**Subject:** Thermal Curtain Lake Almanor

Mr.Barnes,The idea to very probably damage the fishery of Lake Almanor,for a perhaps benefit down stream is a classic cost/benefit equation.Cost for the Almanor basin and minor,if any,benefit for the down stream fishery.

The town of Chester depends on recreation for it's economic engine,a large part of that is derived from fishing,the economics directly benefiting all aspects of the community.

I am a member of the Almanor Fishing Association and as such we raise fifty thousand fish annually and release them into the lake from our cages,where they are fed during the fall,winter and early spring.Our organization is very cognizant of the damage the thermal curtain would do to the fishery,not to mention being contrary to the will of the people of this basin.Thank you for you consideration.Regards/Mac Hinman
