Subject: Thermal curtain lake Almanor

Mr. Barnes. Hello, and thank you for accepting public comment. My family has owned a summer cabin in prattville since 1962. So much has changed concerning environmental issues in the lake Almanor area in recent years. Please let this email serve as notice for myself and my families strong opposition to a thermal curtain in any lake in the lake Almanor area. I feel there must be some other option that taking cold water out of the lake and shoving it downstream, isn't this what they call robbing peter to pay paul (no pun to your name intended.) We are extremely concerned about any impact this project would have on the lake, and any effect to property values in the area.

The state has been, in my opinion, inundated with misguided approaches to problems guided by junk science. I will not bore you with examples like the California air resources board. We humans have a bad habit of fouling up anything we touch in the natural world, and this project would be no exception.

In closing, we again wish to STRONGLY oppose the thermal curtains in the Lake Almanor area.
