Subject: Concern about Draft EIR for Lake Almanor

Mr. Barnes,

I want to express my concern about the construction of Thermal Curtains at Prattville in Lake Almanor. It is unreasonable to assert that there will be “no significant impact” when the lake would be modified without the research to demonstrate the impact. Shifting the structure of the lake to resolve a problem elsewhere only moves the issue from one area to another. This body of water is much larger than the water in the areas to be “rectified” and the resulting problem will be much greater than the solution to the original problem.

My husband and I are strongly objecting to this solution.
