**

6 In support of their theories Intervenors present basically one "expert" witness who does
7 title work for water rights fights. This "expert" interpreted every bit of evidence to support his
8 theory of no Delta rights; the same expert whose report alleged a near complete lack of riparian
9 rights in the Delta based solely on a review of Assessor maps; the same expert who could not bring
10 himself to admit that an agreement to provide water was not intent of the landowner to preserve a
11 riparian right. As we shall see, this "expert" should not be given any credence given his
12 "mistaken" assertions on the record and his inability to explain such mistakes.

13 In the related hearing for Dunkel, Mr. Wee (Dunkel MSS 1) first claimed that a deed
14 dated December 28, 1909 resulted in a severance of the property at issue therein (Dunkel MSS
15 Exhibit 1H). However, even his own exhibit attached to his testimony wherein he made the claim
16 showed that the subject deed resulted in a parcel which abutted Middle River, and thus maintained
17 a riparian right (Dunkel MSS 1G). In the cross examination of the witness, he expressed his belief
18 that Certificates of Purchase ("CP's") could result in a severance of a riparian right. Mr. Wee's
19 belief is of course incorrect. A CP confers an ability to purchase property from the State, it is not a
20 transfer of ownership. Thus with no transfer, there can be no severance. In fact, a riparian water
21 right does not exist on property while the State owns it, but comes into existence after the State
22 transfers the property to a party. Hence, Mr. Wee's theory of CP's "severing" riparian rights is
23 both backwards and wrong.

1 When the Dunkel matter was re-opened pursuant to a motion by Dunkel.⁹ Mr. Wee
2 explained his incorrect conclusion about severance by alleging that a simple mapping error of CP's
3 which included and neighbored the Dunkel parcel was the reason for the incorrect conclusion. On
4 cross-examination and in fact under simple analysis his explanation does not hold up.

5 First, Mr. Wee did not ever allege that any original CP caused a severance of the Dunkel
6 property. Neither did he allege that the Patent, or any deed in the chain (before the 1909 deed)
7 caused a severance. The CP mapping error did not lead him to some deed which did cause a
8 severance; he mapped the correct deeds in the chain. Thus, an incorrect mapping of a CP did not
9 lead to a mistaken deed being examined.

10 Second, when determining whether a deed severs property from a connection to a
11 waterway, the mapping of the CP has no bearing on whether the deeded property abuts a waterway
12 or not. One does not "look back" in time to the CP to interpret a later deed unless one already
13 alleges the CP caused a severance; something Mr. Wee specifically did not do. In fact, if the CP
14 caused the severance, the later deed would be irrelevant.

15 Third, in this hearing, Mr. Wee asserted that a larger parcel (including Dunkel's)
16 remained riparian to Middle River as of 1911; testimony presented after the Dunkel hearing was
17 completed. Yet, Mr. Wee claimed he did not notice that his two testimonies were in conflict until
18 after he saw the Motion to Re-Open Dunkel. His statements simply cannot be believed; the
19 connections to waterways is central to both hearings and he must have known that when he
20 asserted the land was riparian it was contrary to his recent assertion it was not.

21 In this hearing, Mr. Wee presented MSS R-14 Exhibit 24 which included the quote "...
22 we stepped onboard the steamer Sea Clara Crow . . .and in a few hours were landed at Camp No. 2,
23 on Duck Slough near the center of the island. . . ." Mr. Wee summarized these words as the parties
24

25 ⁹ The Intervenor's either knew, or at least became aware that Mr. Wee (on their behalf)
26 submitted incorrect testimony when they reviewed his testimony and exhibits, or when they read
27 Dunkel's motion to re-open that hearing. However, neither counsel or Mr. Wee attempted to
28 correct the mistake (which went to the core issue before the SWRCB). Counsel for Intervenor's
were required under the Code of Ethics to correct the mistake as soon as they became aware of it.
Instead, Intervenor's attempted to prevail based upon evidence they knew was incorrect.

1 taking the steamer and “. . . disembarked at Burns Cut-Off near the mouth of Duck Slough. . . .”
2 Taking a steamer or a slough to the center of the island cannot be described as “near the mouth” of
3 the slough. This further exemplifies Mr. Wee’s tendency to misstate facts to support preconceived
4 conclusions.

5 Mr. Wee’s positions, statements and explanations defy logic and cannot be accepted as
6 true. If the error was simple one, Mr. Wee could have simply said he made a mistake and made a
7 statement which was not supported by his research. Instead, he developed a nonsensical
8 explanation about CP’s and mapping. The Board can make its own conclusions about why and
9 what, but it is clear that Mr. Wee’s testimony in these hearings must be considered suspect and
10 should not be given any weight given his failure to explain his submittal of incorrect information.

11 **VII. THE LANGUAGE IN THE RELEVANT DEEDS PRESERVED**
12 **A RIPARIAN RIGHT FOR MUSSI/PAK.**

13 The original deeds transferring the relevant lands subsequent to the Patent, were J.P
14 Whitney to M.C. Fisher, then M.C. Fisher to Stewart et .al. These deeds are found as Mussi and
15 Pak Exhibits 3C and 3D. Each of these contains a provision transferring “tenements,
16 hereditaments and appurtenances.” Though this should be sufficient for purposes of the
17 evaluation below, subsequent deeds in the chains also included this language.

18 **A. The Riparian Water Rights For The Mussi and Pak Lands Were Retained In The**
19 **Parcels That Were No Longer Contiguous To A Water Course Due To The**
20 **Language In The Deeds In All Alleged Severances.**

21 The 1907 case of *Anaheim v. Fuller* (1907) 150 Cal. 327 at page 331¹⁰ is cited for the
22 “well settlement rule that where the owner of a riparian tract conveys away a noncontiguous
23 portion of the tract by a deed that is silent as to riparian rights, the conveyed parcel is forever
24 deprived of its riparian status.” *Santa Margarita v. Vail* (1938) 11 Ca.2d 501, 538. “If the owner
25 of a tract abutting on a stream conveys to another a part of the land not contiguous to the stream, he
26 thereby cuts off the part so conveyed from all participation in the use of the stream and from
27 riparian rights therein, unless the conveyance declares the contrary.” “Land thus conveyed and

28 ¹⁰ It is important to note that later cases clarified that “intent” of the parties is controlling
and not just language in the deed.

1 severed from the stream can never regain the riparian right, although it may thereafter be
2 reconveyed to the person who owns the part abutting on the stream, so that the two tracts are again
3 held in one ownership.” *Anaheim v. Fuller* (1907) 150 Cal. 327, 331. WIC is not contending that
4 any riparian water rights are regained due to the later merger of the ownership of a prior severed
5 parcel with the Woods brothers. Rather, WIC is contending that the language in the deeds did in
6 fact retain the riparian water rights of those parcels that were separated from the watercourse.

7 **1. Hereditaments Language Within Deeds Conveyed Riparian Rights To**
8 **Parcels Separated From The Watercourse.**

9 A riparian water right is considered a hereditament. In 1886 the Supreme Court in *Lux v.*
10 *Haggin* repeatedly described the right of the riparian proprietor to the use of the water as an
11 “incorporeal hereditament appertaining to the land.” *Lux v. Haggin* (1886) 69 Cal. 255, 300, 391,
12 392, 430. It was quite clear at the time of *Lux v. Haggin* that a riparian water right was considered
13 a hereditament stating, “The supreme court of California has not been silent with respect to the
14 subject. ‘The right to running water is defined to be a corporeal right or hereditament, which
15 follows or is embraced by the ownership of the soil over which it naturally passes. *Sacket v.*
16 *Wheaton*, 17 Pick. 105; 1 Cruise, Dig. 39; Ang. 3.’ *Hill v. Newman*, 5 Cal. 445.” *Lux v. Haggin*
17 (1886) 69 Cal. 255, 392.

18 Again in 1890 riparian water rights were clearly described by the California Supreme
19 Court as a corporeal hereditament stating: “To the extent that it existed, it was an appurtenance to
20 the land, running with it as a corporeal hereditament. It was one which might be segregated by
21 grant or by condemnation, or extinguished by prescription, but could not be defeated by simple
22 appropriation.” *Alta Land & Water Co. v. Hancock* (1890) 85 Cal. 219, 223 Clearly it was a very
23 reasonable interpretation in 1890 that a reverence in a deed granting the “tenements, hereditaments
24 and appurtenances” granted to the conveyed land the riparian water rights in which the conveyed
25 land had previously enjoyed prior to the conveyance. At the time there was no law to the contrary,
26 and WIC contends that even today there is no law to the contrary.
27
28

1 Although severance of the riparian water right is alleged, it is quite clear from the face of
2 the deeds that each deed conveyed the existing riparian water rights to those parcels which were no
3 longer contiguous to a watercourse.

4 **2. Reference To Hereditaments Language In The 1972 Case *Murphy Slough* Is**
5 **Distinguishable.**

6 In 1972 the Fifth District Court of Appeal in *Murphy Slough Assn. v. Avila* (1972) 27
7 Cal.App.3d 649, held that a prior transfer of a 100 foot strip of land to a reclamation district along
8 a watercourse that allegedly severed the grantor's remaining land from the watercourse did not
9 extinguish the grantor's riparian water rights to the remaining land no longer contiguous to the
10 watercourse. First, the situation at issue is reversed from the examination of intent of the
11 conveyance in *Murphy Slough Assn.* In *Murphy Slough Assn.* the grantor retained the resulting
12 noncontiguous parcel and the Court evaluated whether the deed language of hereditaments granted
13 such grantor's riparian water rights to grantee. In this factual situation the presumption is that
14 riparian water rights pass by a grant of land to the grantee even though the instrument is silent
15 concerning the riparian right. *Murphy Slough Assn. v. Avila* (1972) 27 Cal.App.3d 649, 656. This
16 is not the presumption at issue in this hearing.

17 **3. Intent Of Parties Prevails, Derived From Extrinsic Evidence And the Deed**
18 **Itself.**

19 "We conclude that the overriding principle in determining the consequence of a conveyance
20 of land insofar as riparian rights are concerned is the intention of the parties to the conveyance."
21 *Murphy Slough Assn. v. Avila* (1972) 27 Cal.App.3d 649, 657. It is not necessary that the
22 conveyance specifically specify that riparian water rights are transferred; rather the intent of the
23 grantor is evaluated. "The extrinsic evidence and the deed itself establish status of riparian water
24 rights." *Murphy Slough Assn. v. Avila* (1972) 27 Cal.App.3d 649, 658 Use of water from the
25 watercourse, ditches serving the parcel or other conditions can indicate an intent to continue to
26 have the riparian right notwithstanding the lack of contiguity with the watercourse. *Hudson v.*
27 *Dailey* (1909) 156 Cal. 617, 624-625.

