Subject: AB 2121 Question

To: State Water Resources Control Board Members

Please explain how AB 2121 will affect The Sea Ranch water supply from the Gualala River? Under this bill will we be able to continue to use our wells, which are approximately 100 feet down into an "extremely large aquifer" in the river, to get all the water we need? What provisions are in the bill to make sure the people who already live here on the coast get adequate water? I find it hard to believe that the state would consider the salmon before the human need. It makes no sense to me that an agency that I pay taxes for would not first take into consideration the basic needs of the community. We have always used water responsibly and sparingly. How can you decide to just turn our water source off?

I just think that I may have missed something in reading the bill. It is a complicated subject.

Your response will be appreciated.

Sincerely,

Susan Grenwelge
