Peter Barnes, Engineering Geologist

State Water Resources Control Board

Division of Water Rights, Water Quality Certification Program

P.O. Box 2000

Sacramento, CA 95812-2000

Mr. Barnes,

We own property on Lake Almanor.

I am writing you to express my opinion that I am opposed to the Water Boards staff recommendations in the Draft EIR.

The Draft EIR clearly didn't understand the potential devastation to Lake Almanor by removing cold water. Where is environment justice in damaging one area for the very questionable potential benefit of another?--there are no anadromous fish below the dam--there would be a much much greater environmental impact at Lake Almanor than below the dam

There is no doubt the recommendations would clearly effect our fisheries and to suggest planting fish as a solution is unacceptable. Why not just plant the fish downstream? Isn't that the fishery in question now?

None of the recommendations pass any type of “reasonable” that the State Water Resources Control Board was asked to determine. Therefore, none should be utilized. Lake Almanor does not have enough cold water to share. Not a drop should be removed.

Sincerely,

Casey Safreno