1 The *Murphy Slough* Court found that a riparian water right was retained in the
2 noncontiguous parcel by, in part, the actions of the parties after the alleged severance. The Court
3 concluded that the later deeds of the grantors conveyed 9 and 18 years after the alleged severance
4 indicated the parties belief that the early deed had retained the riparian rights of the noncontiguous
5 parcel. *Murphy Slough Assn. v. Avila* (1972) 27 Cal.App.3d 649, 657-658. In addition the Court
6 relied on the fact that “the evidence is uncontradicted that respondents have been taking water from
7 the Murphy Slough continuously for the past 30 years and appellant at no time has sought to
8 intervene to prevent such taking” to conclude that the intent of the parties was to retain the riparian
9 water right to the non contiguous parcel (*Murphy Slough Assn. v. Avila* (1972) 27 Cal.App.3d
10 649, 658

11 Similar conclusions can be made in the case before the State Water Board. The Mussi/Pak
12 property was reclaimed for purposes of cultivation. Great expense and effort was taken to reclaim
13 the land and put it to cultivation and the Woods brothers acquired the property on Roberts Island
14 for the purpose of farming. These facts together with the deed language conveying all
15 “hereditaments” which clearly include riparian water rights supports the conclusion that the intent
16 of the grantors was to convey the riparian water rights to the parcels which were allegedly no
17 longer contiguous to watercourses.

18 **B. Once Riparian Rights Have Been Retained To Lands Separated From The**
19 **Waterways The Riparian Rights Do Not Need To Be Mentioned Or Retained In**
20 **Future Deeds.**

21 Once riparian rights have been retained they remain and do not need to be mentioned or
22 retained in future deeds. Once preserved, the riparian rights of non-contiguous land remains
23 throughout the chain of title. *Rancho Santa Margarita v. Vail* (1938) 11 Cal 2d 501, 538; *Miller &*
24 *Lux v J. G. James Co.*, (1919) 179 Cal 689, 690-691; *Strong v Baldwin* (1908) 154 Cal 150, 156-
25 157. Once the riparian rights are preserved at the time the land is separated from the various
26 waterways, then that land forever retains riparian rights as it can never lose them through future
27 separations from waterways since there cannot be any future separations from waterways, the land
28 has already been separated from the waterways. “If the grant deed conveys the riparian rights to the
noncontiguous parcel, that parcel retains its riparian status.” (*Rancho Santa Margarita v. Vail*

1 (1938) 11 Cal.2d 501, 539.) Riparian right is a “vested right inherent in and a part of the land
2 [citations] and passes by a grant of land to the grantee even though the instrument is silent
3 concerning the riparian right [citations].” (*Murphy Slough Assn. v. Avila* (1972) 27 Cal.App.3d
4 649, 655-656.) Thus, once a riparian right is retained in a parcel separated from the watercourse,
5 the riparian right passes by grant of the land in future conveyances even though the future
6 conveyance is silent concerning the retained riparian right. Therefore it is not necessary for any
7 deeds subsequent to the conveyances retaining the riparian water rights in the noncontiguous
8 parcels to mention, retain or transfer such retained riparian water rights within Woods Irrigation
9 Company.

10 **C. The Amount Of Water In A Stream Has No Bearing On Determining If The Tract Is**
11 **Riparian.**

12 “The amount of water in the stream has no bearing whatever in determining whether a
13 particular tract is riparian.” *Rancho Santa Margarita v. Vail* (1938) 11 Cal. 2d 501, 534. “In
14 determining the riparian status of land the same rules of law apply regardless of the size of the
15 tract, the extent of the watershed or the amount of the run off.” The quantity of water available
16 does not impact the status of the land as riparian.

17 Thus the amount of water within Duck Slough has no bearing on whether the land along
18 Duck Slough is riparian or not. The mere location adjacent to the slough, which has some water, is
19 sufficient evidence to support a riparian water right.

20 **D. Partition Does Not Sever The Riparian Lands.**

21 “Upon the partition of riparian lands, the decree being silent as to the division of riparian
22 rights, each parcel retains its water right.” *Rancho Santa Margarita v. Vail* (1938) 11 Cal.2d 501,
23 540.

24 **VIII. ALL OF THE MUSSI AND PAK LANDS ARE RIPARIAN**
25 **TO THE DELTA POOL.**

26 The Delta Pool is like a lake. Even without river flow the lands within the tidal range are
27 riparian to the Delta Pool. It is common knowledge that the Delta Pool has an outlet at Carquinez
28 for the inflow from the multitude of tributaries flowing into and through the Delta. For most of the

1 time in most years there is river flow into and out of the Delta Pool. Even without river flow, the
2 tides move water into and out of the Delta Pool. On the ebb tides, water flows out of the Delta
3 Pool through Suisun Bay and the Carquinez Strait. On the flood tides, water from the ocean via
4 San Francisco Bay flows inland through Carquinez Strait. Absent export project operations, most
5 of the time there is a net outflow. The tidal cycle includes two ebb tides and two flood tides about
6 every 25 hours. Tidal effects extend inland to about West Sacramento on the Sacramento River
7 and to Vernalis on the San Joaquin River.

8 The law is crystal clear that riparian rights extend to lands contiguous to lakes and ponds
9 and similar waterbodies just as they do to lands contiguous to flowing rivers and streams.

10 "It is not essential to a watercourse that the banks shall be unchangeable, or
11 that there shall be everywhere a visible change in the angle of ascent, marking the
12 line between bed and banks. The law cannot fix the limits of variation in these and
13 other particulars. As was said, in effect, by Curtis, J. (*Howard v. Ingersoll*, 13 How.
14 428), the bed and banks or the channel is in all cases a natural object, to be sought
15 after, not merely by the application of any abstract rules, but, 'like other natural
16 objects, to be sought for and found by the distinctive appearances it presents.'
17 Whether, however, worn deep by the action of the water, or following a natural
18 depression without any marked erosion of soil or rock; whether distinguished by a
19 difference of vegetation or otherwise rendered perceptible,— a channel is necessary
20 to the constitution of a watercourse.

21 . . . We can conceive that along the course of a stream there may be shallow
22 places where the water spreads and where there is no distinct ravine or gully. Two
23 ascending surfaces may rise from the line of meeting very gradually for an indefinite
24 distance on each side. In such case, if water flowed periodically at the portion of
25 the depression, it flowed in a channel, notwithstanding the fact that, the water being
26 *withdrawn*, the 'distinctive appearances' that it had ever flowed there would soon
27 disappear." *Lux v. Haggin* (1886) 69 Cal. 255, 418 and 419.

28 The Delta Pool is wide where the tidal influence intersects the flow from the numerous
tributaries and generally narrows as flow moves west becoming a very distinct single channel at
Carquinez Strait.

Even without flow, the Delta Pool is a water body to which riparian rights attach. In the
case of *Turner v. James Canal Co.* (1909) 155 Cal. 82, the California Supreme Court addressed the
question of riparian rights to Fresno Slough during the very considerable period of each year when
there was no flow from the Kings River. At page 87, the Court states:

"The right of a riparian owner to the use of water bordering upon his land
does not, as plaintiffs contend, arise from the fact that the water is flowing, and that
any part thereof taken from the stream is immediately replaced by water from the

1 current above it. It comes from the situation of the land with respect to the water,
2 the opportunity afforded thereby to divert and use the water upon the land, the
3 natural advantages and benefits resulting from the relative positions, and the
4 presumption that the owner of the land acquired it with a view to the use and
5 enjoyment of those opportunities, advantages, and benefits. *Duckworth v.*
6 *Watsonville, etc., Co., 150 Cal. 526, 89 Pac. 338.* Out of regard to the equal rights
7 of others whose lands may abut upon the same water, the law has declared, as will
8 hereafter be more fully shown, that the use of the water for irrigation, so far as it
9 affects the right of others similarly situated, must be reasonable, and must be
10 confined to a reasonable share thereof; but, with this common limitation, the right to
11 use water upon adjoining land applies as well to the water of a lake, pond, slough,
12 or any natural body of water, by whatever name it may be called, as to a running
13 stream.”

8 At page 88, the Court concludes:

9 “As we have concluded that riparian rights do exist in a body of water not
10 flowing, it is unnecessary to discuss the question of the things essential to a water
11 course.”

11 **IX. DAMMING OF SLOUGHS AND OTHER WATERCOURSES**
12 **BY WAY OF CONSTRUCTION OF LEVEES WITH OR WITHOUT**
13 **FLOODGATES DOES NOT CHANGE THE CHARACTER OF THE**
14 **WATERCOURSE OR THE RIPARIAN STATUS**
15 **OF THE LANDS CONTIGUOUS THERETO.**

16 Just as the dams on the various rivers and streams throughout the State do not change the
17 riparian status of the lands along the rivers and streams, the construction of levees across the
18 hundreds of sloughs and other watercourses in the Delta does not change the character of the
19 watercourse or riparian status of lands along the watercourse. The availability of water in such a
20 watercourse may be altered, however, riparian rights are not lost by non-use and the existence of a
21 watercourse is not dependent on a continuous flow or even a constant supply of water.

22 In *Smith v. City of Los Angeles* (1944) 66 Cal.App.2d 562 the court at page 579 cites 25
23 California Jurisprudence, page 1038, section 38 for the statement of the law:

24 “ ‘A watercourse does not lose its character as such by reason of the fact that
25 it is improved by deepening or is artificially controlled, nor because it is used as a
26 conduit to carry other waters. Again, the character of a watercourse is not changed
27 by the fact that a pond is created by a dam. *Nor does a watercourse lose its*
28 *character as such because all the water has been diverted therefrom, no matter for*
how long a period, -although such diversion may deprive lower riparians of their
rights, -nor by reason of the fact that the water has all been dammed at a place far up
the stream. ...’ ” (Italics added.)

1 See also the case of *Lindblom v. Round Val. Water Co.* (1918) 178 Cal. 450 where the
2 diversion by way of an upstream dam had extended for a period of almost thirty (30) years before
3 there was a five (5) year interruption in diversion from the dam resulting in restoration of natural
4 flow to the downstream riparians.

