Subject: NO THERMAL CURTAIN FOR LAKE ALMANOR

I'm writing to strongly oppose the State Water Resources Control Boards Draft EIR that supports installing a Thermal Curtain at Lake Almanor !

The excessive cost, ecological destruction to the Lake's fish and probable increased algae damage for a Very marginal benefit far downstream is both extremely bad economically and an environmental travesty !!

With all the hysteria over climate change today, increasing Lake Almanor' temperature by draining the Lake's cold water for any questionable improvement is completely contrary to good common sense; there just has to be a better solution !!!
