**Subject:** Save Lake Almanor!

Mr. Barnes:

Coupled with the current extended drought which could become the "norm" rather than the "occasional," intentionally increasing the water temperature of Lake Almanor can only result in a negative impact to the lake and it's surrounding area. We already experience a very high and extended algae bloom which impacts water quality and certainly has impacts on both fish and humans.

Warming water for a bath is sensible, but intentionally warming a lake makes no sense.

Ron R. Piret