5 When flow is re-established, riparian water rights attach to such flow.

6 **X. THE ARTIFICIAL CHANGES TO NATURAL SLOUGHS AND**
7 **THE CANALS, DITCHES AND BORROW PITS CONSTRUCTED**
8 **AS A PART OF OR AFTER RECLAMATION ARE WATERCOURSES**
9 **TO WHICH RIPARIAN RIGHTS ATTACH.**

10 The current WRV district facilities have been in place for more than eighty (80) years, and
11 the levees for more than one hundred thirty (130) years. The current facilities clearly substitute for
12 the natural sloughs and pre-reclamation water pool supplying Delta lands.

13 In the case of *Chowchilla Farms, Inc. v. Martin* (1933) 219 Cal. 1, the California Supreme
14 Court discusses the riparian nature of artificial watercourses and summarizes authorities at page 17,
15 “If it is nothing more than an artificial water course there can be no riparian rights upon it, whereas
16 if it is a substitute for a natural water course, so that it can be regarded as a natural water course,
17 riparian rights may attach to it.”

18 At page 18:

19 “Upon the other hand, however, the authorities hold that a watercourse,
20 although constructed artificially, may have originated under such circumstances as
21 to give rise to all the rights that riparian proprietors have in a natural and permanent
22 stream, or have been so long used as to be deemed by prescription natural
23 watercourses. Such is the case where the whole stream is diverted into the new
24 channel, and thereby the artificial channel is substituted for the natural. Where this
25 is done under such circumstances as to indicate that it is to be permanent, riparian
26 rights may attach to the artificial channel. And it is further held the where the
27 artificial watercourse was not created by joint action of the owners, it may become
28 such a one to which riparian right may attach, if the various owners along its course
have always treated it as such.”

25 The interconnection of the Duck Slough/High Ridge Levees watercourse to the various
26 rivers, sloughs, and the Delta Pool provides riparian status to the contiguous lands as to the
27 watercourse or water body providing water at the time. See *Turner v. James Canal Co.* (1909) 155
28 Cal. 82 and *Miller and Lux v. James* (1919) 180 Cal. 38.

1 The Duck Slough/High Ridge levee is clearly a stream-type watercourse which prior to the
2 construction of levees and drains as part of the reclamation process deposited alluvium from
3 upstream areas in a manner which created natural banks or levees. Because the area is Swamp and
4 Overflowed lands and subjected to the tides of the Delta Pool, the slough and adjoining land absent
5 reclamation would contact the natural ebb and flood tide flows of the Pool even in the absence of
6 tributary flow. The Delta Pool is a waterbody like a lake with flow from both upstream tributaries
7 and tides.

8 The subject Pak & Young and Mussi properties are contiguous to both the Duck
9 Slough/High Ridge levee stream-type watercourse and to the Delta Pool and are riparian to such
10 watercourses/waterbodies. Interruption of natural flows by the construction of levees and drains
11 does not change the riparian status of the subject lands. They are also contiguous to the artificial
12 channels, ditches and canals modifying the natural system.

13 **XI. THE SEVERANCE OF RIPARIAN WATER RIGHTS FROM**
14 **SWAMP AND OVERFLOWED LANDS OF THE DELTA IS BOTH**
15 **CONTRARY TO LAW AND PHYSICALLY IMPOSSIBLE.**

16 All of the lands presently owned by Mussi/Pak were swamp and overflowed lands patented
17 into private ownership. The intent of the swamp and overflowed lands acts was to encourage
18 reclamation by alteration of the existing condition of the Delta. In their undeveloped, unreclaimed
19 state, the Delta lands were Swamp and Overflowed lands, unfit for cultivation or other productive
20 use. Such being the case, the lands were patented into private ownership by acts of Congress and
21 mesne acts of the Legislature of the State of California, for the expressed purposed of reclamation.
22 The intent of the State of California was that the Swamp and Overflowed lands be reclaimed in
23 exactly the manner in which, for the most part, they now exist.

24 The Delta's Swamp and Overflowed lands were acquired by the State of California from
25 the United States and patented into private ownership by virtue of the Act of Congress of
26 September 28, 1850 (9 U.S. Stats. at Large, p. 519), commonly known as the Arkansas Act.
27 Various acts of the State of California to further and facilitate the reclamation of the Delta and
28 other areas were enacted, including the Act of May 1, 1851 (St. 1851, p. 409); the Act of April 28,
1855 (St. 1855, p. 189); the Act of April 21, 1858 (St. 1858, p. 198); the Act of April 18, 1859 (St.

1 1859, p. 340); the Act of May 13, 1861 (St. 1861, p. 355); the Act of April 27, 1863 (St. 1863, p.
2 684); the Act of April 2, 1866 (St. 1866, p. 799); the Act of March 28, 1868 (St. 1868, p. 507)
3 creating regular reclamation districts; the Act of March 16, 1872 (Stat. 1871-1872, p. 383); and
4 many others.

5 When the federal government conveyed the Delta lands to the State, the State actually
6 became duty bound to carry out in good faith the objects for which the grant was made, and thereby
7 assumed an obligation to reclaim the lands. “The object of the Federal Government in making this
8 munificent donation to the several States was to promote the speedy reclamation of the lands and
9 thus invite to them population and settlement, thereby opening new fields for industry and
10 increasing the general prosperity.” *Kimball v. Reclamation Fund Commissioners* (1873) 45 Cal.
11 344, 360. In *Gray v. Reclamation District No. 1500* (1917) 174 Cal. 622, 634, the California
12 Supreme Court noted the “[I]nterest of the state alone in the reclamation and bringing into use of
13 its Swamp and Overflowed land--an interest which is accentuated by the duties which it may have
14 assumed under its acceptance of the Arkansas grant.” In this regard, it was stated in *Kings County*
15 *v. Tulare County* (1898) 119 Cal. 509, 514-515 that “The purpose of the grant to the state-to wit,
16 the reclamation of the lands-seems to have been the governing principle of their disposition and
17 management. Certain results of the grant of swamp and overflowed lands to the state, and of our
18 legislation respecting those lands, seem clear enough, to wit: The grant was for the purpose of
19 securing their reclamation. The State has never deviated from a consistent course of legislation to
20 attain that purpose.”

21 Without any improvement or reclamation, the owner of lands within the Delta was
22 possessed of a variety of water rights. This included the traditionally thought of surface rights in
23 waterbodies and other watercourses consisting of riparian and appropriative rights. However, due
24 to the unique hydrologic conditions of the Delta, other water rights are implicated as well,
25 including groundwater, spring water, diffused surface water, and tidal flows. This same hydrology
26 created an environment that both the federal and state government deemed to be contrary to the
27 public interest: It created a swampy environment in which all of the Delta lands were periodically
28 inundated. In passing the original Arkansas Act and the action of the State of California that

1 followed, it was deemed to be in the public interest to seek to permanently alter the state of affairs
2 for the lands of the Delta, by reclamation efforts that would bring about a comprehensive alteration
3 of the existing water management practices and facilities in the Delta. This was the actual intent.

4 In *Kings County v. Tulare County, supra*, the California Supreme Court observed that “The
5 purpose of the grant [pursuant to the Arkansas Act] was to enable the state to reclaim the lands by
6 means of levees and drains.” 119 Cal. 511. The comprehensive water management system in the
7 Delta, by virtue of such reclamation efforts, brought about a fundamental change in many of the
8 hydraulic forces within the Delta. By virtue of the Arkansas Act and the State and private action
9 that followed, no longer was it accepted that water had to periodically inundate the Delta lands -
10 substantial levee systems would be engineered to eliminate the inundation that periodically
11 occurred. The levees at the foundation of reclamation would, as intended by the State of
12 California, fundamentally change the flow of water in the countless waterways of the Delta. By
13 cutting off much of the Delta lands inside the levee systems from the water that flowed to the land
14 and hundreds of sloughs, riparian lands in the Delta were impacted virtually everywhere - all
15 brought about and caused by the publicly desired reclamation that included levee construction.

16 While the levees were the most visible monuments to the physical change of the Delta
17 altering the conveyance and availability of water to Delta lands, a water table at or immediately
18 below the surface created other conditions to be remedied by the reclamation encouraged by the
19 Arkansas Act and the ensuing acts of the state of California. The intricate, natural web of surface
20 channels, creeks, and sloughs, the percolating and seepage waters appearing in open springs, and
21 the marshy lands influenced by both the tidal flows and seasonal flood flows, all had to be dealt
22 with on the interior of the leveed Delta lands. Without control of these hydraulic forces, the leveed
23 islands would be little more than a bog or lake surrounded by a wall of levee. But also, the control
24 of those same hydraulic forces were the instruments of alteration for the delivery of water within
25 and to the Delta lands. The Delta lands within the levees had to be internally drained and managed
26 for irrigation to accomplish the reclamation objectives of the state and federal governments. The
27 accepted and anticipated manner in which that would be accomplished was a fundamental
28 alteration of the way water within a levee system was controlled, both to convey water to and

1 transport it away from the lands. This control was a system of canals, ditches, floodgates,
2 sluiceways, siphons, pumps, and other works which would regulate the flow of water within the
3 leveed lands, and thus create artificial channels, creeks, and the like to alter the natural ones. Just
4 as the levees had altered the watering and dewatering of the lands - so too would the intricate
5 internal systems alter the watering and dewatering of the lands, thus effecting a fundamental
6 change in the water delivery to the lands within the levee system. No longer would natural
7 waterways, springs, and percolating waters wet the land. Instead, an organized and controlled
8 system would do so. This was the intent of the federal and State governments, and it would be
9 loathsome for either to maintain a position contrary to the accomplishment of exactly what they
10 intended.

11 Critical to the economic viability of the lands and economic support of the levees and
12 drainage necessary to reclaim and sustain the reclamation is the ability to cultivate various crops
13 including the timely application and utilization of water for surface and sub-irrigation. Consistent
14 with its obligation to the Federal Government the State has encouraged the private investment in
15 the reclamation of the Swamp and Overflowed Lands and enjoyed the benefit of the general
16 prosperity resulting therefrom. The State has monitored the irrigation and use of water on lands in
17 the Delta and has for many years recognized the Delta lowlands including the subject parcels as
18 enjoying riparian water rights. See Central Valley Project, Delta Lowlands Service Area
19 Investigations Report Area DL-9, Stockton to Middle River and Vicinity, January 1964 (a copy of
20 the report is WIC 8B). Included in said excerpts is "Table 8. Unit Consumptive Use of Water In
21 Sacramento-San Joaquin Delta" which shows that for every use there is a net savings of water over
22 "Tule and Swamp" which is the unreclaimed condition.

