to whom it may concern

as property owners at the sea ranch california, we have concerns about the staff recommendation about the Gualala river. we have concerns that these recommendations were made without looking specifically at the Sea Ranch and it's relationship with the Gualala river. The Sea Ranch has a very strong water conservation policy already in force, and we have a very low gallons per day per capita water usage history.

we ask that you please not adopt the policy in it's present form without revisions that would help the residents at The Sea Ranch. The policy as proposed would serevly affect our access to water and could greatly decrease our property values.
please reconsider you policy.

thank you
