Subject: Lake Almanor Draft EIR

Please add my comments to the draft EIR. I contest the validity of the document on the basis of insufficient biological study. The draft EIR must have significant scientific study. This document is woefully incomplete. The highest level of review (EIR) required by the California Environment Quality Act requires complete scientific data.

Current scientific research is necessary before this document can be certified. The data must quantify and qualify the impacts to Lake Almanor from installing thermal curtains and removing cold water. The examination of the effects of increased water temperature and global warming must be included in the review.

"No significant impacts" is impossible to state without significant biological study to understand the impacts to the lakes cold water fishery.

Please add this email to the record

Sincerely

Steve Hammack