23 Because the subject parcels are "Swamp and Overflowed Lands," their productive use was
24 and is clearly dependent upon reclamation requiring construction, operation and maintenance of
25 levees and drains. In order to fund such reclamation, economically viable agriculture was and is
26 required. Clearly a Grantor of a parcel being separated from a waterway would receive no benefit
27 from depriving the separated parcel of a riparian water supply. If the separated parcel
28 could not economically bear the burden of its share of the cost of reclamation, then a greater

1 burden would fall on the Grantor. Additionally, the water consumption resulting from unreclaimed
2 land "Tule and Swamp" is clearly higher than that from irrigated cropland. Due to the high water
3 table and/or inundation, the abandoned land would return to swamp or a waterbody. For swamp
4 and overflowed lands the intent to convey riparian water rights with the land should be clear and
5 only a clear expression to the contrary should be viewed as negating such intent.

6 Maintenance of riparian rights during and throughout the reclamation process, and its
7 supplanting of the natural system with an artificial system, is fully supported by the law - in part
8 because there are circumstances in which "an artificial watercourse may originate in such a manner
9 as to give rise to riparian rights; such as where an existing stream is diverted into a new channel,
10 and the artificial channel is permanently substituted for the natural one." *Tusher v. Gabrielsen*
11 (1998) 68 Cal.App. 4th 131, 134-135. This is precisely what happened in Delta reclamation. The
12 construction of levees and drainage and irrigation systems within the Delta lands were permanently
13 substituted for the numerous natural watercourses within the Delta lands, including the countless
14 tiny sloughs, creeks, rivulets, and the like.

15 **XII. EQUITABLE ESTOPPEL FORECLOSES ANY OPPORTUNITY FOR**
16 **THE SWRCB TO CONTEST THE RIGHTS OF OWNERS OF**
17 **RECLAIMED SWAMP AND OVERFLOWED LANDS TO WATER.**

18 As stated, the reclamation was not only contemplated by the State and Federal government
19 - it was expressly intended and encouraged by multiple acts of the legislature over a long period of
20 time. This was done for what then were, and what remain, a number of benefits, including
21 commerce, agriculture, transportation, navigation, health, and development. It was well known
22 what reclamation efforts were expected to be accomplished, as was the substantial undertaking and
23 expense necessary to accomplish the reclamation. Furthermore, it was known or should have been
24 known that a permanent change would be brought about in the way the reclaimed lands were
25 watered and dewatered. Since the initial reclamation efforts and improvements, great expense has
26 been incurred and is continuing to be incurred in maintaining and improving those reclamation
27 works. The methodology and deployment of practices for watering and dewatering the reclaimed
28 lands has been well known, and is and was open and notorious - for the world, including the State
of California, to see. Over the years there has been a continued reliance by private parties, and

1 acquiescence by the State, in the diversion and application of water by Delta water users. Further,
2 the subject lands have always been regarded as having the reputation of being possessed of riparian
3 rights. Moreover, there has been great public and private reliance and expectation upon the
4 continued validity and enjoyment of Delta water rights, and the continued maintenance and
5 improvement of the reclamation works. Indeed, it is a matter of common knowledge that without
6 the continued maintenance of these reclamation works, the water quality and supply of many
7 outside the Delta would be impaired. Again, all of this has been not only with the knowledge of,
8 but the actual encouragement of, the State of California. Good conscience and fair dealing does
9 not allow the State of California to literally renounce the water rights enjoyed in the Delta based on
10 the very reclamation the State of California encouraged.

11 The State of California's tacit participation in the efforts necessary for Delta reclamation
12 requires application of the doctrine of estoppel as applied in *City of Long Beach v. Mansell* (1970)
13 3 Cal.3d. 462, 487-501. At 3 Cal.3d 488, the California Supreme Court repeated from Lord
14 Denman's opinion in *Packard v. Sears & Barrett* (K.B. 1837) 6 Ad. & Ell. 369, 474, the classic
15 elements of the doctrine: "[T]he rule of law is clear, that, where one by his words or conduct
16 wilfully causes another to believe the existence of a certain State of things, and induces him to act
17 on that belief, so as to alter his own previous position, the former is concluded from averring
18 against the latter a different state of things as existing at the same time;" Noting this as a long
19 established doctrine in this state, in *City of Long Beach v. Mansell, supra*, the California Supreme
20 Court quoted its earlier decision in *Seymour v. Oelrichs* (1909) 156 Cal. 782, in turn quoting the
21 U.S. Supreme Court: "The vital principle is that he who by his language or conduct leads another
22 to do what he would not otherwise have done shall not subject such person to loss or injury by
23 disappointing the expectations upon which he acted. Such a change of position is sternly
24 forbidden. It involves fraud and falsehood, and the law abhors both." (156 Cal. at p. 795.)

25 Qualitatively, the government action in the *City of Long Beach* case was much less
26 significant than here. Nevertheless, the California Supreme Court concluded "without hesitation
27 that the activities, representations, and conduct of the State and its sub-trustee the city during the
28 period here in question rise to the level of culpability necessary to support an equitable estoppel

1 against them.” Later, the Third Appellate District considered equitable estoppel in *Phelps v. State*
2 *Water Res. Control Bd.* (2007) 157 Cal.App. 4th 89, repeating the two-part test when the
3 government is involved, including the four classic elements of estoppel, from *J.H. McKnight*
4 *Ranch, Inc. v. Franchise Tax Board* (2003) 110 Cal.App.4th 978, 991:

5 “First, a court must determine whether the traditional elements
6 necessary for assertion of an estoppel against a private party are
7 present. These elements include the following: ‘(1) The party to be
8 estopped must be apprised of the facts; (2) he must intend that his
9 conduct shall be acted upon, or must so act that the party asserting
10 the estoppel had a right to believe it was so intended; (3) the other
11 party must be ignorant of the true state of facts; and (4) he must rely
12 upon the conduct to his injury.’ [Citation] Second, the court must
13 weigh the equities and consider the impact on public policy of
14 permitting an estoppel in a given case.”

15 Here, it is beyond doubt the State was apprised of how the reclamation would be
16 accomplished, and the State intended that its conduct would be acted upon in the precise manner in
17 which it was acted upon. Further, there is no evidence that those relying upon the State’s conduct
18 were otherwise aware nor did the State make any effort to make them aware to the contrary, and
19 the owners clearly relied on the continued viability of their water supply and the underlying rights.
20 Not only was this the case during initial reclamation, but for the over 100 years that have passed.
21 Over the years there has continued actual State participation in and continued encouragement of
22 the reclamation. Each of the four classic elements is thus well established.

23 As to the second part of the test, the impact on public policy, there is but one reasonable
24 conclusion and it is inescapable. If one cannot rely upon the government in this type of situation,
25 the consequences will be dire. To be sure, it would work a great fraud and injustice were the State
26 to be allowed to repudiate the entitlement of the owners of the reclaimed lands to a water supply
27 consistent with their time-honored use.

28 **XIII. THE HYDROLOGIC CONNECTION BETWEEN THE SHALLOW
GROUNDWATER AND THE SURFACE STREAMS AFFORDS MUSSI
AND PAK & YOUNG RIPARIAN AND/OR OVERLYING RIGHTS TO
DIVERT DIRECTLY FROM THOSE STREAMS.**

In *Anaheim Union Water Co. v. Fuller* (1907) 150 Cal. 327, the California Supreme Court
held that a landowner with lands overlying groundwater that is hydrologically connected to a

1 surface stream but whose lands are separated from the surface stream on the surface does not have
2 “the right to divert water from the surface stream, conduct or transport it across intervening land to
3 the tract thus separated from the surface stream, and there apply it to use on the latter, *to the injury*
4 *of lands which abut upon the proper banks of the surface stream . . .*” (*Id.*, p. 332, emphasis
5 added.) The question left unresolved by *Anaheim*, and at issue herein, is whether such a landowner
6 can lawfully make such diversions if there is no alleged, much less actual, injury to any such lands
7 or to any other riparian or overlying water user with rights to that common underground/surface
8 water supply, which is the case in the instant proceedings. As will be explained, the answer should
9 be yes, it *can* lawfully make such diversions. Such a determination is entirely consistent with, and
10 in furtherance of, *Anaheim*, *Hudson v. Dailey* (1909) 156 Cal. 617, *Turner v. James Canal Co.*
11 (1909) 155 Cal. 82, and the well-established “no-injury rules” set forth in case law and statutory
12 law with regard to changing points of diversion from a common supply.

13 **A. The Shallow Groundwater Is In “Immediate Connection” With The Surface Streams**
14 **And, Hence, The Landowners Overlying That Groundwater Are Riparian To Those**
15 **Streams.**

16 In *Hudson v. Dailey* (1909) 156 Cal. 617 (*Hudson*), the Court held:

17 If the water in the underground strata is in such *immediate connection* with
18 the surface stream as to make it a part of the stream, as the plaintiff seems to
19 contend, *then the defendants’ lands overlying such water must be considered as*
20 *also riparian to the stream*, and, under the law of riparian rights, they have a
21 common right with the plaintiff to the use of the water.

22 (*Id.*, pp. 626-627, emphasis added.) In such an “immediate connection” situation, being “riparian
23 to the stream” means the landowner has “a right to take its share of the water from the main river at
24 any convenient point thereon, whether such point of diversion is upon its own land or not, so long
25 as such taking does not injuriously affect the rights of owners of land abutting upon the river
26 between the point of diversion and the company’s riparian land.” (*Turner v. James Canal Co.*
27 (1909) 155 Cal. 82, 91-92.)

28 Respondents submit that the shallow groundwater underlying Mussi and Pak & Young’s
lands is indeed “in such immediate connection with the surface stream[s] as to make it a part of the
stream[s] . . .” (*Hudson*, pp. 626-627.) Civil Engineer, Christopher H. Neudeck, for example,
explains this immediate connection as follows:

1 For the area of concern [the California Department of Water Resources] has
2 a recent study [see Mussi/Pak & Young Exhibit 3V, "pdf" pp. 46-92, "Reclamation
3 District 544 Seepage Monitoring Study 2000-2001] which . . . confirms my prior
4 conclusions that due to the subsurface soils, there is a direct connection between the
5 shallow groundwater and the waters in the neighboring channels. When the river
6 goes up, the groundwater goes up and vice-a-versa.

