Mr Barnes, I really
feel it is insane to
spend money on a thermal
curtain which will certainly
ruin a lake. I can't
imagine fishermen
would want to ruin
a lake? If it only
charges streams 1%
this won't make enough
of a charge to make
fishing better. Our
lake is too small for this crazy idea

Thank you for coming to Chester
last night. I am a native Californian
and love the utilization of our resources
for power generation and the resulting
recreation opportunities.

I think we have a good thing
going in this state.

I can live with the temperature
impairment of the Feather River because there are always
ecological impacts from energy generation - these
degrees of impact seem reasonable. The impacts of
the staff recommendations seem to be very unreasonable
and in direct conflict with the 2004 agreement

Plumas Audubon Society along with California Audubon has been studying western and Clark's Grebes nesting at Lake Almanor. Results show that water-level drop can cause nesting failure. This is the second largest grebe nesting colony in California. Water management policy under all alternatives should protect the stability of water levels during the grebe nesting period.
