Attn: Peter Barnes

PB  
FERC 2105

Realizing Calif govt.  
has a record & long  
history of slow to  
no economic  
stability, & nevertheless  
pause to consider the  
Lake Almanor FERC  
2105 issues that are  
unresolved & unresolvable.

Ship LRAI cold  
water down to the hotter  
valley watersheds.

Disregard costs,  
including profits & losses,  
& ignore & set aside  
citizen concerns &  
make govt. employees

~~same~~ jobs easier & more lucrative. & ensure those ~~not~~ not invested are benefitted.

Ultimately, provide nature a chance, which it will get anyway, to rectify California's water issues!

Lake Lake Almanor, an artificial lake, its dams & power houses make them unhealthy and ugly at the top of the watershed & send the muck downstream.

Use up our artificial resources til they rot.

(3)

And in the long term,  
let us ~~all~~ <sup>have</sup> ~~gone~~ little  
to no cognitive  
relationship with our  
current relative  
reality.

Yours sincerely,  
Marian Fiddell

P.S. Thanks for your time  
to read this. Hope you  
enjoyed it. I'm going  
back to my waterless  
relandscaping project.