7 This hydrologic conductivity is important to understand the local water
8 supplies. The entire Delta is one big pool of water; some in the channel and some in
9 the soils. There is no net difference in the amount of water in the Delta channels
10 when local diverters take from neighboring channels, pump from shallow
11 groundwater, or farm crops which draw from the shallow groundwater. Taking
12 water from one place is virtually the same as from another. . . .

13 I therefore conclude that if these four diverters which are the subject of [the
14 *Phelps* WRO 2004-0004] hearing were forced to shift to shallow wells for
15 irrigation, or farm crops which had root zones reaching to the shallow groundwater,
16 there would be no difference in the amount of water available in the surrounding
17 channels.

18 (Mussi/Pak & Young Exhibit 3V, pp. 4-5.)

19 In addition to Mr. Neudeck's testimony and the DWR study referenced therein, there is
20 considerable additional evidence supporting the immediacy of the connection between the shallow
21 groundwater underlying Mussi and Pak & Young's lands (and within the entire Delta for that
22 matter) and the surface streams. See for example, the Testimony of Dante J. Nomellini, Sr.
23 (Mussi/Pak & Young Exhibit 9) and the following exhibits: Mussi/Pak & Young Exhibit 9E,
24 "Estimation of Delta Island Diversions and Return Flows, DWR, February 1995"; Mussi/Pak &
25 Young Exhibit 9F, "DWR's January 30, 2009, letter to MWD, et al. re proposed Delta Wetlands
26 water transfer"; Mussi/Pak & Young Exhibit 9G, "Excerpts from DWR's 2009 Webb Tract
27 Transfer Pilot Study and Office Memos"; and Mussi/Pak & Young Exhibit 9H, "Investigation of
28 the Sacramento-San Joaquin Delta Report No. 4, Quantity and Quality of Waters Applied to and
29 Drained From the Delta Lowlands, Department of Water Resources, July 1956."

30 While it is difficult to imagine a more immediate connection, as well as one that is more
31 well-recognized, if the SWRCB does not believe the requisite "immediate connection" within the
32 meaning of *Hudson* exists between the shallow groundwater and the surface streams, then the
33 SWRCB must thoroughly explain the basis for that belief and, unlike its decision in WRO 2004-
34 0004, it should meaningfully define what it believes would constitute such an "immediate
35 connection" and the authority it is relying on to so define such a connection. If the SWRCB

1 equates “immediate connection” with so-called “underflow” or “underground flow,” then the
2 SWRCB must thoroughly define “underflow” and “underground flow” (which it failed to do in
3 WRO 2004-0004) and explain why the immediate connection *Hudson* is referring to should be
4 equated with those definitions.

5 It should be noted that in WRO 2004-0004 (at page 13) the SWRCB stated that “[t]he
6 difference in quality of the groundwater and the surface water does not support, and actually tends
7 to contradict, the assertion that the groundwater is the underground flow of the Middle River or the
8 San Joaquin River.” That statement is misplaced. It is common knowledge that the farming
9 operations taking place on Delta lands (and on all farmlands throughout the world for that matter)
10 concentrate the salt content of the applied water in the soils and groundwater (where shallow
11 groundwater exists as it does under Mussi and Pak & Young’s lands) underlying the crops as a
12 result of evaporation and the crops’ consumptive use of the water which leaves the salts behind in
13 the soils and groundwater. The suggestion that such a water quality difference detracts from the
14 immediacy of the groundwater/surface water connection is misplaced. Under that logic, a slough
15 which flows into a river would not be immediately connected to that river if the water in the slough
16 has a higher concentration of salts than the water in the river, which is clearly not the case.

17 **B. Assuming *Arguendo* That The Shallow Groundwater Is *Not* In “Immediate
18 Connection” With The Surface Streams, The Landowners Overlying That
19 Groundwater Still Have The Right To Divert Directly From Those Streams Within
20 The Scope Of Their “Overlying Rights.”**

21 In *Hudson*, supra, 156 Cal. 617, the court went on to address the situation where it is
22 assumed that “the underground strata is [not] in such immediate connection with the surface stream
23 as to make it a part of the stream” (*id.*, pp. 626-627) and, thus, where it is assumed that the
24 landowner overlying that underground strata is not technically considered a “riparian” to the
25 surface stream. Whether Mussi and Pak & Young’s right to divert from the surface streams in such
26 a situation is deemed a “riparian” right or part of their “overlying” rights, the result is the same. In
27 either case Mussi and Pak & Young *do* have the right to divert from the surface streams at least to
28 the extent they can obtain access to the surface streams and can divert from those streams without
injuring any other overlying or riparian right holder with “correlative” rights to that “common

1 [underground/surface] supply.” (*Id.*, p. 628.) In the instant case, Mussi and Pak and Young do
2 have access to the surface streams and there is no allegation that their diversions from those
3 streams injure any other correlative water right holder with rights to that common
4 underground/surface supply.

5 As *Hudson* explains:

6 [The underground percolating waters] together with the surface stream supplied by
7 them, *should be considered a common supply*, in which all who by their natural
8 situation have access to it have a common right, and of which *they may each make a*
9 *reasonable use upon the land so situated, taking it either from the surface flow, or*
directly from the percolations beneath their lands. The natural rights of these
defendants and the plaintiff in this common supply of water *would therefore be*
coequal, except as to quantity, and correlative.

10 (*Id.*, p. 628, emphasis added.) As can be seen, *Hudson* not only plainly states that overlying
11 landowners “may . . . take either from the surface flow, or . . . from the percolations . . .,” but also
12 plainly declares that such rights are “coequal, except as to quantity . . .” *Hudson* does not state,
13 for example, that such rights are coequal “except as to quantity [*and source*] . . .” (*Ibid.*) Instead,
14 they are limited only as to quantity since the potential quantity which any riparian or overlying user
15 may put to reasonable and beneficial use will vary depending on the nature of, and reasonableness
16 and non-wastefulness of, the various uses taking place on their respective lands.

17 Accordingly, even in this “less immediate connection” situation, *Hudson* confirms that it is
18 indeed within the scope of the overlying landowner’s “overlying rights” to divert its fair share of
19 that common underground/surface supply “either from the surface flow, or . . . from the
20 percolations . . .” (*Id.*)

21 **C. In A Common Underground/Surface Supply Situation It Should Be Deemed To Be**
22 **Within The Scope Of A Landowner’s Coequal And Correlative Rights To That**
23 **Common Supply To Divert From The Surface Component Of That Supply In The**
Absence Of Injury To Others With Rights To That Supply.

24 In the event the SWRCB does not find an “immediate connection” between the shallow
25 groundwater and surface waters where *Hudson* makes it clear the “overlying” landowner is also
26 “riparian to the stream,” and, hence, the SWRCB finds that the situation involves the “less
27 immediate connection” situation, then to the extent the SWRCB determines *Hudson*, for whatever
28 reason, should not be read to say that it is within the scope of an overlying user’s “overlying rights”

1 to take its fair share of the common underground/surface supply directly from the surface stream, it
2 is clear that *Hudson* does not say such a user cannot, and Respondents respectfully request that the
3 SWRCB make a determination that such a user can indeed lawfully change its point of diversion to
4 the banks of such surface streams so long as it can do so without causing injury to any other
5 overlying or riparian water right holder with coequal and correlative relative rights to that common
6 supply. Such a determination would be fully consistent with, and in furtherance of, *Anaheim*,
7 *Hudson*, *Turner* and the well-established “no-injury rules” set forth in case law and statutory law
8 with regard to changing points of diversion from a common supply.

9 With respect to *Anaheim*, it is important to note that *Anaheim* could have very easily said
10 that such an overlying user could *never* take its fair share directly from the surface stream. It, of
11 course, clearly did not and, instead, merely stated that such an overlying user could not do so *if it*
12 resulted in “injury [to the] lands which abut upon the proper banks of the surface stream”
13 (*Anaheim Union Water Co. v. Fuller, supra*, 150 Cal. 327, 323.) The Court specifically left the
14 issue open for further development by the courts or even the SWRCB:

15 It is not necessary here to [definitively] decide what rights to the use of the
16 underground flow [or percolations] of a stream may, by virtue of its position, attach
17 to land which abuts upon, or extends into or over such waters, but does not extend
18 to the surface stream.

19 (*Ibid.*)

20 The principle urged by Respondents would also be fully consistent with, and in furtherance
21 of, the principles set forth in *Turner v. James Canal Co.* (1909) 155 Cal. 82. *Turner* addressed the
22 question to what extent can a landowner whose lands are riparian to a slough that is hydrologically
23 connected to a main river change its point of extraction of its correlative share of that common
24 surface supply from the four corners of its land that is riparian to the slough to another location
25 along the main river or slough that is outside the four corners of his riparian land. (See *id.*, pp. 84-
26 85.) The answer was that it was indeed within the scope of the correlative right holder’s rights to
27 extract its share of that common surface supply “at any convenient point” from either the slough or
28 even “from the main river” which the slough is hydrologically connected to, regardless of whether
it was in or outside the boundaries of the correlative right holder’s riparian lands. (*Id.*, pp. 91-92.)

1 The only caveat was that the diversion from any such “convenient point” could “not injuriously
2 affect the rights of owners of land abutting upon the river between the point of diversion and the
3 [landowner’s] riparian land.” (*Ibid.*)¹¹

4 *Turner* and *Hudson* are similar in that they each recognize that when two bodies of water,
5 either a slough and a main river (*Turner*) or groundwater and surface water (*Hudson*), are
6 hydrologically connected and, hence, form a single common supply, then those with water rights
7 entitling them to extract their fair share of that common supply have coequal, except as to quantity,
8 and correlative rights to that common supply. And it is precisely because of the coequal and
9 correlative nature of those rights that it should be deemed properly “within the scope” of those
10 rights for the holders of those rights to extract their fair share of that common supply from any
11 convenient access point to that supply so long as such extractions do not injure the coequal and
12 correlative relative rights of all of the other water right holders possessing the same coequal and
13 correlative rights to that common supply.

14 To the extent *Hudson* has not already established (for over a hundred years) that the same
15 principles set forth in *Turner*, regarding the ability of a correlative right holder to a common supply
16 to change its point of extraction of that common supply, likewise apply to the situation where the
17 common supply is between groundwater and surface water, as opposed to a slough and a main
18 river, then Respondents respectfully submit that the SWRCB should determine that such is the
19 case.

