

WATER SUPPLY AND DEMAND MODELING IN THE BUTTE CREEK WATERSHED

CHICO BRANCH LIBRARY MEETING ROOM

1108 Sherman Avenue | Chico, California 95926

Tuesday, November 19, 2024 | 4:00–5:00 pm

The State Water Board is developing water supply models that assess surface water availability in select watersheds. The models will help local communities better plan for and address water shortage conditions that may threaten water supplies, impair critical habitats, and create uncertainty for water users. Board staff will present information on the status of this work in the Butte Creek watershed and be available to answer questions.
