Subject: Cold water release from Lake Almanor.

Lake Almanor is having enough problems with the drought, bacterial load, and unemployment in the area for PG&E to add another burden upon the residents and property owners in the area. The temperature should be kept colder instead of raising it. I have been in the area since 1960 and have seen the stumps removed, water level raised and recreation areas added. I have been a customer of PG&E for 60 years and have considered it to be a excellent company. Please drop all plans to take cold water from the lake and instead help the local residents and vacationers to have recreation on a cold water lake.