20 **D. The Requested Determination Would Be Fully Consistent With The Well-Established**
21 **“No-injury Rules” Set Forth In Case Law And Statutory Law With Regard To**
22 **Changing Points Of Diversion From A Common Supply.**

24 ¹¹ “Inasmuch as the J. G. James Company’s lands are riparian to Fresno slough, and the
25 slough is, for a considerable period each year, connected with, and properly a part of, the San
26 Joaquin river, it follows that, for the irrigation of such lands, it has, during such periods, *a right to*
27 *take its share of the water from the main river at any convenient point thereon, whether such point*
28 *of diversion is upon its own land or not, so long as such taking does not injuriously affect the*
rights of owners of land abutting upon the river between the point of diversion and the company’s
riparian land.” (*Turner, supra*, p. 91-92, emphasis added.)

1 The ability of a water right holder to change its point of diversion from one point on a
2 hydrologically connected water supply to another point on that same supply so long as others are
3 not injured by the change is well-established in the law. For “appropriative” water rights other
4 than those acquired under the “Water Commission Act or [the Water] Code,” this ability is
5 codified in Water Code section 1706. For appropriative rights acquired under said act and code,
6 this ability is codified in Water Code section 1701 and 1702. (See also, Wat. Code, §§ 1725 &
7 1735-1736 [changes in points of division involving the transfer of water].)

8 As discussed above, since at least the 1909 *Turner* case, it has also been well-established
9 that riparians could also freely change their point of diversion from one point on a hydrologically
10 connected surface supply to another point on that same supply so long as no other riparians with
11 similar coequal and correlative rights between the point of diversion and the diverter’s riparian
12 land were injured thereby.

13 With regard to overlying users, the same was true at least as far back as 1911. As the Court
14 explains in *Burr v. Maclay Rancho Water Co.* (1911) 160 Cal. 268, so long as an overlying
15 landowner is not “taking the water to distant lands *not overlying the common supply*,” the
16 landowner may lawfully take the water from underneath one tract and apply it to a separate tract
17 that overlies that same common supply. (*Id.* at 273, emphasis added.) (See also, *Fryer v. Fryer*
18 (1944) 63 Cal.App.2d 343 [such a taking is “within [such a landowners’] rights” as a correlative
19 right holder to that common supply].) Such a taking, of course, is still subject to the requirements
20 that it be reasonable and non-wasteful under the correlative rights’ doctrine.

21 Moreover, it is not uncommon and is allowable, as has been allowable since at least 1903,
22 for water right holders with rights to a common source to share a particular point of diversion from
23 that common source:

24 Where a number of persons owning land are each entitled to take water from
25 a common stream or source, for use upon their respective tracts of land, either by
26 virtue of an appropriation under the Civil Code or by prescription, or as riparian
27 owners [or overlying owners], . . . [t]he owners of such water-rights may make a
28 joint diversion, and may carry the water from the point of diversion in a common
conduit, made with common funds”

1 (*Hildreth v. Montecito Creek Water Co.* (1903) 139 Cal. 22, 29; see also, *Samuel Edwards*
2 *Associates v. Railroad Commission of State of California* (1925) 196 Cal. 62, 72 [“There is no
3 doubt [the type of joint diversion and arrangement in *Hildreth*] may be done ”].)

4 As has been said, the position Respondents are advocating is fully consistent with the
5 foregoing well-established “no injury” rules with regard to changes in places of diversion.
6 Pursuant to the correlative rights doctrine it does not makes sense to allow a landowner overlying a
7 common underground/surface water supply whose land is not contiguous to the surface stream to
8 take water from the groundwater immediately adjacent to a surface stream, but not take the water
9 directly from the surface stream, especially when noone with coequal and correlative rights to that
10 common supply is injured by such takings. In a common underground/surface water supply
11 situation, by definition, groundwater extractions adversely affect the volume of water in the stream
12 and surface water extractions adversely affect the volume of water in the underground. In the
13 instant proceedings, as Engineer Neudeck explains, “Taking water from [the surface streams] is
14 virtually the same as [taking it from the underground],” and in either case “there would be no
15 difference in the amount of water available in the surrounding channels.” (Mussi/Pak & Young
16 Exhibit 3V, pp. 4-5.)

17 Any particular common underground/surface common supply situation will involve its own
18 unique circumstances and conditions. In the instant proceedings, those correlative right holders,
19 such as the farmers within Roberts Island, tend to find it more economical and more convenient to
20 extract their fair share of the common supply from the surface component of that supply rather than
21 from the groundwater. In this same common underground/surface common supply situation,
22 however, it may very well be preferable for some landowners, depending on what purpose they
23 intend to use the water, e.g., domestic or otherwise, to extract their share of the common supply
24 from the groundwater.

25 While the reasonableness or potential wastefulness of any particular correlative use of
26 water in a common underground/surface water supply setting will vary greatly among different
27 settings and be influenced by a host of site-specific factors, the reasonableness or potential
28

1 wastefulness of Mussi or Pak & Young's surface diversions are not being challenged or at issue in
2 the instant CDO proceedings.

3 For the foregoing reasons, Respondents respectfully submit that the SWRCB should
4 determine, at a minimum, that it is indeed properly within the scope of Mussi and Pak & Young's
5 coequal and correlative rights to the common underground/surface water supply to divert their fair
6 share of that supply from the banks of the surface component of that supply so long as they can do
7 so without causing injury to any other overlying or riparian water right holder with coequal and
8 correlative rights to that supply. If and when there is a challenge by any such coequal and
9 correlative right holder alleging injury from such surface diversions, then, at that time, the SWRCB
10 (or rather a court) could address the substance of the alleged injury and curtail those diversions as
11 necessary to avoid that injury.

12 **XIV. WHEN WHITNEY SEPARATED HIS LANDS FROM THE BANKS**
13 **OF VARIOUS WATERWAYS HE RETAINED THE MUSSI**
14 **PARCEL'S RIPARIAN RIGHTS TO THOSE WATERWAYS.**

15 Mussi Exhibit 3B contains a copy of the patent from the State of California to J. P. Whitney
16 ("Whitney"), dated November 24, 1876, and includes a map of the conveyed lands prepared by
17 KSN, Inc. Mussi's parcel at issue herein, i.e., APN 131-170-03, was part of the lands conveyed in
18 that patent, and at the time of the patent, abutted the banks of numerous waterways including, but
19 not limited to, the San Joaquin River, Burns Cut-Off, Duck Slough, Middle River, Trapper Slough,
20 Whiskey Slough, Black Slough, etc. As Whitney subdivided and sold parts of this patented land,
21 the land which Whitney retained after such sales began to lose its surface connections to the banks
22 of various waterways.

23 In *Murphy Slough Assn. v. Avila* (1972) 27 Cal.App.3d 649, the court discussed the
24 situation where the grantor loses its surface connection to the banks of a waterway as a result of a
25 deed of conveyance and held as follows:

26 Even if the trial court had concluded that the deed conveyed a fee interest to
27 the grantee, it seems clear to us such a conveyance would have no effect on the
28 riparian rights of the grantors' remaining lands not included in the conveyance,
absent some expression to the contrary. [Citations.]

1 (*Id.*, p. 658, emphasis added; see also, *id.*, p. 657 [“Absent some expression of intent to convey or
2 sever rights in lands not included in the conveyance, the grant must be deemed inapposite to a
3 consideration of the riparian status of the excluded land”].)

4 In situations where the deed fails to include the requisite expression of intent to sever the
5 grantor’s riparian rights to the banks of a particular waterway and, hence, the grantor retains such
6 riparian rights, those lands could never lose those rights through future subdivisions of those lands
7 because those lands could never be further separated from the banks of those waterways—such
8 separation is a one time event. As the court explains in *Rancho Santa Margarita v. Vail* (1938) 11
9 Cal.2d 501, 539, “If the grant deed conveys [or in this case, preserves] the riparian rights to the
10 noncontiguous parcel, that parcel retains its riparian status.” Having retained its riparian status, the
11 grantor’s riparian rights to the separated waterways, from those separations forward, remain
12 “vested right[s] inherent in and a part of the land[s] [citations] and [forever] pass[] by a grant of
13 land to the grantee even though the instrument is silent concerning the riparian right [citations].”
14 (*Murphy Slough Assn. v. Avila* (1972) 27 Cal.App.3d 649, 655-656; see also, *Strong v. Baldwin*
15 (1908) 154 Cal. 150, 157 [the effect of retention of riparian rights at the time of separation from a
16 waterway was “to make the riparian right ‘parcel of the land’ conveyed, and it passed as such in all
17 subsequent conveyances of such land”].)

18 While the examination of the separations of Whitney’s lands from the banks of various
19 waterways could and should, if necessary, be performed in relation to *all* “natural” waterways,
20 including all interior sloughs, etc., for purposes of determining Mussi’s riparian rights in
21 connection with the instant CDO proceedings, it is sufficient to merely examine the separation
22 from the banks of the San Joaquin River, Trapper Slough, Whiskey Slough and Black Slough.
23 (Though, again, if this instant examination, for whatever reason, proves insufficient to resolve the
24 matters at issue herein, then further examinations should be performed once the SWRCB makes
25 findings as to what “natural” waterways were in existence during the time periods when Whitney’s
26 patented lands were subdivided into their present dimensions.)

27 **A. Whitney Retained The Mussi Parcel’s Riparian Rights To The San Joaquin River,
28 Trapper Slough, Whiskey Slough And Black Slough.**

1 As noted above, the land within the Mussi parcel was within the lands in the patent from
2 the State of California to Whitney and, hence, was at one time part of a considerably larger parcel
3 that abutted the banks of the San Joaquin River, Trapper Slough, Whiskey Slough and Black
4 Slough. (See deed and map at Mussi Exhibit 3B.)

5 Via Whitney's December 12, 1876 conveyance to M. C. Fisher, Whitney separated his
6 lands to the east of Duck Slough (which include the Mussi parcel) from the banks of the San
7 Joaquin River, Trapper Slough, Whiskey Slough and Black Slough. (See Mussi Exhibit R-37.)
8 (Thereafter, on January 15, 1877, Whitney transferred all or most of its lands to the east of Duck
9 Slough [including the Mussi parcel] to M. C. Fisher [see Mussi Exhibit R-38].)

10 Because the December 12, 1876 conveyance to M. C. Fisher contains no expression
11 whatsoever that Whitney intended to eliminate his riparian rights to divert from the banks of the
12 San Joaquin River, Trapper Slough, Whiskey Slough and Black Slough, all of Whitney's retained
13 lands to the east of Duck Slough, including the Mussi parcel, retained and preserved their riparian
14 rights to divert from those banks at the time those lands were separated from those banks. (See
15 *Murphy Slough, supra.*) Accordingly, from the time of that conveyance forward, those rights
16 remained "part and parcel" of those lands and could not be severed via any further subdivisions of
17 those lands. (See *Rancho Santa Margarita, Murphy Slough Assn.* and *Strong* discussed above.)

18 **XV. WHEN WHITNEY SEPARATED HIS LANDS FROM THE**
19 **BANKS OF VARIOUS WATERWAYS HE RETAINED THE PAK AND**
20 **YOUNG PARCEL'S RIPARIAN RIGHTS TO THOSE WATERWAYS.**

21 Pak & Young Exhibit 3B contains a copy of the patent from the State of California to J. P.
22 Whitney ("Whitney"), dated November 24, 1876, and includes a map of the conveyed lands
23 prepared by KSN, Inc. Pak & Young's parcel at issue herein, i.e., APN 131-180-07, was part of
24 the lands conveyed in that patent and, at the time of the patent, abutted the banks of numerous
25 waterways including, but not limited to, the San Joaquin River, Burns Cut-Off, Duck Slough,
26 Middle River, Trapper Slough, Whiskey Slough, Black Slough, etc. As Whitney subdivided and
27 sold parts of this patented land, the land which Whitney retained after such sales began to lose its
28 surface connections to the banks of various waterways.

1 In *Murphy Slough Assn. v. Avila* (1972) 27 Cal.App.3d 649, the court discussed the
2 situation where the grantor loses its surface connection to the banks of a waterway as a result of a
3 deed of conveyance and held as follows:

4 Even if the trial court had concluded that the deed conveyed a fee interest to
5 the grantee, it seems clear to us such a conveyance would have no effect on the
6 riparian rights of the grantors' remaining lands not included in the conveyance,
absent some expression to the contrary. [Citations.]

7 (*Id.*, p. 658, emphasis added; see also, *id.*, p. 657 [“Absent some expression of intent to convey or
8 sever rights in lands not included in the conveyance, the grant must be deemed inapposite to a
9 consideration of the riparian status of the excluded land”].)

10 In situations where the deed fails to include the requisite expression of intent to sever the
11 grantor’s riparian rights to the banks of a particular waterway and, hence, the grantor retains such
12 riparian rights, those lands could never lose those rights through future subdivisions because those
13 lands could never be further separated from the banks of that waterway—such separation is a one
14 time event. As the court explains in *Rancho Santa Margarita v. Vail* (1938) 11 Cal.2d 501, 539,
15 “If the grant deed conveys [or in this case, preserves] the riparian rights to the noncontiguous
16 parcel, that parcel retains its riparian status.” Having retained its riparian status, the grantor’s
17 riparian rights to the separated waterways, from those separations forward, remain “vested right[s]
18 inherent in and a part of the land[s] [citations] and [forever] pass[] by a grant of land to the grantee
19 even though the instrument is silent concerning the riparian right [citations].” (*Murphy Slough*
20 *Assn. v. Avila* (1972) 27 Cal.App.3d 649, 655-656; see also, *Strong v. Baldwin* (1908) 154 Cal.
21 150, 157 [the effect of retention of riparian rights at the time of separation from a waterway was
22 “to make the riparian right ‘parcel of the land’ conveyed, and it passed as such in all subsequent
23 conveyances of such land”].)

24 While the examination of the separations of Whitney’s lands from the banks of various
25 waterways could and should, if necessary, be performed in relation to *all* “natural” waterways,
26 including all interior sloughs, etc., for purposes of determining Pak/Young’s riparian rights in
27 connection with the instant CDO proceedings, it is sufficient to merely examine the separation
28 from the banks of Middle River. (Though, again, if this instant examination, for whatever reason,

1 proves insufficient to resolve the matters at issue herein, then further examinations should be
2 performed once the SWRCB makes findings as to what “natural” waterways were in existence
3 during the time periods when Whitney’s patented lands were subdivided into their present
4 dimensions.)

5 **A. Whitney Retained The Pak And Young Parcel’s Riparian Rights To Middle River.**

6 As noted above, the land within the Pak & Young parcel was within the lands in the patent
7 from the State of California to Whitney and, hence, was at one time part of a considerably larger
8 parcel that abutted the banks of Middle River. (See deed and map at Pak & Young Exhibit 3B.)
9 By reviewing the County Assessor maps from 1876 through 1896, one can see at a glance how the
10 land within the Pak & Young parcel was initially separated from the banks of Middle River. (See
11 Pak & Young Exhibit 3H.)

12 The chain of conveyances leading to such separation begins as follows:

13 –State of California to Whitney, 11/24/1876 (Pak & Young Exhibit 3B);

14 –Whitney to M.C. Fisher, 12/12/1876 (Pak & Young Exhibit 3C);

15 –M.C. Fisher to The Glasgow California Land Company (Limited), 6/20/1877 (Pak &
16 Young Exhibit 3D.)

17 Thereafter, The Glasgow California Land Company, Limited (“Glasgow”) began to
18 separate its lands from the banks of Middle River. As can be seen by reviewing the County
19 Assessor maps from 1892 through 1896 (see Pak & Young Exhibit 3H), this separation began with
20 the conveyance of the lands to the west of the Honker Lake Cross Levee Slough to “Witter” and
21 ended with the conveyance of the lands to east of that slough and to the west of Duck Slough, to
22 Frank E. Lane on March 7, 1896. (Certified copies of the two deeds to Witter and the one deed to
23 Frank E. Lane which effectuated said separation are included as Exhibits to Pak & Young’s
24 Request for Official Notice being submitted concurrently herewith).

25 Because Glasgow’s March 7, 1896 conveyance to Frank E. Lane contains no expression
26 whatsoever that Glasgow intended to eliminate its riparian rights to divert from the banks of
27 Middle River, all of Glasgow’s retained lands, which included the Pak & Young parcel, retained
28 and preserved their riparian rights to divert from the banks of Middle River at the time those lands

1 were separated from those banks. (See *Murphy Slough, supra.*) Accordingly, from the time of that
2 conveyance forward, those rights remained “part and parcel” of those lands and could not be
3 severed via any further subdivisions of those lands. (See *Rancho Santa Margarita, Murphy Slough*
4 *Assn. and Strong* discussed above.)

5 **XVI. THE SWRCB’S GRANT OF THE MOTION TO STRIKE PORTIONS**
6 **OF CHRISTOPHER NEUDECK’S TESTIMONY IS INCORRECT.**

7 **A. All Of Christopher Neudeck’s Testimony Is Relevant To The Instant Proceedings.**

8 In the Hearing Officer’s ruling on evidentiary objections in the contemporaneous *Woods*
9 *Irrigation Company* CDO proceedings, dated July 19, 2010, entitled, “Woods Irrigation Company
10 Hearing Motions and Evidentiary Objections,” the Hearing Officer ruled that the following
11 portions of Christopher Neudeck’s testimony should be stricken from the record: (1) Attachment
12 Exhibit 3V to WIC Exhibit 4A (which is the same testimony included as part of Mussi Exhibit 3V
13 and Pak & Young Exhibit 3V); and (2) WIC Exhibit 4D (which is also the same testimony
14 included as part of Mussi Exhibit 3V and Pak & Young Exhibit 3V). The Hearing Officer’s basis
15 for striking those portions is as follows:

16 The portions of Mr. Neudeck's testimony that MID objects to in the current
17 proceeding are copies of Mr. Neudeck's testimony in a prior enforcement hearing
18 regarding Roberts Island properties, State Water Board Order WRO 2004-0004
19 (hereinafter "Phelps"). This evidence is presented solely to support the theory that
20 lands in the area have riparian water rights because the groundwater they overlie is
21 connected to the surface waters from which they are diverting, also known as the
22 "Delta Pool" theory. This theory was rejected in State Water Board's Phelps Order,
23 which was upheld on judicial review. (See *Phelps et. al. v. SWRCB* (Super. Ct.
24 Sacramento County, 2006, No. 04CS00368); *Phelps v. SWRCB* (2007) 157 Cal.
25 App. 4th 89.) Because a riparian water right cannot attach through groundwater,
26 this evidence is not relevant to the proceeding, and the motion to strike is granted on
27 that ground.

28 (*Id.* p. 3.) While it is Respondents’ understanding that the Hearing Officers in the Mussi and Pak
& Young CDO proceedings did *not* strike any portions of Mr. Neudeck’s testimony, Respondents
will nevertheless briefly explain the relevance to the instant proceedings of the portions of Mr.
Neudeck’s testimony which were stricken in the Woods IC CDO proceedings, and which are cited
to herein, and what the Superior and Appellate courts did and did not do in the *Phelps* litigation on
issues pertaining to that testimony.

1 **1. Neudeck’s Testimony Regarding The Connection Between The Groundwater**
2 **And Surface Water Is *Not* Presented Solely To Support The So-Called “Delta**
3 **Pool Theory.”**

4 At the outset, it should be noted that the theory addressed in the *Phelps* litigation is *not* the
5 so-called “Delta Pool” theory that Mr. Nomellini, Sr. has testified to at length in these proceedings.
6 Instead, the theory addressed in the *Phelps* litigation is the theory discussed at length herein that,
7 on account of the hydrological connection between the groundwater underlying the lands within
8 the Mussi and Pak & Young parcels and the nearby surface streams, the owner of such lands
9 should have the right to divert its fair share of that common supply directly from the surface
10 streams even if its lands do not abut those streams.

11 In any event, Mr. Neudeck’s testimony regarding the connection between the groundwater
12 and surface waters is relevant to many issues raised in the instant proceedings, in addition to the
13 “common underground/surface supply theory” that was raised in the *Phelps* litigation. Those other
14 issues include the following:

- 15 (1) The so-called “Delta Pool” theory that Mr. Nomellini, Sr. has testified to at length.
- 16 (2) The intent of the grantor and grantee, i.e., it is relevant to demonstrate that a grantor
17 could not physically cut off the grantee’s ability to receive surface water from the
18 nearby surface channels even if it wanted to, since those surface waters
19 continuously reach the grantee’s land from below the surface.
- 20 (3) In a similar vein, that connection is also relevant to demonstrate that the grantee’s
21 parcels are continuously *consuming* surface water from the surface channels, via
22 evapotranspiration from natural vegetation (weeds, trees, etc.) or even via
23 evaporation from bare soil, even if a grantee’s parcel is separated on the surface
24 from a surface channel—as discussed above, it is effectively impossible to terminate
25 that continuous consumption of surface water. As such, that continuous
26 consumption provides support to show that the parties to a grant did not intend to
27 terminate that consumption of surface water after said separation, and that the
28 parties had an understanding that such consumption would continue to occur
 following any particular separation. The situation is analogous to having hundreds

1 of underground pipelines feeding surface water to the grantee's lands 24 hours a
2 day, 365 days a year.

3 (4) This connection is also relevant, as it was in the *Phelps* case, to the determination of
4 "harm" caused by any alleged unlawful diversions. For example, as Mr. Neudeck
5 explains in his testimony: "Taking water from [the surface streams] is virtually the
6 same as [taking it from the underground]," and in either case "there would be no
7 difference in the amount of water available in the surrounding channels." (Pak &
8 Young Exhibit 3V, pp. 4-5; Mussi Exhibit 3V, pp. 4-5.)

9 (5) A final example is the relevance to the contention that, because of the direct
10 groundwater/surface water connection, more water would be consumptively used
11 via natural vegetation and evaporation in the absence of farming than with farming,
12 which goes to the issue of harm as well as to the wisdom of the SWRCB's focus on
13 aggressively scrutinizing the water rights in the Delta in lieu of focusing on areas
14 where curtailing water diversions would actually result in water savings.

15 **2. Respondents' "Common Underground/Surface Supply Theory" Was Not**
16 **Rejected By The Appellate Court.**

17 While it is seemingly true that the SWRCB and the *Superior* Court rejected the
18 *Phelps* Respondents' "common underground/surface supply theory," it is very clear that the
19 *Appellate* Court did not. The Appellate Court did not reach the merits of the issue and, instead,
20 simply stated that it deferred to the Superior Court's factual findings on the issue. (See *Phelps v.*
21 *State Water Resources Control Bd.* (2007) 157 Cal.App.4th 89, 116-118.) The real tragedy,
22 however, is that it is clear that the Superior Court did not make any factual findings at all on this
23 issue and ruled on the merits of the issue as a question of law. The Appellate Court therefore
24 mistakenly deferred to the Superior Court's factual findings on the issue when there were no such
25 factual findings.¹²

26 _____
27 ¹² The entirety of the Trial Court's ruling on this theory is as follows: "Petitioners do not
28 overcome the lack of solid, credible evidence to establish retained and preserved riparian rights by
their assertion of a riparian rights theory based on connections between groundwater flowing under
their parcels and the San Joaquin or Middle Rivers. By settled case law, any connections between

1 The “common underground/surface supply theory” which Respondents raised in the
2 *Phelps* litigation and are raising herein raises the following issue:

3 In *Anaheim Union Water Co. v. Fuller* (1907) 150 Cal. 327, this Court held
4 that a landowner with lands that overlie groundwater that is hydrologically
5 connected to a surface stream but whose lands are separated from the surface stream
6 on the surface does not have “the right to divert water from the surface stream,
7 conduct or transport it across intervening land to the tract thus separated from the
8 surface stream, and there apply it to use on the latter, to the injury of lands which
abut upon the proper banks of the surface stream” (Id., p. 332, emphasis
added.) Does such a landowner have such a right if there is no alleged, much less
actual, injury to any such lands or to any other water user with rights to that
common underground/surface water supply?

9 If the SWRCB or anyone else can point to where in the Appellate Court’s *Phelps* decision
10 the Appellate Court answered that question, then it is respectfully requested that they do so and that
11 they provide direct quotes. That issue is as alive and well now as it was during the *Phelps*
12 litigation. While the parties to the *Phelps* litigation are bound by the SWRCB and *Superior*
13 Court’s rulings via doctrines of collateral estoppel, res judicata and/or law of the case, etc., neither
14 *Mussi* nor *Pak & Young* were parties to those proceedings and are not so bound.

15 However, even if the Appellate Court did answer the above-referenced question, that would
16 still not be a valid basis to bar *Mussi* or *Pak & Young* from raising the issue in the instant
17 proceedings and providing evidentiary testimony in support thereof. All courts, even the Supreme
18 Court, and especially administrative tribunals such as the SWRCB, have the power to revisit prior
19 rulings, especially when there are different facts as there are in the instant case, but, even when the

20 _____
21 the groundwater and the rivers do not establish the contiguity between the parcels and the rivers
22 necessary to confer riparian rights to divert water from the river surfaces. (*Anaheim*
23 *Union Water co. v. Fuller* (1907) 150 Cal. 327, 332.) The cases on which petitioners rely for their
24 theory, *Hudson v. Daily* (1909) 156 Cal. 617 and *Turner v. James Canal* (1909) 155 Cal. 326, do
25 not depart from this holding of *Anaheim*. *Turner* does not involve an underground flow at all, and
26 *Hudson* merely recognizes that when groundwater flow underlying one property and a surface
27 stream abutting another property have a common water supply, the property owners have
28 correlative rights to the supply and must share it. (156 Cal. at 628.) *Hudson* does not hold that the
common water supply confers a riparian right to divert from the surface stream upon the property
overlying the groundwater flow.” (See “Ruling on Submitted Matter,” filed February 14, 2006,
Sacramento Superior Court, Case No. 04CS00368, pp. 9-10.) Where does the Superior Court state
that it rejects this theory because the Petitioners did not adequately establish the connection
between the groundwater and surface water or did not establish any other factual support for this
theory?

1 facts are the same, and overturn, modify or otherwise extend or curtail those prior rulings as
2 appropriate. The California Rules of Professional Conduct, for example, amply recognize this
3 essential ability to test the validity of various laws. (See e.g., Rule 3-210 [“A member may take
4 appropriate steps in good faith to test the validity of any law, rule, or ruling of a tribunal”]; and
5 Rule 3-200, with emphasis added [“A member shall not . . . present a claim or defense in litigation
6 that is not warranted under existing law, *unless it can be supported by a good faith argument for
7 an extension, modification, or reversal of such existing law*”].)

8 While the Appellate Court in the *Phelps* case did not answer the above-referenced question,
9 and it is Respondents’ contention that other cases *have* sufficiently answered it in Respondents’
10 favor, the most the Appellate Court in the *Phelps* case could be said to have done is defer to the
11 Superior Court’s *factual determinations* with respect to that issue. Sadly, as noted above, the
12 Superior Court did not make any such determinations. In any event, in the instant proceedings,
13 Respondents have submitted considerable additional evidence attesting to the well-recognized
14 connection between the groundwater and surface waters in the vicinity of the Mussi and Pak &
15 Young parcels and throughout the entire Delta and, therefore, to the extent the Appellate Court,
16 Superior Court and/or the SWRCB found that connection to be lacking in the *Phelps* case,
17 Respondents have attempted to correct any such deficiency in the instant proceedings and should
18 by no means be deprived of the opportunity to do so.^{13 14}

21
22 ¹³ See for example, the Testimony of Dante J. Nomellini, Sr. (Mussi Exhibit 9) and the
23 following exhibits: Mussi Exhibit 9E, “Estimation of Delta Island Diversions and Return Flows,
24 DWR, February 1995”; Mussi Exhibit 9F, “DWR’s January 30, 2009, letter to MWD, et al. re
25 proposed Delta Wetlands water transfer”; Mussi Exhibit 9G, “Excerpts from DWR’s 2009 Webb
26 Tract Transfer Pilot Study and Office Memos”; and Mussi Exhibit 9H, “Investigation of the
27 Sacramento-San Joaquin Delta Report No. 4, Quantity and Quality of Waters Applied to and
28 Drained From the Delta Lowlands, Department of Water Resources, July 1956.”

26 ¹⁴ The SWRCB did indeed challenge the sufficiency of the evidence regarding that
27 connection in the *Phelps* case. (See e.g., WRO 2004-0004, at p. 13, with emphasis added [“*In the*
28 *absence of other evidence*, the respondents’ factual contention [regarding so-called “underflow,”
which the SWRCB mistakenly assumed the instant theory relies on] is unfounded and provides no
support to the legal contention”].)

1 For all of these reasons, *all* of Mr. Neudeck's testimony is directly relevant and important
2 to the instant proceedings.

3 XVIII CONCLUSION

4 The evidence presented shows that the Mussi and Pak properties were originally swamp and
5 overflowed lands, which abutted Duck Slough both before and after reclamation of the surrounding
6 lands. This connection to Duck Slough continued on until at least 1928 (the date a court case
7 references the filling in a slough). Later evidence shows that portions of the slough were still in
8 existence until at least 1937 (the date of aerial photographs). During the relevant times (up through
9 1925) the record shows not only the connection to Duck Slough, but other interconnected water
10 sources which could only have been jointly used by local farmers to provide water to their crops.
11 Clearly the Pak property was riparian to Duck Slough up until it was benefitted by an agreement to
12 furnish water, and thereafter it established a new diversion point via the Woods Robinson Vasquez
13 system; all indicating the intent and actual preservation of a riparian right. The Mussi property was
14 also riparian to Duck Slough, and transitioned from use of that source, to Woods Irrigation
15 Company, finally to the Woods Robinson Vasquez system; all indicating the intent and actual
16 preservation of a riparian right.

17 Further, the relevant deeds preserved the riparian status of the lands, and use of water since
18 1914, indicating a prima facie case of pre-1914 rights have been shown. For these, the other
19 argument and legal citations set forth hereinabove, no CDO should issue against Mussi or Pak.

PROOF OF PERSONAL SERVICE

STATE OF CALIFORNIA)
County of San Joaquin) ss.

I am a citizen of the United States and a resident of the County of San Joaquin. My business name is Service First, and my business address is Post Office Box 2257, Stockton, California, 95212. I am over the age of eighteen years and not a party to the within entitled action.

On August 30, 2010, I hand delivered the original and five copies of **RUDY MUSSI, TONI MUSSI, AND LORY C. MUSSI INVESTMENT LP/YONG PAK AND SUN YOUNG/SOUTH DELTA WATER AGENCY/CENTRAL DELTA WATER AGENCY JOINT CLOSING BRIEF** to the State Water Resources Control Board, by hand delivering true copies thereof to the person at the front desk of the SWRCB for delivery on the SWRCB at approximately 4:15 p.m.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct.

EXECUTED on August 30, 2010, at Stockton, California.

Patrick Burnett
